- No. 65. . . Copy of an Agreement between the Inspector of Prisons and Public Charities and P. L. O'Connor, relative to the manufacture of binder twine at the Central Prison. Also, of Order in Council approved by His Honour the Lieutenant-Governor on the 1st day of October, 1895, authorizing the said Agreement. Presented to the Legislature 11th March, 1896. (*Printed.*)
- No. 66. . . Copy of an Order in Council, approved by His Honour the Lieutenant-Governor the 10th day of March, 1896, fixing the amount to be paid to His Honour Judge Elliott, Junior Judge of the County of Middlesex, out of the surplus Surrogate fees for the year 1895. Presented to the Legislature 13th March, 1896. (*Not printed.*)
- No. 67. . . Return to an Order of the House of the Sixth day of March, 1896, for a Return shewing the cost of the machinery, the cost of repairing and maintaining the same in order, and the cost of raw material used in connection with the manufacture of binder twine in the Central Prison, giving the aggregate amounts for each year from the beginning of the said industry to date; the amounts annually paid as commissions for the sale of the product; the cost of packages, freight, salaries of extra officials and all other expenditures incurred in connection with or occasioned by the said manufacture. The annual receipts from sales of binder twine during the said period, and the estimated value of the machinery, plant, material and stock on hand when the said industry was transferred to its present managers. Presented to the Legislature 13th March, 1896. Mr. *Haycock*. (*Printed.*)

- No. 68. . Return to an Order of the House, of the Twenty fifth day of March, 1895, for a Return shewing the municipal indebtedness of the various municipalities of the Province on the 31st December, 1894, under the following heads :—
1. Roads and bridges.
 2. Railway bonuses.
 3. Aid to manufactures by way of bonus.
 4. Municipal waterworks.
 5. Waterworks belonging to companies.
 6. Gas and electricity.
 7. High and Public Schools.
 8. Sewers.
 9. Other purposes.
 10. Also shewing any debenture debt for local improvements, not above included. Presented to the Legislature 23rd March, 1896. Mr. *Gibson (Huron.) (Printed.)*
- No. 69. . Return to an Order of the House, of the Fourth day of March, 1896, for a Return of copies of all correspondence, documents and writings between any Member of the Government, or between any person or persons and the Government, in connection with the recent charges made by James Massie, late Warden of the Central Prison, against certain of the officials of the Prison. Also, for copies of the Commission, or other appointment, and the instructions given to the Commissioners who investigated the charges. Also, for a copy of all evidence taken before the Commissioners at the investigation, and of the report made thereon by the Commissioners. Presented to the Legislature 23rd March, 1896. Mr. *Marter.* (*Not printed.*)
- No. 70. . Return to an Order of the House, of the Twenty-sixth day of February, 1896, for a Return of copies of all correspondence between any official of the Corporation of the City of Hamilton and the Department of Crown Lands, or any officer thereof, relating to any question affecting the rights of the City of Hamilton, or any person or persons, to certain portions of Burlington Beach ; also, for a copy of any instructions given to S. H. Jones, Esquire, P. L. S., as to defining the limits of any holding either leased to the City of Hamilton, or sold to any individual occupant ; also, for a copy of plan of survey made by Mr. Jones ; also, for a copy of the original, as well as the subsidiary lease, granted to the City of Hamilton by the Department of Crown Lands. Presented to the Legislature 24th March, 1896. Mr. *Dickenson.* (*Not printed.*)
- No. 71... Copy of an Order in Council, approved by His Honour the Lieutenant-Governor, the 26th day of March, A.D. 1896, approving of the accompanying Agreement between the Canada Publishing Company (Limited), Publishers, of the City of Toronto, and Her Majesty the Queen, represented by the Minister of Education for the Province, on behalf of the Educational Department of Ontario, respecting the publication of "The Public School Writing Course, Vertical System," comprising seven separate books, for use in the Public Schools of Ontario. COMMISSION.

Whereas the Board of Separate School Trustees for the City of Ottawa has asked for a Commission to examine and report upon the condition of the Separate Schools in the City of Ottawa, and also to enquire into the charges made against Mr. Inspector White by the Rev. Mr. Flamien representing the Christian Brothers ;

And whereas it is desirable in the public interest that such Commission should be issued ;

Therefore, know all ye to whom these presents shall come, that I, George William Ross, Minister of Education, have hereby appointed the Rev. J. T. Foley, the holder of a Provincial Certificate as a Public School teacher ; D. Chenay, Principal of the Training School for French and English teachers in the County of Prescott, and William Scott, B.A., Vice-Principal of the Toronto Normal School, Commissioners to visit the Separate Schools of the City of Ottawa for the purpose of making full and careful inquiry by personal inspection, and any other way they may deem expedient, into the methods of teaching in the said schools, the training of pupils in the various subjects prescribed in the course of study, the text books used by the pupils and the extent to which the English language is taught in the schools where the French language prevails.

The said Commissioners are also authorized and directed to enquire into all matters referred to in the official statements of Inspector White hereto annexed ; and in conducting the said enquiry the said Commissioners are hereby empowered to exercise such jurisdiction during their personal inspection of the schools and otherwise, as is conferred upon Public School Inspectors under regulation 80 of the Education Department.

GEO. W. ROSS,

Minister of Education.

OFFICIAL STATEMENTS OF INSPECTOR WHITE.

The following are the official statements of Mr. Inspector White referred to in the Commission.

OTTAWA SEPARATE SCHOOLS—FRENCH SECTION.

Special Report, J. F. White, Inspector Separate Schools.

1. There are too frequent changes of teachers. Where a teacher is succeeding well with a class there should be no change from year to year.

2. In the lowest classes there are many pupils of rather advanced age for such divisions. This is said to be owing to a lack of accommodation, so that pupils have to wait till they are six or seven before they can be admitted. It was said that many children from St. Joseph's parish and from Primrose Hill are unable to gain admittance to school.

3. The Board should sanction some uniform limit table so that the same grade of the different schools, whether for boys or for girls, should do similar work. At present there is no attempt to secure such uniformity.

4. During each school term there should be written examinations on all, or on the most important, subjects of the course, uniform for the same grade of boys' and girls' classes. These would test the progress of the several classes, and should be made the basis of promotion, in part.

5. To avoid misunderstandings, the control of such examinations should not be left to the teachers, but confided to some committee appointed by the trustees.

6. By the Regulations of the Education Department, English is to be taught in every class and to all the pupils in the class. There is considerable room for improvement in this [latter] respect.

7. In the girls' classes there is fair provision for English teaching by having the three Sisters now in charge of the subject devote their whole time to it. But in the boys' classes the provision is quite inadequate. La Salle and St. Jean Baptiste schools, with a total staff of seventeen, have no English teacher. There is one in Brebeuf; but, being teacher of the highest department, he has not time enough to devote to English teaching. Few of the regular teachers of these classes have a wide enough acquaintance with English to teach it properly. In these circumstances I advise the engagement of at least three Brothers whose whole time may be devoted to the proper teaching of English in the above mentioned schools.

8. In many cases the pupils have too many text-books,—entailing a needless expense on parents and not encouraging good teaching. I would advise the Board to get from each teacher under its control a list of the books used in his or her department, and strike off such as are unnecessary, giving proper notice of their discontinuance. If the list is submitted to me I shall be glad to assist in this work.

9. The De la Salle series of English readers should be changed as being quite unsuitable for the purpose for which they are now used. Should they be continued in the schools after September next, it would be my duty to report publicly against them.

10. Such books as "Devoir du Chretien," "Cours d'Histoire," and "Les Manuscrits," though thoroughly Catholic in tone and of use in their place, are not suitable books from which to teach Reading, and should be changed. So also should the Latin Psalms. The school law requires the trustees of urban schools to have pupils supplied with uniform books.

11. In general the pupils of the junior classes are weak, and far below the standard. Instead of beginning Writing, Drawing and Arithmetic in the lowest class, they have sometimes been delayed till the pupil has reached the second or third teacher. The yearly returns for 1890—the latest to hand—show that 500 children in the Ottawa Separate Schools are not learning Writing or Drawing, and a good number not taking Arithmetic.

12. The writing of French is delayed too long, and the result is, as shown by the written exercises given to me, that a very small proportion of the pupils leave school with the ability to speak and write French correctly. As soon as a child is able to write, and this should be learned pretty fairly in the first year, he should be led to express his thoughts in writing. With proper teaching, no French child should leave school, after an attendance of almost six years, without being able to express himself in speaking without serious mistakes, and without being able to write correctly at least an ordinary friendly or business letter. At present this is far from being the case.

13. There should be a new building for Ste. Anne's as soon as possible. Guigues school is not very convenient or comfortable, and the classes in the second flat seem to be in danger in case of any panic. The same is true of St. Jean Baptiste school, where the accommodation of two narrow stairways is altogether inadequate should any alarm occur.

14. There should be some endeavor to improve the lighting and ventilation of such schools as La Salle and St. Jean Baptiste, where in some rooms the provisions are very inadequate.

15. There should be sufficient closet accommodation, and suitable and regular provision for disinfecting, especially in summer. In La Salle this requires immediate attention.

16. The hours for assembling and dismissing classes should be the same for all schools, viz., 9 to 12 a.m.; 1.30 to 4 p.m. The attendance of pupils at 8.15 a.m. cannot be exacted, though tried in some schools. There is a good deal of dilatoriness at present.

17. The percentage of attendance is declining. In 1888 it was 60; in 1889, 58; in 1890, 56. This matter is most important and should receive careful attention.

January, 1892.

(Copy).

TORONTO, 26th May, 1894.

DEAR SIR,—The promised report on text-books was made over a month ago, and sent to the Department to be posted. On receiving your letter on my return home I found that through some oversight it had not been forwarded to you. Regretting the delay, I remain,

Your obedient servant,
(Signed) J. F. WHITE.

G. W. SEGUIN,
Ottawa.

(Copy).

TORONTO, April 25th, 1894.

DEAR SIR,—I have the honour to send you herewith a report on the text-books used in the schools under the control of your committee. While the criticisms deal chiefly with the defects of the books it must in fairness be said that many of them have very good points as well, but mention has been made only of matters that, in my opinion, need improvement.

The first pages are a copy of a report on the De la Salle English Readers made some time ago by a committee named by the Ottawa Separate School Board. The remainder of the report is my own.

Your obedient servant,
(Signed) J. F. WHITE.

G. W. SEGUIN, Esq.,
Chairman French Committee,
Separate School Board,
Ottawa.

EXTRACT FROM REPORT OF A COMMITTEE APPOINTED BY THE OTTAWA SCHOOL BOARD TO
EXAMINE READERS AND OTHER TEXT-BOOKS.

"Beginning with the primary books of the De la Salle series we found that the picture-and-word method was deficient both in arrangement and in the selection of the words, which were in many cases too difficult and unfamiliar. In the reader proper the lessons are not well graded and the selection of subjects is poor. Such subjects as "Providence," "Obedience," the "Theatre" and "The Church" are unsuitable for pupils beginning to read. The sentences as a rule are without connection and logical sequence, and would prevent anything like naturalness in reading. The want of unity and of a leading thought in each lesson at once destroys the interest of the pupil. There are few pictures to please the little fellows, and the lessons are not based on the pictures, as in the best primary readers, but consist of such disjointed statements as these: "What way is far? I ask a tent. Spare the hen. Spare men the task. Ask a man. May was home, etc.

"The printing, paper and illustrations are wretched and the plan of binding together the first and second parts is not a good one as it makes these primary books, which are so liable to get destroyed, much more expensive.

"On the whole we consider that the primary reader of the De la Salle series has no redeeming features. The elementary reader of this series is in many cases poor in style, and several inaccuracies occur; but on the whole it is much better than the primary.

"The language lessons of the De la Salle series are considered too difficult for elementary classes, and there is too much formal grammar mixed up with the language lessons."

Geography. In this subject the primary text-book could well be omitted, since the classes in which it is used can have the matter suitable for their grade presented in much better form by a competent teacher when left untrammelled by a text-book. The intermediate book of the series (the one found in all or nearly all of the schools) should be revised to date and somewhat enlarged, to give considerably more information about Canada and each of the leading provinces. Its price—50 cents—is moderate, and when thus improved the book should serve pupils until they reach the fifth form.

Arithmetic. The Calcul appears to be less commonly used than it formerly was, but it might be dispensed with entirely. The mechanical exercises of which it consists are of value chiefly when done under the eye of a teacher who will see that only good methods are followed. It is evident, for example, if the correct answer to the sum of a column of figures is obtained by counting on the fingers or by using other improper methods, that the work has not been of much service to the child.

The *Cours Moyen* of the present series, if somewhat improved and enlarged so as to contain all the tables commonly used in Canada, and to give more exercises on measurements (carpeting, papering, etc.) and ordinary commercial transactions, would serve pupils to the end of their course and would be the only book used in this subject. The book need not be much increased in size, for some of the present material could be omitted. The English Arithmetic which covers all this ground is sold for 25 cents; the price of *Cours Moyen* when the book is changed should not exceed 30 or 35 cents. If necessary a separate treatise could be used for book-keeping.

History. The History of Canada used in all the schools, though good in several respects, contains too little material. It should be at least one-half larger, and without increase in the price. One of the text-books on English History found in the girls' classes could be dropped; the other book would probably be found sufficient.

Composition. This subject should depend chiefly upon suitable work to be assigned by the teacher, and but little upon a book in the hands of the pupil. It is probable that such a change could easily be brought about.

English. As it is a knowledge of ordinary colloquial English that is of the highest value, particularly in the beginning, the success of teaching it depends but little upon a text-book and nearly altogether upon the teacher, who should be able to speak the language with some degree of fluency and correctness.

I have discussed with the teachers the best means of presenting this subject to young children, showing how the exercises are to be given orally and without a book. The present text-book could therefore be discarded in all the lower grades. To make it suitable for the senior classes it will have to be considerably changed both in form and material. For English Grammar the text-book should not be introduced in any grade where a fair knowledge of spoken English has not been acquired. An outline in a clear simple form of the chief points of our grammar would in my opinion be better for the purpose than the present text-book. In several cases the text-books are introduced at too early a stage. Usually it is recommended in the English classes that no text-book in Arithmetic be placed in the child's hand until he has reached a senior second or a junior third class. The text-books in Geography, History and Grammar are first introduced in a senior third form. The adoption of a similar limit for the introduction of books in your schools should result in a considerable benefit. From the reports sent me by the teachers it would appear that there is not a uniform price charged in all schools for the same text-book. While the difference is but small in most cases yet it would be better to arrange for uniformity in this respect and to have the price as low as is consistent with a fair profit. The mechanical execution of certain of the books is open to criticism, the printing being blurred or the engraving not in the highest style of art. Most of the books have only board covers that are likely not to last very long and thus to entail expense by having the book replaced. The Board might properly make representation on these points to the publishers.

Though the teachers made no mention of copy or drawing books, I have reason to believe that their cost is greater than for similar books in English schools. At present the drawing books for Public Schools retail at 5 cents a number, while copy-books, now 6 cents will be but 5 cents after July of this year. There are no head-lines or models to be used outside the books, so that the cost is very reasonable.

It is quite likely that a reduction of prices in such books used in French classes could be brought about if the Board would take the matter in hand.

Your obedient servant,

(Signed) J. F. WHITE.

G. W. SEGUIN, Esq.

Chairman, French Committee,
Separate School Board,
Ottawa.

(Copy.)

TORONTO, 27th July, 1894.

DEAR SIR,—Herewith I send as requested a list of books whose use is recommended for all the schools under the direction of your Committee. In having the text-books uniform for all the schools you not only comply with the provisions of the school law, but at the same time you effect a considerable saving to parents—a matter worthy of your earnest consideration.

The list of books here given corresponds in general to those used in the several grades of English schools throughout the Province. The science of education clearly shows, and experience fully proves, that in limiting the number of text-books to the fewest required, the great resulting benefit is that gained by the child from the improvement in the character of the teaching. This is more especially true of the junior classes, because young children can gain but little from a text-book and must depend nearly altogether upon the teacher. Besides no true teacher can expect to show the best results when he is

so hampered in his efforts by a multiplicity of text books whose method and order he feels himself constrained to follow even against his better judgment.

After an examination of the text-books now in use I would recommend the adoption of the following in all the schools :

French Readers—Montpetit series.

English Readers—Sadlier's.

Arithmetic—Cours Moyen, Christian Brothers.

Geography—do do

Canadian History—Christian Brothers.

Grammar—Cours Moyen, Larousse.

English Grammar—Public School.

French-English Dictionary—Routledge.

Copy Books—Public School.

Drawing Books—Public School.

French Readers. The series recommended is the one in general use in the French Separate Schools of this Province. Though not an ideal series it has many points of superiority over the one in the boys' classes. There is a great need, however, of a suitable primer based on the phonic method, for the lowest book in each series is too difficult, and is not on the best lines for good teaching.

English Readers. The defects of the De la Salle series were previously brought to the notice of your Committee. These books are used in only four schools in the city. The series recommended is the one in general use in the Ottawa Separate Schools.

Arithmetic. As before pointed out, the best results are obtained when the teaching in the lower grades is oral or from the blackboard. The use of a book at this stage serves rather to hinder than to help the pupil. Accordingly I have recommended the book to be used first in Form III. But something may be left to the teacher's discretion, and if he has a well advanced Senior II. Form the book might be introduced then with advantage.

It should be thoroughly understood, though, that not more than one text-book should be used to the end of the IV. Form. In the English schools throughout the Province, one text-book, costing 25 cents, serves to the end of the V. Form. As stated in another report, it will be necessary to make certain changes in the Cours Moyen, to render the book a suitable one for the work to be done in these forms. These changes are needed not only for our schools in this Province, but even to make it thoroughly serviceable for the pupils in any Canadian school.

Geography. The one book recommended for this subject is the Cours Moyen of the Christian Brothers. But as stated in regard to the arithmetic, certain changes are needed in this book to bring it up to the requirements of Canadian schools. Even a cursory examination of this text-book will show in what respects it is defective ; but should any special report on these points be required by the Board I shall be glad to furnish details.

Canadian History. The book recommended is the one in general use in the classes, but as already stated it contains insufficient matter. The Public School History of England and Canada, which is better bound and contains five or six times as much printed matter, is sold for the same price, viz., 30 cents. It is therefore not an unreasonable request to ask for a fuller book at the present price.

Grammar (French). There should be considerable oral teaching in this important subject before the child is required to use the text-book. The teachers have been strongly advised to take up French spelling almost from the first ; in the beginning by transcription and blackboard teaching, and afterwards by dictation. Since an acquaintance with French Grammar is requisite for correct spelling, they have been recommended to take up this subject at as early a period as possible, but without the child having any book. The most effective teaching of the first essentials of the subject is by oral lessons, illustrated on the blackboard. The text-book is to be begun only in the III. Form.

One weighty reason, among others, for recommending the Cours Moyen of Larousse as the best of these now in the schools, is that its use will enable the pupils to dispense

with the buying of the two books of "exercises orthographiques" now found in the boys' classes. Larousse's book contains a large number of exercises; the reading and other text-books will furnish others, and the teachers may have additional material, but it is not requisite that pupils should purchase other books. For parsing and analysis no special text-book is required. Roberts' is the only French Grammar authorized by the Department. It is used in many schools in Eastern Ontario, and is, I believe, found a very satisfactory book. The price is 25 cents. If the Committee think of adopting a different book from any now found in the classes I would recommend their examining this one.

English Grammar. The English Public School Grammar, the one in use in most of the Separate Schools, should be the only text-book in this subject. The most important parts of this subject can be taught without a text-book, consequently I have not recommended its introduction before the IV. Form. It may however be left to the teacher's discretion to introduce it in Form III., if the class is properly prepared for it.

French-English Dictionary. Routledge's is the one recommended, in part because its cost (40 cents) is only one-half that of a text-book used in several schools, but which is not superior on the whole.

Writing. The Public School copies, the series used generally throughout the Province, and in most of the Ottawa Separate Schools, should be the sole one used, first because it is better than the other series; secondly, because it is cheaper, the price per number being only 5 cents in comparison with other series at 10 cents.

Drawing. The Public School Drawing Course should be the only one in use. There is no extra expense for models, as they are printed in the book. Each number retails for 5 cents.

The following list gives the cost of the text-books for a pupil in English schools up to the IV. Form, inclusive, in the subjects already mentioned. As the books are strongly bound, he rarely has to buy a second copy of any text-book.

First Reader, Part I.....	10 cents.
" Part II	15 "
Second Reader	25 "
Third "	35 "
Fourth "	50 "
	\$1 35 cents.
Public School Arithmetic.....	25 "
" Geography	75 "
" Grammar	25 "
" History of England and Canada	30 "
	\$2 90 "

Public School Drawing, each 5 cents; Writing, each 5 cents.

In the interests both of the parents and pupils I think it would be quite within the province of the Committee to represent to the several publishers of these books the need of having the best, both as to matter and workmanship. An examination of the books now in use will show the advisability of taking such action.

If the Committee can come to an agreement in good time it will be a considerable saving to the parents of these pupils, who on account of promotion require to purchase new books, to have to buy only as few as possible, and these of the series to be used in all the schools.

Your obedient servant,

(Signed) J. F. WHITE.

G. W. SEGUIN, Esq.,
Chairman, French Committee,
Separate School Board,
Ottawa.

LIST OF TEXT-BOOKS RECOMMENDED FOR THE FRENCH CLASSES, OTTAWA.

Form I (Lowest.)	Form II.	Form III.	Form IV.
Slate and pencil. Premier Livre 13 cts.	Slate and pencil. Scribbling book. Copy book 5 cts. Drawing book 5 “ Deuxieme Livre 20 “ English Primers, (Part I., Jr.) 7 “ (Part II, Sr.) 10 “	Scribbling book. Copy book..... 5 cts. Drawing book 5 “ Troisieme Livre 25 “ English Second Reader..... 25 “ Arithmetic 35 “ Grammar 30 “ Geography 50 “ Canadian History 30 “ <i>At the teacher's discretion.</i> French-English Dictionary ... 40 cts. English Grammar 25 “	Scribbling book. Copy book, ... 5 cts. Drawing book 5 “ Quatrieme Livre..... 40 “ English Third Reader..... 35 “ Arithmetic (as for III Form) .. 35 “ Grammar “ “ .. 30 “ Geography “ “ .. 50 “ History “ “ .. 30 “ English Grammar “ .. 25 “ French-English Dictionary..... 40 “ <i>At the teacher's discretion.</i> Histoire d' Angleterre 25 cts. Mental Arithmetic.

NOTE.—As the matter does not fall within my province, I have recommended no books on religious subjects.

OTTAWA SEPARATE SCHOOL BOARD—FRENCH SECTION.

1. Teachers are changed too frequently to the great detriment of the classes.
2. There should be uniform hours for assembling and dismissing the classes. Teachers have no authority to assemble pupils before 9 a.m. All schools should open at 9 a.m. and close at 12 noon; the afternoon session being from 1.30 to 4. Where different hours are kept in the boys' divisions it may be for the convenience of the teachers but certainly it is not for the benefit of the school. The morning session is the more important, for the pupils are then in the best condition to work. Consequently it is a generally observed custom to have the morning session the longer one with the most difficult subjects taken up. The reverse of this prevails in most of the boys' classes, though the teachers were recommended to change. To this difference in school hours is probably attributable some of the dilatoriness now existing. Besides, it interferes with the convenience of the family when the children return for dinner, to require the boys to leave half an hour before the girls.
3. There should be uniformity in the studies of the same grade in boys' and in girls' classes. The programme of studies authorized for Separate Schools is the one that should be followed by all the teachers under the control of the Board. No teacher or body of teachers is authorized to frame a course to be followed by pupils under their management unless it agrees substantially with that mentioned above.
4. As noted in a previous report there is urgent need of uniform examinations conducted by competent persons appointed by the Board. This would show to some extent the standing and the progress of the different classes, and the results should be taken into account in making promotions.
5. The study of English has made very satisfactory progress in the girls' divisions, where the teaching has been thorough and systematic under capable teachers specially charged with this duty. Though some progress has been made in the boys' schools, their standing in this subject is not equal to that of the girls. It is of the highest importance that on leaving your schools every boy should be able to speak, read and write English with some degree of thoroughness. Lacking this ability he would be greatly handicapped in making his way in this Province. It is the plain duty of the Board, then, to see not only that English is taught to every child, as is now I believe the case, but also that in this important subject as good provision is made for the boys as now exists for the girls.
6. As formerly pointed out to your Committee there is urgent necessity for action in the matter of text books. At the request of certain of your members I sent reports on this subject showing (a) that there are too many books; (b) that the cost is great; (c) that some books need a thorough revision; (d) that there is no uniformity. The Board should see that these matters are set right without unnecessary delay. Elected as guardians of the parents' interests they are bound to see that the books are quite suitable and the cost not unreasonable. But the children suffer more from this evil than do their parents in their monetary loss. Too many books, or books of a poor kind, must sadly interfere with good teaching. The School Law deals with this matter chiefly as to the question of uniformity. The Board has already been given due notice and ample time in which to make the requisite changes. Should it not take action it will be the Inspector's duty on his next visit to recommend the withholding of the Legislative grant until the matter is set right.
7. In written French there has been an improvement since the date of my last report. The standing varies, however, in the different schools, as an examination of the marking will show, and in some instances there is still room for better work.
8. From the accompanying reports of attendance it will be seen that a considerable number of children start school life at a somewhat advanced age. When it is considered that few, comparatively, remain after the age of fourteen, it will easily be seen how important it is that school attendance should begin early. A child whose school education has

extended over only five years, or even less, must afterwards compete at a terrible disadvantage in most pursuits with those who have received a thorough school training. A comparison of the returns shows that as a rule the girls have begun school earlier than the boys; of the former over 33 per cent. of the total number registered, in all but Youville school, were from 5 to 7 years, while the boys of these ages were but 18 per cent.

9. The standing of the lowest grades, to which attention was before directed, has shown improvement, marked in some schools and only fair in others. In general the boys' classes have not yet reached a thoroughly satisfactory standing in the work of these grades.

10. The equipment of the schools, as noted in the individual reports, is fairly good though not complete in all cases. Every school should have a proper globe and an ample supply of maps, among which those of the World, Canada and Ontario should always be found.

11. In some instances the rooms are small, and the lighting and ventilation not altogether satisfactory. Where the light comes altogether or chiefly from the right the seats should be faced in the opposite direction. In certain schools better provision for ventilation could be provided at a very moderate outlay. In all these matters affecting the health of the teachers and children the Board has plain and responsible duties.

12. More fitting accommodation should be provided for Ste. Anne's School as soon as the resources of the Board will permit.

13. An examination of the figures of the accompanying school returns will make it clear that certain classes are greatly overcrowded while others have but a small number. Where 100 to 130 pupils are registered for a single teacher it is but too evident that any individual cannot receive that personal attention so necessary in junior grades. If all class rooms were of the right kind it would be very easy to remedy this matter, because it is not in general a larger staff but a re-arrangement and proper classification that will be required. Unfortunately, however, several of the rooms are small and not well lighted and ventilated. But a better system of grading is also needed. In some of the larger schools there are two or more grades covering about the same course in their studies, and at times pupils skip a grade or more in their promotions. As a present remedy for the overcrowding, it will be found possible to place in most cases three of the higher grades into two compartments and divide the lower classes where the attendance is too large.

14. With this report is sent a digest of the attendance of the half year from January to July, 1894, giving the registered and the average attendance of all the schools and separately by classes. An examination of this will make it plain that the regularity of attendance varies considerably both by schools and in individual classes. The reasons for this might be investigated by the Board. It will be seen that there is a wide difference between the average for the half year and that of the previous year, 1893. The figures of yearly attendance in the Ottawa Public Schools for 1893 (the latest to hand) are also given. Comparisons may be made as to the number of classes, the number of pupils for each teacher, etc.

ORGANIZATION OF THE COMMISSION.

To the Hon. G. W. Ross, LL.D., Minister of Education, Province of Ontario.

SIR,—In pursuance of this Commission, the Commissioners met in the Normal School, Ottawa, on June 4th. and elected Mr. Scott chairman, and Mr. Chenay secretary.

They then considered the work to be done, the best means of accomplishing it, notified all parties concerned, and after planning their work for Wednesday, June 5th, adjourned for the day.

That evening the Rev. J. T. Foley and Mr. Chenay notified the chairman of their intention to resign from the Commission. Subsequently they did resign.

The Commission was reorganized by the appointment of Edward Ryan, B.A., M.D., of the city of Kingston, and J. J. Tilley, Esq., Inspector of County Model Schools for the Province of Ontario, and on June 11 the Commission as reorganized met in the Normal School, Ottawa, elected Mr. Scott chairman, Dr. Ryan secretary, and after the transaction of some other business adjourned to meet at St. Patrick's school on Wednesday, June 12, at 9 a.m.

On arriving at this school the next morning Brother Director Mark informed them that "his higher superiors had given instructions that he was not to allow the Commissioners to examine the classes." They next visited La Salle school. Here they were received by Brother Director Philadelphus, who said "he had orders not to allow the inquiry in this school."

The Commissioners retired, and having doubts as to the extent of the resistance to be offered, they returned to La Salle school and were informed by Brother Philadelphus, that "As soon as the Commissioners entered a room the brother in charge would leave his class. The pupils would be allowed to remain and be at the disposal of the Commissioners. Nothing would be said to them (pupils) to set them against the Commissioners. The teacher would not answer any questions the Commissioners might ask him. He (teacher) would give them no information regarding his class. In fact, the resistance to the inquiry meant everything short of using force." This view of the official instructions to the Brothers was confirmed by Brother Director Mark on whom your Commissioners called a second time, and both gentlemen assured the Commissioners that the same order had been issued to all the Brothers in the city.

The Commissioners called also at St. Patrick's school for girls and at the Water Street Convent. At both these schools they were cordially received and the Rev. Mother Superior informed them that they were welcome and that the Sisters would aid them in every way in the prosecution of their inquiry.

The Commissioners spent Thursday, June 13, in preparing examination papers and on Friday, June 14, they visited a number of schools to get information regarding their classification, the books used, etc. At Garneau school they learned that the order to resist the Commission had been withdrawn.

After the withdrawal of the order to resist the Commission the Brother-Directors in charge of the schools and each teacher under them gave every assistance possible to aid the Commissioners in the prosecution of their inquiry.

DAILY WORK OF THE COMMISSIONERS.

Beginning on Monday, June 17, and continuing until the close of the schools on June 28, classes were examined daily from 9 to 12 a.m., and from 1.30 to 4 p.m. From 4.30 to 6 p.m. the Commissioners met each day at the Normal School to meet with any persons interested in their proceedings, to revise the work done in the classes during the day, and to arrange the work for next day.

SCHOOLS EXAMINED.

The classes in the following boys' schools were examined: St. Patrick's School and Catholic Lyceum, St. Bridget's, St. Jean Baptiste, La Salle, Brebeuf, St. Joseph's and Garneau; and the following girls' schools: St. Patrick's, Our Lady's, St. Joseph's, St.

Rosaire, Guigues, and Youville. Sixty-six classes in all were examined ; 37 boys' classes and 29 girls' classes. All the boys' classes were taught by Brothers except three at St. Joseph's School, which were taught by three lay teachers. All the girls' classes were taught by Sisters.

MODE OF EXAMINATION.

FORM V.—ST. PATRICK'S SCHOOL (Boys).

Form V. being a special class was examined by written examination in Arithmetic, Algebra and Geometry, and by oral examination in Reading, Literature, Grammar and Bookkeeping.

FORM IV.

Written examinations were given in Form IV., Senior and Junior Sections, in Arithmetic, Geography, History and English Grammar to both English and French Classes and in English dictation to the French Classes.

FORM III.—SENIOR SECTION.

Written examinations were given in Arithmetic, Geography and History to all the classes and in English Grammar to the English Classes and in English dictation to the French classes.

FORM III.—JUNIOR SECTION.

Written examinations were given in Arithmetic and Geography to all the classes and in English Grammar to all the English classes and in English dictation to the French classes.

FORM II.—SENIOR AND JUNIOR SECTIONS.

Written examinations were given in Arithmetic and English dictation to all the classes English and French, and oral examinations in Geography.

FORM I.—SENIOR SECTION.

Written examinations were given in Arithmetic and in Spelling by dictation in all the classes, English and French, where possible.

FORM I.—JUNIOR SECTION.

This class was examined orally in Arithmetic.

Oral examinations were given in the classes of all the forms where possible, in English Reading and Literature.

QUESTIONS.

In every subject the questions both oral and written were kept within the limits of the work prescribed by the Education Department, but in several cases it was found that the work prescribed had not been overtaken by the class; this was particularly the case in history.

In order to examine as large a number of classes as possible before the close of the school term on June 28th the Commissioners employed each day two and sometimes three experienced teachers to preside at the written examinations, thus leaving themselves free to conduct the oral work.

From time to time the questions were somewhat changed, but the same standard of difficulty was maintained throughout, and thus, a uniform test was applied to all classes of the same grade.

In most cases the papers for the French pupils were set in French and the answers were written in French. The answers in English Grammar in Form IV. were written in English, except at St. Jean Baptiste, where the paper was set in French and the answers given in French.

The French pupils were not examined as to their knowledge of the French language.

THE RESULTS OF THE INSPECTION.

A.—THE STANDING OF THE PUPILS.

Note.—As the classes in St. Joseph's School (boys) are taught by lay teachers, the percentages obtained are counted separately in making comparisons with other schools.

ARITHMETIC.

FORM I.—JUNIOR SECTION.

The boys except at St. Joseph's were not properly introduced to Arithmetic. They had been taught to deal with figures instead of numbers. In some schools many in the highest class of this section could not tell how many dots in :: or in . . . In other schools the pupils were working addition and subtraction with numbers of three figures.

The girls' classes were generally taught number in a rational manner and intelligent answers were given by them. One exception to this was the class at St. Rosaire, where the beginners were working addition with numbers of three figures.

FORM I.—SENIOR SECTION.

The questions given were always easy mechanical examples (Appendix B.) The work was almost perfect at St. Joseph's (boys), and was good at Our Lady's (girls) and St. Joseph's (girls). The boys in every school except St. Joseph's counted their fingers, or made dots on their slates, etc.

The girls did not count to nearly so great an extent, but made an effort to add.

With the exception of the above named classes, the same pupils in the remaining classes did the examples each time and the rest seemed unable to do the work at all.

The boys were apparently taught nothing but the mechanical performance of addition and subtraction. Thus in a class of fifty-one boys of an average age of over ten years, working in multiplication with a multiplier of three figures, not one had the correct answer to $7 + 8 + 2 - 3 + 7 - 7$ written on the blackboard in this form. In a class of thirty-one boys of an average age of eleven, none had the right answer to $7 + 8 + 4 - 6 - 2 + 9$. In the other classes only a few pupils got the correct result. At St. Joseph's (boys), average age eight, everyone had the correct answer to such an example, and in the girls' classes the pupils generally had the correct answer to it.

The average of all the boys' classes omitting St. Joseph's was $31\frac{1}{2}$ per cent. correct and that of all the girls' classes was 43 1.5 per cent. correct.

FORMS II., III. AND IV.

As in the work prescribed for these forms, particular stress is laid upon the teaching of problems based upon the book work to be done, the questions set were so constructed as to test the pupils' knowledge of book work and their ability to apply it in the solution of simple problems suited to their capacity. (Appendix B.)

FORM II.—JUNIOR SECTION.

The work of these classes was very poor, averaging for the boys' classes 22 per cent. correct and for the girls' classes 24 2-5 per cent.; the exceptions were Our Lady's School (girls), in which the average was 46 per cent. correct, and St. Jean Baptiste School (boys), in which the average was 35 per cent. At the Garneau School the whole class wrote on the paper for the Junior Section and made 31 per cent.

FORM II.—SENIOR SECTION.

In the boys' classes the results are quite poor except in St. Bridget's School, in which the average was 37 per cent. correct, and in St. Joseph's, in which the average was 28 per cent. In the girls' classes the work was much better—the highest average being 51 per cent. correct in St. Joseph's School, and the next, 42 per cent. in Our Lady's School. Omitting St. Joseph's School (boys), the average for all the remaining boys' classes was 21 1-5 per cent., and that for all the girls' classes was 35 per cent.

FORM III.—JUNIOR SECTION.

The standing of both boys and girls in this section was quite low except in St. Joseph's (boys), in which the average was 79 per cent. correct, and in St. Bridget's (boys), in which it was 50 per cent. Omitting the class at St. Joseph's, the average for all the remaining boys' classes was 26 3-5 per cent. correct, and that for all the girls' classes was 24 per cent.

FORM III.—SENIOR SECTION.

The results in this section in the girls' schools were generally very good. St. Joseph's School (boys) stood first with an average of 72 per cent., and Our Lady's School (girls) was a close second with 67 per cent. Omitting St. Joseph's (boys), the average of all the remaining boys' classes was 20 4-5 per cent., and that of all the girls' classes was 47 per cent.

FORM IV.—JUNIOR SECTION.

In this section Our Lady's School (girls) with an average of 52 per cent. stood first, and St. Joseph's (boys) was second with an average of 50 per cent. Leaving out St. Joseph's (boys), the remaining classes of boys averaged 13½ per cent. The average for all the girls' classes was 33 4-5 per cent.

FORM IV.—SENIOR SECTION.

The classes at St. Bridget's and St. Joseph's amongst the boys, and the two classes of girls at Youville School did excellent work.

Omitting the class at St. Joseph's School, the average for all the remaining boys' classes was 27 2-5 per cent., and that for all the girls' classes was 56 per cent.

GENERAL REMARKS ON ARITHMETIC.

In the general standing of the schools in all the classes, St. Joseph's (boys) was decidedly above all the others, while Bréteuf School was the lowest.

Speaking generally, the work done by the boys excepting those of St. Joseph's School was poor. It was not at all unusual to find that one-third and in some cases even one-half of the pupils in a class had not obtained one single correct answer, and where reasoning was required the results were especially poor. For example :

In a class of 15 pupils 7 failed to get a single correct answer.

In one of	39	"	10	"	"	"
"	24	"	11	"	"	"
"	33	"	10	"	"	"
"	17	"	8	"	"	"
"	38	"	19	"	"	"
"	39	"	14	"	"	"
"	26	"	12	"	"	"
"	15	"	11	"	"	"
"	21	"	18	"	"	"

All these total failures were in boys' classes. In the girls' classes the number of total failures was much less than in the boys' classes, except in Form III., senior and junior sections of one school, in which three pupils out of seven and three out of six failed to get a correct answer, and in the junior third form of another girls' school in which there were ten total failures out of eighteen.

In the case of the boys, the work was badly put down upon paper except in the Senior Class at St. Bridget's, and showed that their training had been very deficient in this part of their education.

From the manner in which the girls placed their solutions upon paper, it was evident that their teachers comprehend the intimate connection between the understanding of a point and the ability to express the thought clearly in writing. The solutions were in general excellent, and it would be impossible in the time allowed to write papers more neatly and systematically.

The girls solved or attempted to solve a much larger number of questions than did the boys.

GEOGRAPHY.

In both sections of Form II. the pupils were examined orally in Geography (see Appendix B. for specimens of questions asked). In Forms III. and IV. they were subjected to a written examination.

FORM II.—JUNIOR AND SENIOR SECTIONS.

Boys' Classes.

In the boys' classes at St. Patrick's, St. Bridget's, St. Joseph's, Brébeuf, and La Salle Schools, the work in this form was poor. The boys could repeat a few definitions, but the seniors were unable to use the map prescribed for them. Not one pupil in ten could even trace the outline of the continents on a map of the world. It was evident that the use of maps was almost unknown to the pupils. This was especially true of Brébeuf school, in which, although the pupils were of an average age of twelve years, they knew nothing of Geography. In the Garneau School the pupils in this form did very well, quite as well as should be expected.

Girls' Classes.

In Our Lady's School the girls of this form did well, and those of St. Patrick's, St. Joseph's and Guigues did fairly well. None of those classes except the one at Our Lady's School was up to the standard, and the seniors were not very familiar with the map work prescribed.

FORM III.—JUNIOR SECTION.

In this form the work was generally poor. The exceptions were the classes at St. Joseph's (boys), Our Lady's and Guigues Schools. The class at St. Joseph's (boys) was the only one that did really well. It made an average of 56 per cent. Omitting this

class the average for all the remaining boys' classes was 14 3-5 per cent., and that for all the girls' classes was 24½ per cent. The classes at La Salle (boys) and St. Rosaire (girls) really knew nothing of the subject.

FORM III.—SENIOR SECTION.

The class at St. Joseph's (boys) did excellent work and averaged 61 per cent. The classes at St. Joseph's (girls), St. Patrick's (girls) and Guigues (girls) did fair work, while the rest of the classes were decidedly poor. The average of all the boys' classes, omitting that at St. Joseph's, was 11 4-5 per cent., and that of all the girls' classes was 23½ per cent.

FORM IV.—JUNIOR SECTION.

The class at St. Joseph's (boys) did very excellent work and made an average of 71 per cent. The classes at St. Joseph's (girls) and St. Rosaire (girls) also did well, making an average of 49 per cent. and 45 per cent. respectively. The class at Brébeuf was very poor. Omitting the class at St. Joseph's (boys) the average for all the remaining boys' classes was 18¾ per cent., and that for all the girls classes was 39 per cent.

FORM IV.—SENIOR SECTION.

The only classes that did well were those of St. Patrick's (girls), Youville (English-speaking girls) and Youville (French-speaking girls). The others were poor. St. Joseph's (boys) made only 23 per cent. Omitting this class the average of all the remaining boys' classes was 15 3-5 per cent., and that of all the girls' classes was 52 per cent.

GENERAL REMARKS ON GEOGRAPHY.

Speaking generally of all the classes, the work of the boys in Geography, except at St. Joseph's was poor as regards both knowledge and style. The writing, spelling and composition were poor.

Excepting in two classes at St. Rosaire the work of the girls was generally fair and sometimes good as regards knowledge, and it was always excellent as to writing, composition and general style.

GRAMMAR AND COMPOSITION.

Forms III and IV. of the English schools and Form IV. of the French schools were examined in English grammar.

The same paper was used for both senior and junior sections of Form IV. of the French schools, and the average result of the examination is entered opposite the senior section (Appendix A)

FORM III.—JUNIOR SECTION. ENGLISH SCHOOLS.

The best work done by any class in this subject was at St. Joseph's (boys) where the average was 78 per cent. The remaining classes of boys averaged 30 per cent. The average for all the girls' classes was 39 per cent. The class at Our Lady's School, with an average of 56 per cent. stood first.

FORM III.—SENIOR SECTION. ENGLISH SCHOOLS.

The work in all these classes was good except at St. Bridget's (boys) and St. Patrick's (girls). In both these cases the work was poor. Omitting the class at St. Joseph's (boys) which made an average of 63 per cent., the average for the remaining boys' classes was 37½ per cent. and that for all the girls' classes was 41½ per cent.

FORM IV.—JUNIOR SECTION. ENGLISH SCHOOLS.

Each of the girls' classes did well. The average for these classes was $48\frac{2}{3}$ per cent. Only one boys' class, that at St. Joseph's, did well, making an average of 60 per cent. The remaining boys' classes made an average of $15\frac{1}{2}$ per cent.

FORM IV.—SENIOR SECTION. ENGLISH SCHOOLS.

The work done in all the classes was fair except at St. Patrick's (boys), where it was poor. The average for the boys' classes, omitting St. Joseph's (boys), which made an average of 51 per cent, was 23 per cent. and for the girls' classes it was $38\frac{1}{2}$ per cent.

FORM IV.—SENIOR AND JUNIOR SECTIONS. FRENCH SCHOOLS.

These papers were written in English except at St. Jean Baptiste School. The work was not good, except at Youville School (girls) and St. Rosaire (girls). In general the boys attempted to answer only two questions, those relating to gender and number (see Appendix B). The knowledge of the girls was much wider, and it was usual to find them making an attempt to answer all the questions.

The average for all the boys' classes was $19\frac{1}{3}$ per cent, and that for all the girls classes was $40\frac{1}{2}$ per cent.

GENERAL REMARKS ON GRAMMAR.

The papers of the boys, English and French, except those of the boys of St. Joseph's school, were very deficient in neatness and orderly arrangement, and the questions requiring the exercise of the reasoning powers were not answered at all. The composition by the boys was poor. There was no attempt at punctuation and the pupils knew scarcely anything of the ordinary rules of English composition. In the girls' classes the composition was good and the style of the work was excellent in every way.

HISTORY.

All the classes were weak in history except one in Guigues School (girls), and another in St. Joseph's School (girls).

No English history had been taught to the boys during the year and very little to the girls in the classes examined, viz: Form III., senior section and Form IV. junior and senior sections. The knowledge of Canadian history in many cases was limited to events prior to 1763, and even of this portion but little was known. Judging by the answers there was a good deal of memorizing the words of the book.

FORM III.—SENIOR SECTION.

Except in a few instances the boys did not make statements. The work was put down in such a careless way that it was often impossible to know what the pupil was trying to tell. The writing, composition where attempted, and spelling were poor, and if marks had been taken off for misspelled words, as is the custom in Departmental Examinations, whole classes, English and French, would have been left without a mark.

The girls made an attempt to express themselves in sentences and the work was neat, the answers well arranged and the spelling and composition good, except in one or two cases where they tried to write the words of the book. Omitting the class of boys at St. Joseph's which made 25 per cent., the remaining classes of boys made an average of $6\frac{2}{3}$ per cent. All the girls together made an average of $23\frac{3}{4}$ per cent.

FORM IV.—JUNIOR AND SENIOR SECTIONS.

The knowledge of all the classes was more or less deficient, except that of St. Joseph's School (girls). This class did fair work and made 33 per cent. The subject does not seem to receive much attention. The limit table is not followed. Only a pupil here and there could answer a question in English history.

The spelling, composition and writing of the boys was far from good. These necessary parts of education had been overlooked, so that even when a pupil had the information he had difficulty in expressing himself. The girls were well trained in the art of expression. The wording of their answers was good and their composition excellent, and the whole answer paper was neat and the matter well arranged.

Omitting the class at St. Joseph's School (boys) which made an average of only 26 per cent., the remaining boys' classes averaged $11\frac{3}{4}$ per cent., all the girls' classes together averaged $28\frac{1}{2}$ per cent.

SPELLING.

To test the spelling of English words in Forms I. and II. of both English and French Schools, and in Forms III. and IV. of the French Schools, a simple passage from the Reader used by the class was dictated. Care was taken to see that the passage was one which the pupils had previously studied. The pupils of Forms III. and IV. of the English Schools were judged of their spelling, by their written work in Geography, Grammar and History.

FORM I.—SENIOR SECTION. ENGLISH SCHOOLS.

The passage given in appendix B was dictated to a number of classes. In a boys' class at St. Bridget's, of an average age of 10 years, the average number of mistakes was 20; in another boys' class, average age 8, at St. Joseph's, it was 4; in a girls' class, average age $7\frac{1}{2}$, at St. Patrick's, it was 6; in a second girls' class, average age 9, at Our Lady's, it was 6, and in a third, average age 8, at St. Joseph's, it was $3\frac{1}{2}$.

Omitting the class of boys at St. Joseph's which made an average of 83 per cent., the remaining boys' classes made an average of 40 per cent., and the girls' classes an average of $78\frac{3}{4}$ per cent.

FORM I.—SENIOR SECTION. FRENCH SCHOOLS.

In some French Schools of this form English dictation was not possible. A class of 31 boys of an average age of 11 years, was tried with "Tom has a fat cat." Only two made a good attempt to write this. One had four words and the other three correct. These were all the words correctly written, or seven words were written right out of a possible 155. Neither at La Salle (boys) nor Guigues (girls) were the results satisfactory. The work of the class at St. Rosaire was excellent.

The only class of boys that could write to English dictation made 23 per cent. The girls averaged 54 per cent.

FORM II.—JUNIOR SECTION. ENGLISH SCHOOLS.

The spelling of the girls in this section was excellent, averaging $77\frac{1}{2}$ per cent. The only class of boys made 44 per cent.

FORM II. JUNIOR SECTION. FRENCH SCHOOLS.

The results were poor except at St. Rosaire. The average of all the boys' classes was 21 per cent., and of all the girls' classes 53 per cent.

FORM II.—SENIOR SECTION. ENGLISH SCHOOLS.

The results were generally good. Omitting the class at St. Joseph's (boys) which made an average of 75 per cent., the remaining boys' classes averaged 54 per cent. All the girls' classes together averaged 70 per cent.

FORM II.—SENIOR SECTION. FRENCH SCHOOLS.

The spelling was not good except at Garneau School (boys) and St. Rosaire (girls). The average for all the boys' classes was $42\frac{1}{4}$ per cent., and for all the girls' classes it was $56\frac{1}{2}$ per cent.

FORM III.—JUNIOR SECTION. ENGLISH SCHOOLS.

The spelling was good at St. Joseph's (boys), Our Lady's (girls), and St. Joseph's (girls). Omitting the class at St. Joseph's (boys) which made an average of 69 per cent., the remaining classes of boys averaged 43 per cent. The girls' classes made an average of $62\frac{1}{2}$ per cent.

FORM III.—JUNIOR SECTION. FRENCH SCHOOLS.

Considering the easy passages dictated the classes did not do very well. The boys' classes averaged 39 per cent., and the girls' classes 41 per cent.

FORM III.—SENIOR SECTION. ENGLISH SCHOOLS.

The class of boys at St. Joseph's made an average of 64 per cent. Omitting this class, the average for the other boys' classes was $42\frac{1}{2}$ per cent. The girls' classes averaged $56\frac{2}{3}$ per cent.

FORM III.—SENIOR SECTION. FRENCH SCHOOLS.

The average of all the boys' classes was 49 per cent., and that of all the girls' classes was $47\frac{1}{2}$ per cent.

FORM IV.—JUNIOR SECTION. ENGLISH SCHOOLS.

The class at Our Lady's School did excellent work, making an average of 80 per cent. The class of boys' at St. Joseph's School made 61 per cent. Omitting this class the other boys' classes averaged 32 per cent. All the girls' classes averaged 68 per cent.

FORM IV.—JUNIOR SECTION. FRENCH SCHOOLS.

The boys' classes made an average of $46\frac{1}{2}$ per cent. The girls' classes made an average of $56\frac{1}{2}$ per cent.

FORM IV.—SENIOR SECTION. ENGLISH SCHOOLS.

The best class in this form was the one at Youville School (girls). This class averaged 82 per cent. The class at St. Joseph's School (boys) averaged 55 per cent. Omitting this class, the other classes of boys averaged $41\frac{1}{2}$ per cent. The girls' classes averaged 76 per cent.

FORM IV.—SENIOR SECTION. FRENCH SCHOOLS.

The boys' classes made an average of $55\frac{1}{3}$ per cent. and the girls' classes 64 per cent.

READING AND LITERATURE.

ENGLISH SCHOOLS.

In testing the reading, care was taken to select a lesson for reading which the pupils had already studied.

FORM I.—JUNIOR SECTION.

The reading of the class of boys at St. Joseph's was excellent, and the girls generally read well. This class at St. Joseph's (boys) made an average of 72 per cent. Omitting this class the average for the remaining classes of boys was 19 per cent. Their reading consisted in naming individual words. The average for all the girls' classes was $55\frac{2}{3}$ per cent.

FORM I.—SENIOR SECTION.

The class of boys at St. Joseph's School and the girls in all the schools read well. Omitting the class of boys at St. Joseph's, which made an average of 64 per cent., the remaining boys' classes averaged 41 per cent. The average for all the girls' classes was $54\frac{2}{3}$ per cent.

FORM II.—JUNIOR SECTION.

The reading of the girls generally was good. The class at St. Joseph's School (girls) read almost perfectly. The only class of boys averaged 40 per cent. The girls' classes averaged $65\frac{1}{3}$ per cent.

FORM II.—SENIOR SECTION.

Decidedly the poorest reading in this section was that by the class of boys at St. Joseph's School which made 43 per cent. The best was that of the class of girls at the same school which made 77 per cent. Omitting the class of boys at St. Joseph's School, the average for the remaining boys' classes was $51\frac{1}{2}$ per cent. The girls' classes averaged 66 per cent.

FORM III.—JUNIOR SECTION.

The reading generally was very good. The class at Our Lady's School (girls) read excellently. Omitting the class of boys at St. Joseph's School which made 47 per cent.—the lowest of any of the classes—the boys' classes averaged 53 per cent. The girls' classes made an average of 64 per cent.

FORM III.—SENIOR SECTION.

The class at St. Patrick's School (boys) was decidedly the best, making an average of 71 per cent. Omitting the class of boys at St. Joseph's which made 51 per cent., the remaining boys averaged $62\frac{1}{2}$ per cent. The average for all the girls' classes was 60 per cent.

FORM IV.—JUNIOR SECTION.

The two girls' classes at Our Lady's School and St. Joseph's read well, making 70 per cent. and 68 per cent., respectively. Omitting the class at St. Joseph's School (boys) which averaged 50 per cent., the remaining boys' classes averaged $30\frac{1}{2}$ per cent. The girls' classes made an average of $64\frac{1}{3}$ per cent.

FORM IV.—SENIOR SECTION.

The class at St. Patrick's School (girls) read well and made an average of 64 per cent. The class at Youville School was not examined. Omitting the class of boys at St. Joseph's School which made 57 per cent, the remaining boys' classes averaged $36\frac{1}{2}$ per cent. The girls' classes averaged $67\frac{1}{2}$ per cent.

GENERAL REMARKS ON READING IN ENGLISH SCHOOLS.

Speaking generally of the boys' classes, the great fault of the reading was its lack of expression and the miscalling of words. In the lowest forms, except at St. Joseph's (boys), the reading consisted in the naming of words or of rhyming off a passage memorized from reading it again and again.

In literature, the boys of the English Schools did much better than in reading, and showed generally an intelligent grasp of the subject matter of the lessons read. Were it not for this the marks would have been much lower than they are.

In the girls' schools the reading and literature were excellent in many cases, and more than good in all. Even the youngest pupils made very successful efforts to read with expression. The Sisters deserve much credit for the care and thoroughness with which these subjects have been taught.

FRENCH SCHOOLS.

FORM I.—SENIOR SECTION.

The only class that could read in English was the one at St. Rosaire. It read very well and made 55 per cent.

FORM II.—JUNIOR SECTION.

The boys in the Garneau School read excellently. The girls at Guigues and St. Rosaire Schools did well. The average of the boys' classes was $40\frac{1}{3}$ per cent., and that of the girls' was 46 per cent.

FORM II.—SENIOR SECTION.

The class at Garneau School did well in reading and made 75 per cent. The average of the boys' classes was 45 per cent., and that of the girls' was $50\frac{1}{2}$ per cent.

FORM III.—JUNIOR SECTION.

The boys averaged $40\frac{1}{3}$ per cent. and the girls $63\frac{1}{2}$ per cent.

FORM III.—SENIOR SECTION.

The boys averaged 38 per cent. and the girls 67 per cent.

FORM IV.—JUNIOR SECTION.

The boys averaged 46 per cent. and the girls $68\frac{1}{2}$ per cent.

FORM IV.—SENIOR SECTION.

The boys averaged $42\frac{2}{3}$ per cent. and the girls 70 per cent.

READING AND THE TEACHING OF ENGLISH TO FRENCH PUPILS.

BOYS' SCHOOLS.

Except in the senior class of Garneau School the reading was not good. The classes where "none" is entered had not yet begun English reading.

The "conversational method" of teaching had not been followed sufficiently, and there was but little evidence that the instructions to teachers of French-English Schools issued by the Education Department in April, 1892, as "Hints on Teaching English to Junior French Classes" was being followed. (See appendix C.)

The Commissioners also found that the Regulations of the Education Department which, since 1891, have required teachers "to conduct every exercise and recitation from the text-books prescribed for Public Schools in the English language," and which also require that "all communications between the teacher and pupil in regard to matters of discipline and in the management of the school shall be in English, except so far as this is impracticable by reason of the pupil not understanding English" was not observed in the French Schools.

All the subjects prescribed for study are taught in the French language, and French is almost entirely the language of these schools. The use of English had been confined in a large majority of the classes to the few minutes in the day given to the teaching of English.

In some cases this was necessary on account of the inability of the teacher to speak English, and in others the teachers knew so little English as to make it undesirable that they should undertake to teach in this language. In such cases as this a teacher who can speak English passes from room to room and devotes from 15 minutes to half an hour daily to teaching the English language in each room.

The "conversational method" was employed at the Garneau School, and in Form II. of this school the results were very good. The teacher said that he gave one hour and a quarter daily to conversation in English, in which the pupils were required to take part. This was the best class in English in the second form found in any of the French Schools.

The teaching of English in the second and higher forms of the other French Schools was carried on by reading from an English reading book and by translation from text-books provided for the purpose.

In the second and third forms of these schools there was but little teaching of English. The exercise consisted almost entirely in the spelling and pronunciation of the words of the reading lesson by the teacher and the repetition of the same by the pupils simultaneously and individually. No explanation of words was given, and no attempt was made to enlarge the vocabulary of the children. While in some cases the pupils could pronounce the words fairly well, it was not at all uncommon to hear boys eleven and twelve years of age who had gone through two or three forms in the school read so badly that it was quite impossible to know what they were reading by listening to them. The teaching of English by translation was doing but little for the pupils.

For beginners elementary "Lessons in English" is used. This book contains thirteen lessons, and when a pupil passes from the form in which it is used to the next higher form he is required to purchase a larger edition of the book containing forty-five lessons. The first thirteen lessons of the advanced book are a reprint of the primary book. Thus after having got an advanced book the child finds that he has to go over the old work before coming to the new matter. It must be noted, however, that a portion of the subject-matter of each lesson printed in the smaller book is not learned until the child meets it in the larger one.

It was found in the La Salle School that during the past year only six lessons had been learned in the smaller book, and in the next higher class only fifteen lessons out of forty-five had been learned in the advanced book. Thus the pupils of this room had bought a new book and had learned only two lessons more than were contained in the smaller one which had been discarded when they were promoted. It was also found in the same school that the pupils in one class take the first sixty pages in their English

Reading Book, and that when they are promoted they will begin at the beginning of the same book. During the past year the class from which promotion is made had gone over sixty pages, and the class to which promotion will be made had gone over only one hundred pages. Thus in a school year the pupils had gained only forty new pages in this reading book.

From a consideration of all the facts and from a careful examination of the French Schools the Commissioners can come to no other conclusion than that there is no attempt worthy of the name made to teach English in the boys' schools.

The teaching is largely giving to the pupil written forms, whose sounds when spoken by him convey no idea to his mind.

If the instructions of the Education Department with reference to the teaching of English were followed, and a teacher capable of teaching English employed for every class, the text-books for translation could be laid aside, and the pupils would learn more English in six months than many of them know now after having been at least four years at school.

GIRLS' SCHOOLS.

In the three French Schools for girls which were examined, only a few teachers were met who could not speak English fairly well.

A teacher was also employed in each of these schools whose sole business it was to go from class to class and teach English. The "conversational method" was used in the junior classes, and the instructions regarding the "teaching of English to junior French classes" were being followed, although the work to be done at Guigues was more than one teacher could overtake and do it justice. In all the schools the youngest pupils were making fair progress in conversation, and a very much smaller proportion of girls was found who did not understand the speaker in English than amongst the boys.

The reading and literature in all the classes were quite satisfactory. Many read with excellent expression, and nearly all understood the meaning of what was read.

WRITING.

The work in the copy-books and exercise books of both boys and girls was excellent. These books were clean and neat. The whole reflected great credit alike upon the teachers and pupils. From observing these books from day to day it was expected that the writing upon the examination papers, especially in Forms III. and IV. of all the classes, would be good.

Boys' Classes.

The written work amongst the greater number of boys' classes was sadly at variance with these expectations. The letters were so carelessly and imperfectly formed, and the arrangement of the work upon the paper was so lacking in system that the papers generally presented an untidy appearance and were very difficult to read. The classes at St. Joseph's School (boys) were no exception, and their writing could not be ranked good in all cases.

A very large number of pupils in the primary classes of boys could make no attempt to write. In some cases they had no facilities, having neither pencils nor pens; in others they had not been taught. This remark is made concerning pupils who had been at school a considerable time and not about those who had entered it recently. The primary class at St. Joseph's School (boys) was an exception. Every one here was being taught to write. The slate-pencils and even the lead-pencils were very often so short as to prevent the pupils from acquiring proper habits of holding the pencil or pen.

Girls' Classes.

In the girls' schools the writing was good, and in some of the senior classe it was very excellent indeed. The writing upon the examination papers was in keeping with

the excellent way in which the exercise-books of all kinds were written. The facilities for writing amongst the girls of the primary classes were good. There were no girls who had been any length of time at school who could not make a fair attempt to write. Many of the classes already use the "Vertical Writing." The average for all the boys' classes omitting St. Joseph's School, which made 49 per cent., was 40 per cent., and that for all the girls' classes was 59 per cent.

FORM V.—CATHOLIC LYCEUM.

This was an advanced class and was examined orally in Grammar, Book-Keeping, Reading and Literature and by written examination in Arithmetic, Algebra and Geometry.

In grammar the results were very disappointing. Boys 15 and 16 years of age, who have gone through the lower grades knew scarcely as much of the subject as pupils well up in a good Third Form should know. They had learned definitions and could repeat them very well and give the rules for inflection, etc., but in analysis and parsing their work was very inferior. For example in the sentence, "That he will return soon after the vacation is certain," "that" was parsed as a noun, "soon" as a conjunction, "after" as an adverb modifying "soon," "he" as the subject of "is" and "certain" as an adverb modifying "is."

The pupils knew something of the theory of book-keeping and could make simple entries correctly, but when transactions involving some thought were placed before them they failed. For example not one pupil could explain the following entry :

Mdse.	Dr.	\$800.
	To Cash	\$500.
	" Bills Rec.	200.
	" J. Smith,	100.

The book used by the class for literature was Washington Irving's Sketch Book. The pupils were asked to read from this book. The reading was fair. A few read with good expression and all pronounced the words fluently and correctly. Their appreciation of the literature of the lesson read (Rip Van Winkle) was good.

On a written examination in arithmetic the class averaged 31 per cent. This was only a fair mark. On the examination in algebra and geometry (see appendix B for the paper) the average for the class was $3\frac{1}{2}$ per cent. The class really knew nothing of these two subjects.

B.—TEACHING AND TEACHERS.

The Director of each school was informed that his school would be inspected during the sitting of the Commission, and on the evening before it was examined was notified of the work that would be expected from himself and staff, and that each teacher would be expected to teach a lesson before the Commissioners on a subject to be selected by himself.

THE CHRISTIAN BROTHERS.

The distinguishing characteristic of the teaching observed was the readiness to accept mere memory answers without examining whether these were understood or not. Thus the whole work was largely a mechanical repetition of words. The reasoning powers were not exercised and often pupils were told the answers to questions which they could have answered themselves if given a moment or two to think. Pupils were invariably asked to repeat the words used by the teacher.

These observations were confirmed by the written answers of the pupils. Whenever reasoning was required the answering was in general poor. A marked exception to this was the answering of the three pupils composing the highest class at St. Bridget's on

the Arithmetic paper, and of the lesson in Reading taught by the Brother in charge of the Junior Section of Form I. St. Patrick's School, the only defect in this lesson being that the class as a whole was not taught.

During the lesson the Brothers confined their attention to a few pupils only. The others were neglected and soon fell into a listless, indifferent state.

The written examinations showed that the pupils were deficient in power to grasp the meaning of the questions and in ability to arrange their work neatly and systematically.

The general deportment of the pupils was good, and the order in most cases was satisfactory in spite of the fact that some classes were much crowded.

The inadequate knowledge and the frequent mistakes in English of even the English speaking teachers, showed that in many cases the literary qualifications of these teachers was not what it should be.

The Commissioners believe, that, as regards the purpose of education and the means of securing it, the Brothers are not familiar with modern methods of teaching.

THE SISTERS.

The teaching of the sisters showed good general scholarship. From the way in which they taught their lessons they evidently understood that education is training and can be secured only by the self-exertion of the pupils.

Although the knowledge of the pupils was in some cases defective their written answers were generally such, that the papers of whole classes might be put on exhibition as specimens of good penmanship and of care and neatness in systematic arrangement and they showed clearly that a successful effort had been made to lead the pupils to think.

The personal tidiness of these teachers and the neatness of their school-rooms showed that they understood the value of example as a teaching power, and indicated that attention was given to the little things which constitute perfection.

C.—THE CHARGES AGAINST MR. INSPECTOR WHITE.

It having been arranged that the Rev. Bro. Flamien representing the Christian Brothers was to meet the Commissioners in the Normal School at 4.30 p.m. on June 20, the chairman and secretary of the General Board of Separate School Trustees as well as the chairman of each of the sections were duly notified of this meeting and invited to be present. They were also requested to inform all interested parties and ask their presence.

At the time of meeting there were present the Rev. Bro. Flamien, Visitor, Rev. Bro. Gemel-Martyr, Assistant Visitor, Bro. Director Philadelphus, the Chairman of the Ottawa Separate School Board, the General Secretary of the Board, the Chairman of each of the sections, several trustees and a number of Separate School supporters.

The chairman read the commission and explained that the purport of the present meeting was "to enquire into the charges made against Mr. Inspector White by the Rev. Bro. Flamien, representing the Christian Brothers."

The Rev. Brother Flamien stated that the Brothers did not oppose the Commission as coming from the Government but as coming at the request of the Board of Trustees. He gave as his reasons that the Trustees had signed an agreement with the Brothers for a year, expressing thereby approval of their work, and that the action of the Board in asking for a Commission was regarded as a breach of faith.

The Rev. Brother then stated that neither he nor his subordinate, Brother Gemel-Martyr, had any charges to make against Mr. Inspector White. Had he any charges to make he would make them to the Minister of Education, who is the proper authority.

The Secretary of the General Board, the Chairman of the Board and the Chairman of each of the sections also stated that no charge had been preferred to the Board against Mr. Inspector White.

The chairman then adjourned the meeting.

D.—MR. WHITE'S OFFICIAL STATEMENTS.

FREQUENT CHANGES OF TEACHERS.

In the sixty-three classes taught by the Christian Brothers and the Sisters which were examined by the Commissioners, ten classes had changed their teachers during the year and twenty-seven others had been in charge of their present teachers for a year only. The former change is a great loss to the class and the latter, where the work of the teacher was changed as it was in many cases, involves a great loss of teaching power to the teacher who is transferred from a class with the work of which he is familiar to another the work of which he has to learn.

SCHOOL HOURS.

The Commissioners found that the school hours varied very much. There was no uniformity.

The following are the hours of assembling and dismissing at the various schools named as shown by the time-tables in use :

School.	Forenoon Session.	Afternoon Session.
La Salle	8.30 — 11.30	1 — 4
"	8.45 — 11.30	1 — 4
St. Jean Baptiste	8.45 — 11.30	1 — 4.15
"	8.45 — 11.30	1 — 4
"	8.30 — 11.30	1 — 4
Brebeuf	8.45 — 11.30	1 — 4
"	8.45 — 11.30	1 — 3.30
St. Bridget's	9 — 12	1.30 — 4
"	8.45 — 12	1.30 — 4
St. Patrick's (boys)	8.30 — 11.45	1 — 4
"	9 — 11.45	1.15 — 4
"	9 — 11.40	1.15 — 3.45
Guigues and Youville	9 — 11.30	1 — 4
"	9 — 12	1.30 — 4
"	9 — 12	1.20 — 4
"	9 — 11.30	1.15 — 3.30
"	9 — 11.50	1.15 — 3.50
St. Joseph's (girls)	9 — 12	1.30 — 4
"	9 — 11.30	1.30 — 3.30

St. Patrick's (girls) and Our Lady's had the same hours as St. Joseph's (girls).

It was not always the youngest pupils who had the shortest hours as was the case at St. Joseph's (girls).

The Commissioners are of the opinion that the interests of both pupils and parents would be best served by the Board of Trustees acting on the recommendations of Mr. Inspector White.

UNIFORM LIMIT TABLE.

As shown by the results of the examination and by the text-books used by the classes, there had been no uniformity in the work of the same classes in the various boys' schools. The corresponding girls' classes at St. Joseph's, St. Patrick's and Our Lady's Schools, are doing the same work. The advantages of such uniformity are so obvious that your Commissioners are surprised that the Board has not taken the matter in hand long ere this.

UNIFORM EXAMINATIONS.

From a careful inspection of the work done by the boys in their written examinations, your Commissioners are of the opinion that these schools would be greatly benefited by holding regular, uniform, written examinations in the same grade in all the schools. This matter and that relating to uniformity of studies are urgent and call for the immediate attention of the Board.

COST OF TEXT-BOOKS.

Statement of cost of text-books in Reading, Arithmetic, Geography, Grammar, and History in each form of the Schools named, including the Ottawa Public Schools. The religious books such as Histoire Ste. and Catechism, and also Copy-books, Drawing-books, Scribblers, etc , are not included.

Form.	Brebeuf.		La Salle.		Guigues and Youville.		St. Patrick's (girls).	St. Patrick's (boys).	Public.
	English.	French.	English.	French.	English.	French.	English.	English.	English
I	\$ c.	\$ c. 20	\$ c.	\$ c. 45	\$ c. 7	\$ c. 23	\$ c. 17	\$ c. 32	\$ c. 15
II	75	1 15	75	1 50	10	20	50	50	25
III	35	1 90	1 35	2 35	25	2 15	85	1 85	1 60
IV	1 00	95	30	60	40	1 05	3 05	1 45	80
	2 10	4 20	2 40	4 90	82	3 63			
Total ..	6 30		7 30		4 45		4 57	4 12	2 80

Part I. of the First Book is not used in the Ottawa Public Schools.

Three dictionaries used in teaching Reading, costing \$2.05, are not included in the statement regarding Brebeuf school, as dictionaries were not reported by the Directors of the other schools:

Other text-books than those whose prices are given were found in the hands of pupils. The teachers explained that these had been used but were not now being sold to the pupils.

A consideration of this table shows the need of the Board taking action to determine the books to be used in each class, e.g., a pupil in some of the schools examined has to pay from \$1.10 to \$1.30 for the text-books in Arithmetic. A pupil at the Public Schools uses one book which costs 25c. If the work of all classes in the same Form were uniform, and if pupils were promoted by uniform promotion examinations for all the classes, the necessity of using the same text-books in each school would be at once obvious.

The boys buy all these books from the Brothers, and the girls buy a considerable number of theirs from the Sisters. The price charged is not uniform, *e.g.*, *Arithmetique Elementaire* is sold in some schools for 30c. and in others for 25c.; *Arithmetique Cours Moyen* for 40c. and 35c., *Arithmetique Commerciale* for 60c. and 50c. Your Commissioners are of the opinion that it would be to the advantage of these schools to bring them under the provisions of the School Act, section 210: "No teacher, trustee, inspector, or other person officially connected with the Education Department, the Normal, Model, Public, or High Schools or Collegiate Institutes, shall become or act as agent for any person or persons to sell, or in any way to promote the sale for such person or persons, of any school, library, prize or text-book, map, school apparatus, furniture or stationery, or to receive compensation or other remuneration or equivalent for such sale, or for the promotion of sale in any way whatsoever."

In neither the English nor French Schools are the text-books uniform. The School Act declares that the School Board shall "see that all the pupils in the schools are duly supplied with a uniform series of text-books"—(The Separate Schools Act, sect. 32, art. 7.)

BUILDINGS, YARDS, Etc.

Water Street Convent. The space, lighting, ventilation and furniture are in general good. The school is not well supplied with maps and globes.

Guigues School. The lowest class is poorly housed. It is in an old frame building unfitted for school purposes. The other classes are not much better. The building is poor and out of repair. The ceilings are low. The stairs are very steep and would be dangerous in case of fire or other alarm. In the summer some of the rooms are oppressively hot, and in the winter it would be impossible to maintain a proper uniform temperature in any of them. The school is not well supplied with maps and apparatus.

St. Ann's School. A new building is needed. It is dangerous for children. So steep and narrow are the stairs to the second floor that any alarm as of fire would render it almost impossible to remove the children in safety. The yard is small and the closets poor.

St. Bridget's School. This building is heated and ventilated by the Smead-Dowd system. The yard is low and small, and is flooded each spring and fall. It is covered with black cinders, which no doubt largely accounts for the color of the floors. The maps are old and out of order, and the supply is insufficient.

Our Lady's School. The class-room space is small. There is no ventilation except by means of the windows, which must endanger the health of both pupils and teachers in winter. The yard is very small, and it is under water in spring and fall. This could be remedied by a small outlay. The supply of maps and apparatus is meagre.

Brebeuf School. The space is sufficient, but the seats and desks are old and in some cases quite insufficient in number. The walls and wood work are dirty. The stairs would be dangerous to the pupils in case of an alarm. The accommodation provided for the Brothers is altogether inadequate. Their health must suffer from being compelled to sleep in such a small room destitute of ventilation and also imperfectly heated.

St. Patrick's School (Boys). The building is good though slightly out of repair. It is heated and ventilated by the Smead-Dowd system. In one room the light comes from the right.

The Catholic Lyceum. The building and furniture are new and fully up to the times. The furniture has been carefully looked after. The water-closet is too near the building. Both these schools need more maps and apparatus.

St. Patrick's School (Girls). This building is satisfactory. The maps and apparatus are sufficient.

St. Rosaire School. The building and apparatus are satisfactory.

St. Jean Baptiste School. The space is insufficient in every room. The lighting is poor. The supply of light is quite insufficient in fall and winter. There is no ventilation except by means of the windows. The stairs leading to the second floor are very narrow. An outside one has been provided, but in case of a fire it might be difficult to reach it from the south side of the building. The closets are poor—they are a menace to the health of the neighborhood. The building is heated by steam; in case of a fire at night the Brothers who reside in the attic would find it difficult to escape.

La Salle School. Some of the rooms are too small for the numbers in attendance. The lighting is not always good. The supply of maps and apparatus is meagre. The closets are new and in good order.

Your commissioners were treated with the greatest kindness by everyone with whom they came in contact, and they desire to thank each and all for the assistance so courteously rendered.

All of which is respectfully submitted.

WM. SCOTT,
EDW. RYAN,
J. J. TILLEY.

APPENDIX. A.—TABLE showing the schools examined, the age of the pupils

Subject.	Class.	English Schools.							
		St. Patrick's, Boys.		St. Bridget's, Boys.		St. Joseph's, Boys.		St. Patrick's, Girls.	
		Age.	Per cent.	Age.	Per cent.	Age.	Per cent.	Age.	Per cent.
Arithmetic	Jr. I.	7 $\frac{3}{4}$		8		7		6 $\frac{1}{2}$	
	Sr. I.	9	37	10	23	8	95	7 $\frac{3}{4}$	40
	Jr. II.	No class		10 $\frac{1}{2}$	22	No class		8 $\frac{1}{2}$	6
	Sr. II.	11	15	11	37	11 $\frac{1}{2}$	28	10 $\frac{1}{2}$	28
	Jr. III.	11 $\frac{1}{2}$	19	11 $\frac{1}{2}$	50	11 $\frac{1}{2}$	70	12	18
	Sr. III.	13	29	12 $\frac{1}{2}$	19	12 $\frac{1}{2}$	72	12 $\frac{1}{2}$	42

B.—Specimens of examples given and the papers set in the various subjects :

FORM I.—SENIOR SECTION.

Arithmetic.

Add	368	7854	36	From	700
	482	396	48	Take	146
	567	78	79		—
	496	892	68		
	375	59	357	From	3062
	648	67	—	Take	1427
	—	—	—		—

FORM II.—JUNIOR SECTION.

- (1) Write in figures
 - (a) Sixty-four thousand four hundred.
 - (b) Forty thousand three hundred and forty.
 - (c) Ten thousand and ten.
- (2) $75876 + 358796 + 876539 + 684634 + 687495$.
- (3) $6790010 - 4800112$.
- (4) How much is 858 less than 957?
- (5) I bought 65 cows at \$30 each, and 12 horses at \$65 each. I sold all the horses for \$1,000 and the cows at \$25 each? Did I gain or lose altogether, and how much?
- (6) Find the total cost of 18 yds. at 65 cts per yd., 75 yds. at \$1.20 per yd., 65 bushels at \$2 05 per bushel and 36 lbs. at \$1.00 per lb.

FORM II.—SENIOR SECTION.

- (1) Write in figures
 - (a) Twenty thousand and twenty.
 - (b) Three hundred thousand three hundred and three.
- (2). Add forty-four thousand and forty, sixty-four thousand six hundred, and ten thousand one hundred and one together.
- (3) What must be taken from 85,000 so that it may be just 58 more than 7,854?
- (4) John has 48 cents, James has 3 times as many as John, Thomas has 15 more than John and James together. How many cents have they altogether?
- (5) Divide \$600 among John, James and Thomas, so that John may have \$48 more than James and Thomas together, and that James and Thomas may have the same number of dollars.
- (6) Divide 7,856,463 by 687.

FORM III.—JUNIOR SECTION.

- (1) If 2 men weigh 160 lbs. each and 3 men weigh 180 lbs. each, what is the average weight of each of the 5 men?
- (2) A man sells 48 bu. of wheat at 95 cts. per bushel and buys 65 yds. of cloth at 25 cts. per yd., 2 pair of boots at \$3.50 per pair and \$3 worth of sugar. How much money has he left?
- (3) If a man sells 60 sheep at \$3.50 each and buys cloth with one-half of the money, and tea at 50 cts. per lb. with the other half, how many lbs. of tea will he buy?

- (4) How many minutes are there in 4 days?
- (5) Find the price of 4 bushels at 10 cts. per quart.
- (6) John had \$1.50, he bought 4 doz. oranges with his money and had 6 cts. left. What was the cost of each orange?

FORM III.—SENIOR SECTION.

- (1) Find the price of 20 rods at 5 cts. per foot.
- (2) Subtract 3 qts. 1 pt. from 5 pecks.
- (3) How many boards 12 feet long are there in a sidewalk 1 mile long, 2 boards wide?
- (4) I mix 12 lbs. of tea at 40 cts. per lb. and 12 lbs. worth 50 cts. per lb. and 60 lbs. worth 30 cts. per lb. If I sell all the tea at 50 cts. per lb., how much do I gain on each lb.?
- (5) In how many weeks of 6 days each will a man earn \$45, if he works 10 hours a day and gets 15 cts. per hour?
- (6) How many weeks will 52 bushels 2 pecks of oats feed 4 horses, if each horse is fed 4 quarts 3 times a day?

FORM IV.—JUNIOR SECTION.

- (1) Find the l. c. m. of 24, 25, 42, 63, 112 and 273.
- (2) Find the value of 1,672 sq. yds. at \$165 per acre.
- (3) A man paid $\frac{1}{2}$ of his money to B, $\frac{1}{3}$ of it to C, and $\frac{2}{3}$ of the remainder to D, and had 15 cts. left. How much had he at first?
- (4) How much is $\frac{1}{2} + \frac{1}{4} + \frac{1}{8}$ greater than $\frac{1}{3} + \frac{1}{6} + \frac{1}{12}$?
- (5) Three men earned \$450. For each dollar the 1st earned the 2nd earned \$2, and for each dollar the 2nd earned the 3rd earned \$3. How much did each earn?
- (6) Simplify $2\frac{1}{2} + 3\frac{1}{3} - 4\frac{1}{4} + 5\frac{2}{3} - 4\frac{5}{6} - \frac{1}{4}$.

FORM IV.—SENIOR SECTION.

- (1) How many ounces are there in .0000575 tons?
- (2) Find the interest on \$4,500 at $7\frac{1}{2}\%$ per annum for 3 months.
- (3) By selling a farm for \$3,240 I gained 20% of the cost. For how much should I have sold it to gain 25% of the cost?
- (4) A takes an average step of $2\frac{1}{2}$ feet and steps once per second. How long will he take in walking $4\frac{1}{2}$ miles?
- (5) Divide \$91.10 among A, B and C so that A may have \$7.80 more than B and \$3.20 less than C.
- (6) How many flag stones 3 ft. by 4 ft. will pave a walk 40 rods long and 2 yds. wide?

GEOGRAPHY.

FORM II.—SENIOR AND JUNIOR SECTIONS.

Specimens of questions asked at the oral examination.

- (1) What is a hemisphere? An island? A continent? A river, etc.?
- (2) Name and point out the continents.
- (3) Between what continents is the Pacific Ocean?

- (4) Where is the Arctic Ocean ?
- (5) Point out the Indian Ocean ?
- (6) Name the continents in the Western Hemisphere.
- (7) Trace the outline of Europe with a pointer on the map of the world.
- (8) What connects North and South America ?
- (9) Point to the north-west corner of the room—to the south side—to the west side of the map, etc.
- (10) What continents touch the Atlantic Ocean ?

FORM III.—JUNIOR SECTION.

- (1) Define continent, ocean, equator, cape, hemisphere, gulf, isthmus, strait.
- (2) Draw an outline map of North America, and mark off the different countries and name them.
- (3) (a) Name the continents of the world.
(b) Name the oceans of the world, and tell where each one is situated.
- (4) Name six of the principal rivers in North America, and tell in what direction each one flows and into what body of water each one empties.
- (5) Name the principal gulfs and bays around North America and tell where each is situated.

FORM III.—SENIOR SECTION.

- (1) Define longitude, strait, plateau, equator and estuary.
- (2) Name the principal bays and gulfs of North America, and tell where each is situated.
- (3) Into what body of water does each of the following rivers flow :—Saugeen, Detroit, Rideau, Madawaska, St. Clair ? Name the chief towns situated on each.
- (4) Name the principal Canals of Ontario and tell what bodies of water they join.
- (5) Name the Counties on Lake Erie and give the County town of each.
- (6) Draw an outline map of the Province of Ontario.

FORM IV.—JUNIOR SECTION.

- (1) Define longitude, axis of the earth, zone, frith, tributary of a river, glacier, volcano, oasis.
- (2) Name the Provinces of Canada, with the Capital of each Province, and tell where the Capital is situated.
- (3) Name the chief productions (1) of Ontario, (2) of New Brunswick, (3) of British Columbia.
- (4) Where are the following :
Rivers—Saguenay, Ohio, Fraser.
Islands—Cape Breton, Sitka, Porto Rico.
Capes—San Lucas, St. Roque, Race.
- (5) Draw an outline map of Ontario and show the position of each of the cities in the Province.

FORM IV.—SENIOR SECTION.

- (1) Where and what are the following :—Bosphorus, Bothnia, Servia, Sicily, Formosa, Delhi, Elburz, Zanzibar, Congo, Tasmania, Quito, Orinoco.
- (2) Name the principal tributaries of the Mississippi river and the states that lie along its western bank.
- (3) Name and give the position of the principal colonies of Great Britain.

- (4) Give the boundaries of the different zones and account for the position of the Tropic of Cancer and the Arctic Circle.
- (5) What is the principal trade carried on between Canada and the United States, and between what cities is this trade carried on?

GRAMMAR.

FORM III.—JUNIOR SECTION.

- (1) Define adverb, conjunction, sentence, predicate.
- (2) Pick out the adverbs in the following and tell the use of each :
 - (a) He always writes a very nice hand.
 - (b) I never saw that large boy before.
 - (c) His answer is now entirely changed.
 - (d) When do you think he will come here again?
- (3) Write three sentences, each containing two adjectives, and tell their use in each case.
- (4) Write three sentences, each containing a pronoun and two adverbs, and tell the use of each adverb.
- (5) Pick out the pronouns and the verbs in the following and draw a line under each :
 - (a) I have never seen his brother before.
 - (b) He says his book is larger than mine.
 - (c) John's dog will lose his collar.
 - (d) When does he think she will return?
- (6) Name the subject and the predicate in each of the following :
 - (a) The tops of the trees are in view.
 - (b) The boy will soon come.
 - (c) I heard his voice far away.
 - (d) Near the fence stands a large tree.

FORM III.—SENIOR SECTION.

- (1) Pick out the adverbs in the following and tell the use of each :
 - (a) When shall I see you again?
 - (b) He is very fond of music.
 - (c) He is less troublesome than he was formerly.
 - (d) I went away and then I returned.
- (2) Pick out the pronouns and the prepositions in the following :
 - (a) We got our sugar from his store on Sparks Street.
 - (b) He went to town in our sleigh.
 - (c) My dear child come with us.
- (3) Write three sentences, each containing two adjectives and two adverbs, and draw a line under each.
- (4) Give three ways by which words are made to denote more than one, and give an example of each.
- (5) Give three ways by which the feminine gender is formed from the masculine, with an example of each way.
- (6) In the following sentences name the subject and the predicate of each :
 - (a) The roof of the house was blown off.
 - (b) When will the hot weather be over?
 - (c) Now I see the way.
 - (d) What a warm day it is.
 - (e) Where did you put my hat?

FORM IV.—JUNIOR SECTION. ENGLISH SCHOOLS.

- (1) In the following sentences pick out the transitive verbs and give the object of each :
 - (a) He never wears a straw hat.
 - (b) He jumped from the roof and broke his arm.
 - (c) When will you lend me your boat?
 - (d) He will never come here again.
- (2) Give the different ways by which an adjective may be changed to denote a higher degree of a quality and also a lower degree.
- (3) Give an adjective and an adverb corresponding to each of the following words : Danger, rashness, height, cruelty, anger.
- (4) Use each of the following words correctly in a sentence : Lie, sit, lay, laid, sat, set, rise, rose, raised, fall, fell.
- (5)—(a) Name two ways by which the subject of a sentence may be modified, with an example of each.
 (b) Give an example of a predicate in a sentence modified by an adverb and by a phrase.
- (6) Name the subject and the predicate in each of the following :
 - (a) Over the top of the mountain I can see the sun.
 - (b) Where will the game be played?
 - (c) At 9 o'clock the last train will start.
 - (d) The boy on the black horse is crazy.
 - (e) What a pretty flower he has.

FORM IV.—SENIOR SECTION. ENGLISH SCHOOLS.

- (1) Define mood, voice, person, complex sentence.
- (2) Give an example of a sentence containing an adjective clause, and of one containing a noun clause used as the subject of a verb.
- (3) Give the different ways in which the grammatical predicate of a sentence may be modified, with an example of each.
- (4)—(a) Change the sentence "who ploughed the field?" to the passive voice.
 (b) Compare farthest, neatly, former, upper, last.
 (c) Give the corresponding gender word for countess, niece, czar, heroine, marquis, empress.
- (5) Correct where necessary and give your reasons in each case :
 - (a) Who will you vote for?
 - (b) Neither you nor he are going.
 - (c) It was I who you saw.
 - (d) I do not know nothing about it.
 - (e) Whom do you think it was?
- (6) Analyze the following and parse the underlined words :

From every stormy wind that blows,

From every swelling tide of woes,

There is a calm, a sure retreat,

'Tis found beneath the mercy seat.

FORM IV.—SENIOR AND JUNIOR SECTIONS. FRENCH SCHOOLS.

- (1) Give four ways in which nouns are changed so that they may denote more than one, and give an example of each way.
- (2) Give the corresponding number words (singular or plural) for the following :
Feet, teeth, child, calf, proof, gulf, wolf, bunches, stomach, potato, folio.
- (3) Give the corresponding gender words (masculine or feminine) for the following :
Madam, miss, earl, niece, hart, doe, marquis, tiger, czarina, shepherd, maid servant.
- (4)—(a) What is the difference between a personal pronoun and a relative pronoun.
(b) Decline *who* and *which*.
- (5) Name the relative pronouns, explain how each is used, and give an example in each case.
- (6) Give two ways in which adjectives are changed to denote a greater degree of quality, with an example of each used properly in a sentence.

HISTORY.

FORM III.

- (1) Tell what you know of Jacques Cartier, Montcalm and Frontenac.
- (2) Write short notes on : The Company of One Hundred Associates, the discovery of America, the Indians of North America.
- (3) When did Canada become a British colony ? Tell briefly the events which led to this change.
- (4) Give the conditions of the Treaty of Montreal, of Aix-la-Chapelle and of Paris.

FORM IV.

- (1) Describe the character of Frontenac and state what influence he had on the French colony in Canada.
- (2) What course did Champlain adopt towards the natives of Canada and wherein was it defective ?
- (3) Tell what you know of the war which was ended by the Treaty of Paris in 1763.
- (4) State the chief conditions of the Treaties of Aix-la-Chapelle and Paris.

FORM IV. (FOR CLASSES WHERE ENGLISH HISTORY HAD BEEN STUDIED)

- (1) (a) Point out the effects of the Norman Conquest.
(b) What is meant by the Feudal System ?
- (2) When did the First Parliament of England meet ? Who summoned it ? What persons composed it ?
- (3) Between what two parties was the Battle of Bosworth fought ? Why was it an important battle ?
- (4) (a) Relate the principal events connected with the discovery of Canada.
(b) Write notes on the Indian tribes of Canada.
- (5) Name the principal officers appointed by the French King to govern Canada and explain the duties of each.
- (6) What is meant by responsible government ? Sketch the events that led to its introduction into Canada.

SPELLING.

FORM I.—SENIOR SECTION. ENGLISH SCHOOLS.

Mark Fox was a boy who would get cross. Then he would say all sorts of rude things to those who could not hurt him. When told that this was wrong he said 'I can not help it.

FORM I.—FRENCH SCHOOLS.

I see my big mug. I see a bug on the bud.

FORM II.—JUNIOR SECTION. ENGLISH SCHOOLS.

The old birds sit by turns. But one brood is raised in a year, and it is a rare thing to see more than three young ones in a brood. The eggs and young birds are good eating, but the old birds are too tough for food.

FORM II.—JUNIOR SECTION. FRENCH SCHOOLS.

Tom has a big cane. Has James a cane? They have their meal in the sacks. But they pray to God and ask him to bless the food.

FORM II.—SENIOR SECTION. ENGLISH SCHOOLS.

At last all things are in place at the sugar camp. The boy can hardly contain his delight that his out door life is about to begin again. For him it is the sweetest life in the world. He boils down the syrup as fast as he can and is apt to burn his sugar, but if he can get enough to make a little wax on the snow or to scrape from the bottom of the kettle he is happy. He wastes a great deal on his hands, his face and his clothes, but he does not care, he is not stingy.

FORM II.—SENIOR SECTION. FRENCH SCHOOLS.

Frank King is proud of Speed, his large hound. See Speed take the bit in his mouth, like a horse or mule. Speed is swift and strong. He can leap a high fence at a bound. He does not know what fear is.

FORM III.—JUNIOR SECTION. FRENCH SCHOOLS.

George Fish is the son of a rich man. He has nice food, fine clothes, and all that he needs. One bright, warm day, George was out at play with his bat and ball. His ball fell in a field of corn, where a poor boy was at work. Throw that ball to me, said he, in a harsh tone. But the boy took no heed of this.

FORM III.—SENIOR SECTION. FRENCH SCHOOLS.

From time to time the man would stop and sing some drole air, while the great clumsy bear stood on his hind legs and danced, and the monkey was so funny and so full of tricks that Bertha also ran out to see him. The children followed the man a long way, but one by one they dropped off and went to their homes, and after a while, Bertha found herself quite out in the country and very tired.

FORM IV.—SENIOR AND JUNIOR SECTIONS. FRENCH SCHOOLS.

But the murmur of the river as it ran did not disturb the peaceful homes where everyone, even the little children earn their brown bread by carving wooden toys and images. But one day a sad sickness came and whoever had it died in a few hours. In their misery and despair they wrung their hands and cried, who can help us, and there seemed no hope. But the old village priest who had cared for and loved his people all his life stretched his hands towards heaven and cried: There is an Almighty Father above us, let us ask his help.

ARITHMETIC.

(Paper set for Highest Class at the Catholic Lyceum).

- (1) A man whose average step is $2\frac{1}{2}$ ft. walked 9 miles in $2\frac{1}{4}$ hrs. How many steps did he make on an average per minute.
- (2) A room is half as long again as it is wide. What fraction of the perimeter is the width?
- (3) What is the time when the hands of a watch are equally distant from the figure four?
- (4) Sold two houses for \$4,000 each. For one I received 20 per cent. more than the cost price and for the other 20 per cent. less than the cost. How much did I gain or lose on the whole?
- (5) A ditch 10 ft. wide at the top and 6 ft. wide at the bottom is to be dug 5 ft. deep. How many cubic yards are dug in every rod in length.
- (6) What must be the face value of a note made June 1st at 3 mos., and discounted the same day at 8 per cent. to produce \$870.

ALGEBRA AND GEOMETRY.

(Paper set for Highest Form of Catholic Lyceum).

- (1) Divide $x^3 + y^3 - z^3 + 3xyz$ by $x + y - z$.
- (2) Factor $x^5 - ax^4 + bx^3 - bx^2 + ax - 1$.
- (3) Solve the equation $(10x - 11)(11 + 2x) + (5x - 11)(11 + 3x) + (7x - 11)(11 - 5x) = 0$.
- (4) Find four consecutive numbers whose sum is 234.
- (5) If two straight lines cut each other, the vertically opposite angles must be equal.
- (6) If in a triangle the perpendicular from the vertex on the base bisect the base, the triangle is isosceles.

C.—INSTRUCTIONS OF THE EDUCATION DEPARTMENT WITH RESPECT TO TEACHING ENGLISH TO JUNIOR FRENCH CLASSES.

I. ORAL WORK.

The teaching of Oral English should begin with the child's first week in school, and the object of making it serviceable and accurate should be kept steadily in view. In the beginning teach through objects, choosing at first those most familiar to the child. In the junior classes the answers of individuals, when correct, should be repeated in concert by all, also separately by some pupils, especially the dull or backward. In all language or object lessons lead pupils to use, as freely as possible, all the English they may have learned, to form their own statements, to vary the form of phrases or sentences, to ask questions, etc., encouraging all such attempts however imperfect they may at first be. With young pupils, correct all mistakes instantly, in a kindly way, and have the proper form repeated and if necessary drilled upon. The teacher should take especial care to endeavor to secure correct pronunciation by setting a good example for imitation, and by giving thorough drill on the difficulties commonly met with, *e.g.*, three, old man, etc., etc., even exaggerating such sounds if necessary. Above all it should be remembered that much of the success in this teaching will depend upon thorough and frequent drills and reviews. For this purpose the teacher should keep a list of all words, phrases or sentences gone over, especially with the junior class. The order in teaching should be as follows :

1. Holding an object in plain view of the class, the teacher gives its name clearly and slowly ; then the pupils pronounce its name (a) after the teacher, (b) without the teacher's help, (c) individually. Other objects are similarly treated, the number depending upon the ability of the class.

2. The teacher pronounces the name and the pupils shew or hold up the object.

3. The teacher shews the object and the name is given by the pupils (a) together, (b) separately.

4. Not too many objects should be given in each lesson, but the teacher should make sure that every child knows (a) the object when named, (b) the name when the object is given, the latter presenting the greater difficulty. Among the objects to be first taken up are (i) things in the school, (ii) familiar things of the home, (iii) parts of the body, (iv) articles of clothing worn by the children, (v) other common objects, *e.g.*: apple, watch, stone, leaf, etc. Later, pictures may be used to teach common animals, vegetables, etc., etc.

5. When the pupil has a fair stock of names, teach simple descriptive words, still by means of objects, *e.g.*: a *short* pencil, a *long* stick, a *small* book, a *large* slate, a *red* dress, a *black* hat, etc. Related or contrasted terms are more easily taught together.

6. *Simple* acts should be performed (a) by the teacher, (b) by the pupils, and described in full statements ; *e.g.*, the teacher, doing the act as he describes it, says : I open the book, I raise the window, I tear the paper, I sit down, etc. Then the class is told to open the book, to raise the window, to tear the paper, to sit down, etc., to shew their understanding of the English sentence. A further step is to have them tell in full (English) statements, what they do. Afterwards the application of these words should be extended by such requests as : open the door ; open the window ; open the desk ; etc. ; raise the slate ; raise the chair ; etc., the pupil describing in English what he is doing.

7. The use of the simple pronouns, he, we, hers, they, etc., should be taught through simple language lessons, *e.g.*, his slate ; my book ; he cleans the board ; you hold the box ; they close the door, etc.

8. In a somewhat similar way the simple prepositions may be taught, *e.g.*, the book is *on* the chair ; *under* the desk ; *beside* the slate, etc.

9. When some little advance has been made, the question and negative forms should be used ; also the plural and possessive forms, the simple past tense and the common

auxiliaries. These should not be taught from a book, or by rules, but should come from proper questioning, *e.g.*, Tell me what he does? (he *writes* on his slate.) What is he doing? (he *is writing*, etc.) What did he do? (he *wrote*, etc.) What has he done? (he *has written*, etc.)

10. Pupils should learn by heart such lists as the days of the week, the months, the numbers (as their arithmetic progresses); also simple pieces in prose and verse, the meaning of which they understand. They should sing Kindergarten songs, performing the actions, etc.

11. After teaching things as wholes, take up their parts, *e.g.*, knife, handle, blade, spring, etc.; chair, back, legs, seat, etc.

12. The spoken English and French words should be associated throughout the course, the teacher giving the word or sentence in one language, and the pupils in the other. The teacher should use English in communicating with the pupils, so far at least as the progress of the class will admit. All explanations or commands given in French might afterwards be repeated in English.

13. These oral lessons should be taken at least twice a day, starting with ten minutes for each, and lengthening the time as the class progresses.

II. WRITTEN WORK; READING AND TRANSLATION.

1. When considerable progress has been made in the oral work, the names of objects, the descriptions of simple actions, etc., should be written on the board, after having been given orally, and the pupils taught to recognize them in that form. Then they should be copied by the pupils and afterwards read to the teacher. Great care should be taken to secure, from the first, large, legible writing, as it makes word recognition more easy.

2. These blackboard exercises may be continued for some time before the pupil is required to read from a book. The teacher may use charts, made by herself, of big sheets of strong paper, using crayon for writing the words, in large hand. The lessons should contain the words and phrases already taught and some new ones, and should not be identical with the lessons in the primer.

3. If the teacher understands the phonic method she should use it after the pupil can recognize readily a fair number of words.

4. But, even if the teacher is unacquainted with phonics, she may greatly facilitate the learning of a number of words by using the board to show their likeness in form, which will easily suggest their likeness in sound; *e.g.*, from *book* it will be easy to teach *look*, *took*, *cook*, etc.; from *chair*, *hair*, *fair*, *pair*, etc. Similarly he might point out simple changes in sound dependent upon changes in form, *e.g.*:

pin, }	hat, }	not, }	etc.
pine, }	hate, }	nete, }	

Also he should thoroughly drill on forms that might be confusing on account of their resemblance, *e.g.*:

from, }	tool, }	though, }	etc.
form, }	toll, }	through, }	
		thought, }	

These words need not be specially sought out but should be used as the lesson supplies or suggests them.

5. Before beginning reading from the book, take a series of object or language lessons to make the pupils acquainted with the subjects of at least the earlier lessons. Knowing the written words from the board, and being familiar with the ideas, the pupils should find little difficulty in these first lessons, especially if the blackboard is freely used.

6. It is most important that, before the reading, the teacher should talk about the lesson, explaining with the pupils' help, the meaning of each particular word or phrase that might present difficulty, putting the new words into other constructions, giving the phrases a different form or using them in more familiar sentences than those in the Reader, paying special attention to idioms, etc., endeavoring in every way to give pupils a clear understanding of the meaning and the construction. So far as the advancement of the class will admit of it, all such explanation should be in English. If the meaning has to be given in French, it would be well to repeat it immediately afterwards in English so that pupils may grasp it in this language also.

7. Where the Bilingual series are used, the French lesson may be taken first, as presenting fewer difficulties.

8. After the reading exercise, the substance of each lesson should be given in the best English the pupil can command. It should be in a connected form, with but few questions from the teacher. Pupils may be encouraged to suggest words or phrases that would be more suitable than those first given, or the teacher may supply them; such corrections should be employed in different sentences till the pupil knows their use.

9. To the third form inclusive, the pupils should copy every English lesson, and the teacher should test their knowledge of such written work.

10. The teacher should write on the board, lists of English words or phrases, previously taught, followed by their French equivalents in parallel columns, to be copied and learned by heart. As a test, the English or the French column may be erased, to be supplied by the pupils on their slates or exercise books.

11. There should be English dictation every day, at first of such words as were written on the board and learned by the class. For the hard words the teacher should write them on the board, directing particular attention to the difficulties each presents (silent letters, etc.), and have them copied on slates by the class. Then erase them from the board and slates and give in dictation. Afterwards phrases or sentences containing these words may be dictated.

12. All errors in such exercises should be written several times in the correct form, and a list of those words most commonly missed, should be kept to review from.

13. Each day the class should learn by heart a portion of the reading lesson, or of certain selected lessons, or of other selections written on the board. The meaning of each should be made clear to the pupils.

14. As the class advances teach the written English forms of the plural, the possessive, the masculine and feminine, the past tense, etc.

15. Sentences that the pupils have given in English describing actions, pictures, etc., should be written on the board and, with the help of the class, the translation of each word put underneath it. In such sentences the order of the words should at first be the same in the two languages. Erase the sentences from the board, dictate the French and have pupils write on their slates the corresponding English from memory. Sentences wherein the order of the words differs in the two languages, should come only after the pupil has had considerable practice.

16. With each reading lesson, whether French or English, there should be considerable oral translation, at first of the easier words and phrases, but gradually increasing in difficulty as the pupil advances, until the whole lesson can be so rendered. In such exercises from the Bilingual series, either one side of the open book should be covered, or else the book be closed. The pupils' own expressions should be preferred to those of the book, if they convey the right meaning. Frequently the teacher should give for translation sentences changed somewhat from those in the lesson, though consisting for the most part of the same words, especially for the junior classes.

17. For the young pupils the translation should be as literal as possible so that they will have some definite meaning for each word. After considerable practice they may be taught to give a variety of expressions or forms, while preserving the meaning; and the English idioms may be introduced *gradually*.

18. Translation should not be confined to the reading lessons, but should include Arithmetic, Geography, History and all school studies.

19. The reproduction of interesting stories will be of great service. If the teacher reads the story in French let the class relate the substance of it in English; if given in English let the pupils tell it in French first and afterwards in English. This reproduction should be oral at first so that all mistakes may be corrected; afterwards it should be written if the pupil is able.

20. The use of a dictionary for assisting in translation should be explained in the senior second form, or earlier if the pupils can profit by it. They require instruction how to choose the proper word and how to tell the pronunciation. Each school should have a standard English dictionary (the Concise Imperial is good), and a large French-English dictionary, as the smaller books commonly used by the pupils are not always reliable or sufficiently complete.

21. Regular written translation should begin at latest in the Junior Second Form, and should receive very careful attention in all classes. The first exercise should be short and simple. They may be taken from the Reader or may be suitable selections from other books; in the latter case they should be written on the board or dictated to the class. Especially in the early lessons it is very advisable to make free use of the board to show the correct form and to simplify all difficulties. Every written exercise should be carefully examined, and be written again if many mistakes are found. There should be at least two such exercises in written translation each day.

Where the Bilingual series are used the teacher should supply himself with other material suitable for translation.

REPORT

OF THE

MINISTER OF EDUCATION

FOR THE YEAR

1895

WITH THE STATISTICS OF 1894.

TO THE HONORABLE GEORGE AIREY KIRKPATRICK, LL.D., Q.C.,
Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOR:

I herewith present the Report of the Education Department for the year 1895, together with the statistics for the year 1894.

SUMMARY OF STATISTICS.

** Elementary Schools.*

Number of Public Schools	5,649
Increase for the year	8
Number of Roman Catholic Separate Schools	328
Increase for the year	15
Number of Protestant Separate Schools	10
Number of Kindergartens	90
Number of teachers.....	184
Number of Night Schools.....	25
Number of teachers	54

* The Curriculum of Elementary Schools embraces the following subjects : Reading, Writing, Arithmetic, Drawing, Geography, Music, Grammar, History, Temperance, Drill, Bookkeeping, Algebra, Geometry, Botany, Physics, Agriculture.

Amount expended (1894) for Public School houses (sites and buildings)	\$373,482
“ “ Public School teachers' salaries	\$2,725,286
“ “ for all other purposes	\$812,056
Total amount expended on Public Schools, 1894	\$3,910,824
Increase	\$130,093
Estimated value of Public School property	\$10,599,439
Number of persons in the Province between the ages of 5 and 21	593,840
Increase for the year	1,337
Number of registered pupils of all ages in the Public Schools during the year	443,441
Increase for the year	440
Average attendance of pupils in the Public Schools during the year	245,006
Increase for the year	7,443
Number of pupils in Roman Catholic Separate Schools	39,762
Increase for the year	1,695
Average attendance of pupils in Roman Catholic Separate Schools	23,328
Increase for the year	1,465
Number of pupils in Protestant Separate Schools	520
Decrease for the year	28
Average attendance of pupils in Protestant Separate Schools	196
Decrease for the year	77
Number of pupils attending Kindergartens	9,340
Increase for the year	573
Average attendance of pupils at Kindergartens	3,681
Increase for the year	419
Number of pupils attending Night Schools	1,937
Decrease for the year	125
Average attendance of pupils at Night Schools	444
Decrease for the year	78
Percentage of average attendance to total attendance in Public Schools	56
Increase for the year	2 per cent.
Number of persons employed as teachers in the Public Schools during the year : Men, 2,662 ; women, 5,448 : total	8,110
Increase for the year : Men, 15 ; women, 132	
Number of teachers who have attended a Normal School	3,168
Increase for the year	88
Number of teachers who have attended a County Model School in 1895	1,834
Increase for the year	252
Average annual salary of male teachers in Public Schools	\$421
Decrease for the year	\$2
Average annual salary of female teachers in Public Schools	\$300
Average number of days the Public Schools have kept open during the year	208
Cost of inspection of Public Schools	\$90,610

** Secondary Schools.*

Number of High Schools (including Collegiate Institutes)	129
Number of teachers in High Schools	554
Increase for the year	16
Number of pupils in High Schools	23,523

* The Curriculum of Secondary Schools includes all the subjects required for matriculation into the University.

I.—SANITARY REPORT.

From my intercourse with the Inspectors and my observations in passing through the country at different times, I became impressed with the fact that many school sites and school premises were not kept in such a sanitary condition as was necessary for the comfort and health of the pupils. In order to get such information as would enable me to deal with the matter either by regulation of the Education Department, or by Act of Parliament, as the circumstances demanded, I caused circulars to be sent to the inspectors, and give at another place the answers in a tabulated form.

The detailed reports will be found very instructive, indicating the necessity for several reforms in sanitation and indicating also the attention and zeal with which the inspectors discharge their duty in this respect. One or two items from the summary report are worthy of notice :

(1) It will be found that those engaged in our Public Schools have reached a degree of mental and physical maturity which should give us the very best service. It is sometimes said that the teaching profession has fallen into the hands of mere boys and girls. This is not so. The average age of the teachers of Ontario is found to be within a fraction of twenty-five years (24.95), and the average years of experience four and three-fifth years. That the teachers of Ontario are persons of regular habits is seen from the fact that the loss of time from illness during the year did not exceed one day per teacher.

(2) The provisions made by Boards of Trustees for the comfort and accommodation of the school population of the Province is very gratifying. Only 490 schoolhouses are reported as furnishing inadequate breathing space for the pupils in attendance. It is to be regretted, however, that better facilities have not been provided for ventilation, and in many cases for heating, although it appears from the reports of the inspectors, that so far the health of the pupils has not suffered materially from the defect. Still under better conditions I do not think that 4,981 pupils would be reported as subject to headaches. The necessity for the greatest attention to ventilation is all the more urgent from the fact that 92,000 pupils take luncheon at school. If the school room is badly ventilated, the injury to health, particularly in winter, should not be lightly regarded. Out of 3,854 schools reported upon, only 613 are said to be inferior. I notice that in 713 school houses the seats are defective. I hope the inspectors will make an effort to overcome the neglect of trustees in this respect at the earliest moment. It would be well also to call attention to the defective blinding of school windows, particularly as 680 pupils are reported as being under the necessity of wearing glasses. This is an inconvenience which is sure to be aggravated by cross lights or by either excessive or defective lighting of school houses. The provision made for washing and sweeping school houses seems very inadequate in many cases. Greater care should be paid by trustees, teachers and inspectors to this elementary part of school sanitation. It is hoped that the next report will not show that 1,920 schools were not white-washed during the year and that over 400 were not swept daily. The defects in the matter of closets are still more serious. The absence of screening, in many cases the want of disinfection, the neglect to make walks in winter, are defects which should receive immediate attention, and could be remedied at a trifling cost. Boards of Health should supplement the efforts of the school authorities in overcoming the objections to which attention is called in the detailed reports contained elsewhere.

II.—PUBLIC SCHOOLS.

1.—SCHOOL POPULATION—ATTENDANCE.

School Population.

The school population of the province, as ascertained through the assessors, is as follows :

Year.	School age.	School population.	Pupils registered under 5.	Pupils registered 5 to 21.	Pupils registered over 21.	Total number of pupils registered.	Average attendance.	Percentage of average attendance to total number attending school.
1867.....	5—16	447,726		*380,511	†21,132	401,643	163,974	41
1872.....	5—16	495,756		*433,664	†20,998	454,662	188,701	42
1877.....	5—16	494,804	1,430	488,553	877	490,860	217,184	44
1882.....	5—16	483,817	1,352	469,751	409	471,512	214,176	45

1877 ..	152,002	108,678	135,824	72,871	19,857	396,006	402,248	153,036	375,951	116,865	168,942	226,977	
1882 ..	164,810	106,229	117,352	71,740	10,357	398,404	419,557	176,432	280,517	150,989	158,694	209,184	33,926
1887 ..	192,361	100,533	108,096	81,984	10,238	466,389	469,445	395,097	316,791	194,754	203,567	270,856	71,525
1892 ..	187,947	96,074	99,345	88,934	13,370	465,516	470,813	435,239	334,947	253,956	220,941	297,331	171,594
1893 ..	185,177	93,448	99,274	88,850	14,319	462,765	467,004	433,610	337,100	259,070	207,145	299,703	178,208
1894 ..	185,115	94,158	98,785	89,497	15,643	466,927	471,904	435,541	338,371	264,896	206,346	303,913	191,406

From the statistics given above it will be seen that the number of pupils in the 4th and 5th Forms has been steadily increasing during the last eleven years. There is also a very gratifying increase in the number studying history, geography, and composition. The provision in the regulations of 1885, whereby Canadian history was made compulsory for entrance to the High Schools, has led no doubt to a better knowledge of these great events which effect the destiny of the Dominion, which cannot fail on account of their importance, to be stimulating to the patriotism of all pupils attending the schools of the province.

Temperance and Hygiene.

It is also worthy of notice that the number of pupils receiving instruction in temperance and hygiene has increased from 33,926 in 1882, to 191,406 in 1894, or an increase of 470 per cent. Having regard to the great importance of the knowledge of physiology and the injurious effects of alcoholic stimulants on the human system, provision was made by statute in 1886 for placing this subject on the course of study for Public Schools. Instruction was also provided under departmental regulation for teachers-in-training at County Model Schools and Normal Schools, to be followed by an examination as an essential pre-requisite to their final recognition as duly qualified teachers. In 1893, this subject was made compulsory for entrance to High Schools and Collegiate Institutes, so that no pupil who pursues his studies as far as the 5th Form can fail to be reasonably well acquainted with the conditions on which his health and physical vigor depend, as well as with the dangerous tendency of stimulants and narcotics to produce weakness and disease.

To meet the necessities of this change in the course of study, a new text book was authorized by the Education Department and generally received as suitable for its intended purpose. To pupils not sufficiently advanced to use a text book, instruction is given orally at least one hour per week.

Kindergartens.

The system of kindergarten instruction, first introduced into Ontario in 1882, and subsequently made part of the school system of the province by the Public Schools Act of 1885, has met with encouraging success. A report of the pupils receiving instruction in this way was first made in 1892. This report showed that in the short space of ten years, 66 kindergartens were established with 160 teachers, attended by 6,375 children under 6 years of age. In 1894 the number of kindergartens had increased to 90, with 184 teachers, attended by 9,340 pupils under 6 years of age.

Night Schools.

The whole number of Night Schools aided in 1894 was 25, the number of teachers 54, and the number in attendance 1,937. This number does not include the attendance upon the classes established by Mechanics' Institutes and Art Schools.

3.—TEACHERS' CERTIFICATES.

Teachers' Certificates—Summary from 1867 to 1894

IV.—PROTESTANT SEPARATE SCHOOLS.

There has been no increase in the Protestant Separate Schools during the last year. The complete list is as follows :

Anderdon, No. 6 Bromley, No. 9 Cambridge, No. 1 Marlboro', No. 2 Osgoode, No. 6 Plantagenet North, Puslinch, Rama, L'Orignal, Penetanguishene.

They were attended by 520 pupils. The whole amount expended for their maintenance was \$5,222. Two teachers held a Second Class Certificate, six a third, and five were holders of a temporary certificate.

V.—HIGH SCHOOLS.

(Including Collegiate Institutes.)

1.—RECEIPTS, EXPENDITURE, ATTENDANCE, ETC.

The following statistics respecting High Schools will be found suggestive :

Year.	Schools open.	Teachers.	Receipts.			Expenditure.			Pupils.	Percentage of average attendance to total attendance.	Cost per pupil.
			Amount of fees.	Legislative grant.	Total receipts.	Paid for teachers' salaries.	Paid for sites and building school-houses, rents and repairs.	Total expenditure.

Classification.

From a study of the classification of the High Schools and Collegiate Institutes, two or three very striking changes in the tendency of higher education may be worthy of notice. For instance, in 1867, only 1,283 pupils or 23 per cent. of the whole number studied commercial subjects such as Bookkeeping; in 1894 this subject was taken by 15,101 pupils or 65 per cent. of the whole attendance. In 1867, 5,171 pupils or 90 per cent. of the whole attendance studied Latin; in 1894 the number of pupils in Latin was 9,316 or only 40 per cent. of the number in attendance. In 1867, 15 per cent. studied Greek; in 1894 only 5 per cent. were engaged in studying this subject. In 1867, 38 per cent. of pupils studied French and none studied German; in 1894 these numbers had increased to 45 per cent. and 12 per cent. respectively. There also has been a large increase in the number studying Drawing; the total in 1867 being 676, and in 1894 14,827. Phonography is taught in 21 schools to 1,467 pupils. Music is taught in 6 schools.

Matriculation.

Perhaps the best test of High School work is that of matriculation into the universities of the province. The number of pupils who passed this test successfully in 1867 was 56, and in 1894, 482.

Diffusion of High School Education.

When the High School system of the province was first inaugurated, its primary object was to prepare pupils for the learned professions and especially for the University. While in that respect our High Schools amply fulfil their original purpose, in later years the course of education which they provide has been considered a desirable qualification for various other pursuits in life. Many young men in preparing for mercantile life or for agriculture take advantage of the High School, perhaps not so much because of the direct training which it gives for their intended calling as for the superior culture which it provides. In 1872, 486 High School pupils, when they finished their High School education, entered mercantile life. In 1894 the number had increased to 1,036. Similarly, 300 High School pupils left the High School for agricultural pursuits, and in 1894, 934 pupils pursued a similar course. In all, the High Schools gave to mercantile life and to agriculture in 1894 1,970 pupils of well-recognized educational standing, and to the Universities and the learned professions the same year, 951. The whole number who left the High School for mercantile life since 1872 was 18,709, and for agriculture, 14,486.

VI.—DEPARTMENTAL EXAMINATIONS.

ENTRANCE EXAMINATIONS, 1887-1895.

	Candidates examined.	Candidates passed.
1877.....	7,383	3,836

VIII.—TECHNICAL EDUCATION, MECHANICS' INSTITUTES, FREE LIBRARIES, ART SCHOOLS AND SCIENTIFIC SOCIETIES.

The progress of Mechanics' Institutes and Free Libraries within an interval of twelve years, from 1883 to 1895, has been very gratifying. The number of these institutions reporting have increased from ninety-three to 301, the number of volumes in libraries has increased from 154,093 to 604,719, and the number of books circulated has increased from 251,920 to 1,687,806. During the same period there has been a great improvement in the class of literature read, with a corresponding decrease in the demand for works of fiction.

Under the Act respecting Public Libraries, which came into force on the 1st of May, 1895, every Mechanics' Institute is called a Public Library, and every Mechanics' Institute in a city, town, or incorporated village can be handed over to a municipality and changed into a Free Public Library without the necessity of passing a by-law to be voted on by the people.

Public Libraries which prefer continuing the old method of raising funds for their support from members' subscriptions may continue to do so, and persons over twelve years of age may become members and entitled to all the privileges of membership except the right of voting at meetings for the election of the board of management.

From 1883 to 1895 the Mechanics' Institutes and Free Libraries have issued 9,863,563 volumes, and their total receipts for all purposes amounted to \$1,365,530.

ABSTRACT SHOWING THE PROGRESS OF MECHANICS' INSTITUTES AND FREE LIBRARIES FROM 1883 TO 1895 INCLUSIVE.

I.—Mechanics' Institutes.

IX.—ARBOR DAY.

The efforts made by the Department to secure the planting of shade trees and the cultivation of flowers in the school grounds, were heartily supported by teachers and trustees. Arbor Day has now become one of the most interesting and profitable holidays of the year. In 1885, 33,940; in 1886, 34,037; in 1887, 25,057; in 1888, 25,714; in 1889, 21,281; in 1890, 22,250; in 1891, 15,697; in 1892, 14,489; in 1893, 14,103; and in 1894 14,244 trees were planted.

X.—DOCUMENTARY HISTORY OF EDUCATION IN ONTARIO.

It gives me great pleasure to announce that the third volume of the Documentary History of Education in Ontario will be distributed during the present session. This volume brings down the history of our schools to the year 1840, and with the two volumes previously issued supplies the fullest information respecting the evolution of our school system, and the difficulties encountered by the early pioneers of education in preparing the public mind for the legislation under which it is now practically organized. Dr. Hodgins, the author, and the Historiographer to the Department, deserves the highest praise for his untiring industry in collecting the material which these volumes contain. His long connection with the Department, extending now over fifty years, specially qualifies him for this work, and no person who has followed the narrative can fail to see that it was written with a skilful hand, and with the enthusiasm of a man thoroughly acquainted with the various matters with which he was called upon to deal.

I have the honor to be,

Your Honor's obedient servant,

EDUCATION DEPARTMENT,
TORONTO, January, 1896.

GEO. W. ROSS,
Minister of Education.

APPENDICES.

APPENDIX A.

STATISTICAL TABLES.

I.—TABLE A.—The

Counties. (Including incorporated villages, but not cities or towns.)	School population.—Pupils					
	School population be- tween 5 and 21 years of age.	Pupils under 5 years of age.	Pupils between 5 and 21 years of age.	Pupils over 21 years of age.	Total number of pupils of all ages attending school.	Boys.

III.—CIRCULARS FROM THE MINISTER.

DEPARTMENTAL REGULATIONS.

HIGH SCHOOLS AND COLLEGIATE INSTITUTES.

High School Entrance and Public School Leaving Examinations.

I. ENTRANCE EXAMINATION.

The Entrance examinations to High Schools and Collegiate Institutes will be held on dates to be fixed by the Minister of Education. The following is the limit of studies in the various subjects:—

Reading.—A general knowledge of the elements of vocal expression, with special reference to emphasis, inflection and pause. The reading, with proper expression, of any selection in the Fourth Reader. The pupil should be taught to read intelligently as well as intelligibly.

Literature.—The object of the study is to secure the pupil's intelligent comprehension of and familiarity with the lessons in the Reader. To this end, he should be taught to give for words or phrases, meanings which may be substituted therefore, without impairing the sense of the passage; to illustrate and show the appropriateness of important words or phrases; to distinguish between synonyms in common use; to paraphrase difficult passages so as to show the meaning clearly; to show the connections of the thoughts in any selected passage; to explain allusions; to write explanatory or descriptive notes on proper or other names; to show that he has studied the lessons thoughtfully, by being able to give an intelligent opinion on any subject treated of therein that comes within the range of his experience or comprehension; and especially to show that he has entered into the spirit of the passage, by being able to read it with proper expression. He should be required to memorize passages of special beauty from the selections prescribed, and to reproduce in his own words, the substance of any of these selections, or of any part thereof. He should also obtain some knowledge of the authors from whose works these selections have been made.

Orthography and Orthoëpy.—The pronunciation, the syllabication, and the spelling from dictation, of words in common use. The correction of words improperly spelled or pronounced. The distinction between words in common use in regard to spelling, pronunciation, and meaning.

Geography.—The form and the motions of the earth. The definitions as contained in the authorized text-book; divisions of land and water; circles of the globe; political divisions; natural phenomena. Maps of America, Europe, Asia and Africa. Maps of Canada and Ontario, including the railway systems. The products and the commercial relations of Canada.

Grammar.—The sentence; its different forms. Words; their chief classes and inflections. Different grammatical values of the same word. The meanings of the chief grammatical terms. The grammatical values of phrases and of clauses. The government, the agreement and the arrangement of words. The correction, with reasons therefor, of wrong forms of words and of false syntax. The parsing and analysis of simple sentences.

Composition.—The nature and construction of different kinds of sentences. The combination of separate statements into sentences. The nature and the construction of paragraphs. The combination of separate statements into paragraphs. Variety of expression, with the following classes of exercises: changing the voice of the verb; expanding a word or a phrase into a clause; contracting a clause into a word or a phrase; changing from direct to indirect narration, or the converse; transposition; changing the form of a sentence; expansion of given heads or hints into a composition; the contraction of passages; paraphrasing prose; the elements of punctuation. Short narratives or descriptions, and familiar letters, to which most attention should be given.

At the examination in Composition the candidate will be expected simply to write a letter and a narrative or description, each being of about thirty lines in length.

History.—The outlines of Canadian history generally, with particular attention to the events subsequent to 1841. The municipal institutions of Ontario, and the Federal form of the Dominion Government. The outlines of British history shall also be taught without a text-book; there will be questions in British history at the High School Entrance examination.

Arithmetic.—Numeration and notation; the elementary rules; greatest common measure and least common multiple; reduction; the compound rules; vulgar and decimal fractions; elementary percentage and interest.

Writing and Drawing.—Candidates will submit their copy-books, authorized copy-book No. 6, showing their work in writing for at least three months, and their Drawing book No. 5. Drawing and Writing in any blank exercise book will be accepted, so long as the work covers the prescribed course, and no discrimination will be made in favor of the work contained in the authorized drawing books or copy-books.

Physiology and Temperance.—Digestion, respiration, the circulation of the blood, and the nervous system. The effects of alcohol and narcotics. Exercise; cleanliness.

Values of Subjects.

Reading, 50 marks; Drawing, 50; Physiology and Temperance, 75; Writing and Neatness, 35; Writing, 50; Orthography, 30; Literature, 100; Arithmetic, 100; Grammar, 100; Geography, 75; Composition, 100; History, 75. The marks for neatness shall be divided equally among the last seven subjects, and shall be added to the value herein assigned to those subjects. Of the marks for Drawing and Writing 25 will be assigned to the paper on these subjects, and a maximum of twenty-five may be awarded as the result of the inspection of the candidate's drawing and copy-books. Two marks shall be deducted for each mis-spelt word on the Dictation paper, and one mark shall be deducted for each mis-spelt word on the other papers.

II. PUBLIC SCHOOL LEAVING EXAMINATION.

The Public School Leaving Examination will be held on the same dates as the High School Entrance Examination and at the same places. The following is the limit of studies in the various subjects:—

Reading.—A general knowledge of the principles of orthoëpy and of elocution; reading, spelling and syllabication.

Grammar and Composition.—Etymology and syntax; exercises chiefly on passages from prose authors not prescribed; themes on familiar subjects; familiar and business letters.

English Poetical Literature.—Intelligent comprehension of and familiarity with the prescribed selections; memorization of the finest passages; oral reading of the selections.

History and Geography.—The leading events of British History—the nineteenth century more particularly. Commercial and physical geography. Geography of Canada and the British Empire more particularly.

Arithmetic and Elementary Mensuration.—Arithmetic in theory and practice; special attention to commercial problems; insurance, simple and compound interest; averaging accounts; discount, stock, bonds and partnership; area of rectilinear figures.

Algebra.—Elementary rules; fractions; simple equations of one unknown quantity; simple problems.

Euclid.—Book I, propositions 1-26; easy deductions.

Commercial Course.—Writing; book-keeping, single entry; commercial forms; general business transactions.

Drawing.—Drawing book No. 6.

Physiology and Temperance.—The course in the Fourth Form continued and including also the other subjects in the text-book.

(1) Each candidate shall submit for examination his school work in book-keeping and commercial transactions, to the extent of one set at least of ten foolscap pages or the equivalent thereof, comprising the necessary books of original entry with cash book, journal, ledger and bill-book. The set shall be specially suitable for farmers and artisans, or for retail merchants and general traders. Three accounts shall be made from the set in proper form and submitted to the examiners. The candidates shall also submit at least two examples of each kind of commercial forms and correspondence pertaining to the set. A descriptive index shall accompany the set, and the transactions in the set worked out in a school shall be different from year to year.

(2) It is recommended that candidates for the Public School Leaving Examination, who intend to enter a High School shall, before doing so, pass also the High School Primary Examination in Reading, Drawing and the Commercial Course.

(3) In Drawing, candidates will submit Book No. 6 of the Drawing course prescribed for Form V., which book may be substituted for one of the Drawing books prescribed for the High School Primary Examination in Drawing, Reading, etc., in the case of candidates prepared at Public Schools for both this examination and the Public School Leaving Examination. Such book and the work submitted in Book-keeping shall be certified by the candidate's teacher or teachers as being the work of the candidate.

(4) At the examination in Composition, candidates will be required to write an essay or a letter about sixty lines in length.

(5) The paper on Literature will be based partly on "Sight work," and partly on one or more passages from prescribed selections.

Values of Subjects.

(6) In reading the papers the examiners shall be guided by the following schedule of marks and instructions: Arithmetic and Mensuration, 200; Euclid and Algebra, 150; English Grammar, 150; English Poetical Literature, 150; English Composition (Essay or Letter), 100; History, 100; Geography, 100; Book-keeping and Penmanship, 100; Physiology and Temperance, 75; Drawing, 50; Reading, 50.

(7) Of the marks for Book-keeping and Drawing, one-half will be assigned to the paper on the subject and the other half may be awarded by the examiners as the result of the inspection of the candidate's work submitted in Book-keeping and Drawing.

SELECTIONS FOR LITERATURE.

ENTRANCE.

From the Fourth Book.

1896.

- Lesson III. Loss of the Birkenhead.
- Lesson XI. The Evening Cloud.

EDUCATION DEPARTMENT,
 Toronto, 1895.

* DEPARTMENTAL REGULATIONS.

GRANTS TO SCHOOLS IN NEW AND POOR TOWNSHIPS.

82.—All sums of money appropriated by the Legislative Assembly in aid of schools in the unorganized districts, or for the relief of weak schools generally, shall be distributed by the Minister of Education subject to the following conditions:—

(1) That a school section with definite boundaries has been established under the authority of the Public Schools Act, 1891.

(2) That trustees have been elected and suitable accommodation provided for all resident pupils.

(3) That a teacher holding a valid certificate has been employed for at least six months of the year.

(4) That the half-yearly and yearly reports have been sent to the Inspector in the prescribed forms and certified by him as satisfactory.

(5) That the financial condition of the section, because of its limited area, its depressed agricultural condition, its recent settlement, its remoteness from markets and railway accommodations or any exceptional cause, clearly establish the inability of the ratepayers to bear the ordinary burdens of taxation for school purposes.

82.—(a) In townships under County organization the Inspector shall submit to the County Council at the regular meeting thereof in January or June of each year, a list of the schools in his Inspectorial Division where the assessments for school purposes are insufficient for the proper maintenance of the school, and shall indicate in each case any special reason why the statutory grants for school purposes should be supplemented by the County Council.

82.—(b) All schools receiving special grants, either from Township or County Councils, shall receive from the Poor School Fund voted by the Legislature the equivalent of such special grant, provided the sum voted by the Legislature is sufficient. When the Legislative grant is not sufficient to admit of paying the equivalent of this county or township grant, then such grant shall be made *pro rata*.

82.—(c) No grant shall be made to schools in any township under County organization when the Municipal Council of the township or the county has neglected or refused to give special aid as provided in section 112 of the Public Schools Act, unless the report of the Inspector shows that the taxation for school purposes is excessive and that a special grant is necessary for the efficient maintenance of the school section concerned.

82.—(d) All regulations heretofore adopted by the Education Department with respect to Poor Schools are hereby repealed.

EDUCATION DEPARTMENT,
Toronto, February, 1895.

KINDERGARTEN CERTIFICATES, EXAMINATIONS AND SYLLABUS.

1.—(1) No person shall be appointed to take charge of a Kindergarten in which assistant teachers or teachers-in-training are employed, who has not passed the examination prescribed for Director of Kindergartens; and no person shall be paid a salary or allowance for teaching under a Director who has not passed the examination prescribed for assistant teachers.

(2) No person shall be admitted to the course of training prescribed for assistants who is not seventeen years of age and who does not hold a primary certificate, or who has not spent at least three years in a High School. No person shall be admitted to the course prescribed for Directors unless such person has obtained an Assistant's certificate.

(3) Any person who attends a Kindergarten for one year and passes the examinations prescribed by the Education Department shall be entitled to an Assistant's certificate; and the holder of an Assistant's certificate, shall, on attending a Provincial Kindergarten one year and on passing the prescribed examinations, be entitled to a Director's certificate.

(4) Any person holding a Second Class Certificate, shall, on attending a Provincial Kindergarten one year and passing the examinations required by the Education Department, obtain a Director's certificate.

(5) The Minister of Education, may, at his discretion, accept the certificate of any other training school for Kindergarten work, as the equivalent of the Departmental Kindergarten examinations, or he may limit Kindergarten certificates to any city or town, as he may deem expedient.

EXAMINATIONS.

2.—(1) The Minister of Education shall prescribe the time and place for Kindergarten examinations, and shall appoint such Examiners in the Theory and Practice of Kindergarten work as he may deem expedient. The examination for Directors shall embrace the General Principles of Fröbel's System, 150 marks; Theory and Practice of the Gifts and Occupations, 100 marks; Mutter and Kose-Lieder, 100 marks; Miscellaneous Paper, 100 marks; Practical Teaching, 500 marks; and Book-work for those taking one year's course, 400 marks. The examination for Assistants shall embrace the Theory and Practice of the Gifts, two papers; Theory and Practice of the Occupations, one paper; Miscellaneous Paper, each paper, 100 marks; Book-work, 400 marks.

(2) The Director of each Kindergarten sending up candidates to the examination for Assistants' certificates shall be required to certify to the Education Department that the Pease-work and Modelling have been satisfactorily completed.

COURSE OF STUDY FOR KINDERGARTEN ASSISTANTS.

KINDERGARTEN GIFTS.

At the conclusion of the first year's course of training, candidates for Assistant's certificates should be qualified to explain the gifts, their general objects as well as their specialties; how they are graded and why; their connection with other branches of Kindergarten work; also a full explanation of the general method of the Kindergarten and how applied in exercises with the gifts. As the gifts have a mathematical foundation, a knowledge of the elements of geometry will be required.

1st Gift (Balls):

A series of songs that may be used in connection with exercises given with 1st Gift. Not less than twelve songs. Classify these songs and give a lesson illustrating each characteristic. Practical work to be submitted in Gift Book.

2nd Gift (Ball, Cube, Cylinder):

A series of songs that may be used in connection with exercises given with the 2nd Gift. Not less than ten songs. Classify songs and give a lesson illustrating each characteristic. Practical work to be submitted in Gift Book.

3rd Gift (Building):

(a) Lists of two series, forms of life. Not less than twelve forms in each list.

(b) Three sequences, forms of beauty. Not less than twelve forms in each sequence. Practical work to be submitted in Gift Book.

4th Gift (Building):

- (a) List of two series, forms of life. Not less than twelve forms in each list.
- (b) Two sequences, forms of beauty. Not less than twelve forms in each sequence.
- (c) Building problems for estimating dimensions, cubic contents, etc. Not less than eight in the list.
- (d) Exercises illustrating balance, surface representation, communicated motion, etc. Practical work to be submitted in Gift Book.

5th Gift (Building):

- (a) A list of forms of life. Not less than twelve.
- (b) Two sequences, forms of beauty. Not less than eight forms in each sequence.
- (c) Five sequences, forms of knowledge.
 - 1. Geometrical forms.
 - 2. " "
 - 3. " "
 - 4. Fractional divisions, 3rds, 9ths, 27ths.
 - 5. " " 3rds, 6ths, 12ths.
- (d) Development of mathematical prisms.
 - 1. Square prisms.
 - 2. Triangular prisms.
- (e) Suggestions for different kinds of numerical exercises that may be given with 5th Gift. Practical work to be submitted in Gift Book.

6th Gift (Building):

- (a) A list of forms of life. Not less than twelve forms in the list.
- (b) Two sequences, forms of beauty. Not less than eight forms in each sequence.
- (c) Building problems. Not less than fourteen in the list. Practical work to be submitted in Gift Book.

7th Gift (Tablets):

- I. Description, derivation, definition.
- II. Positions of one tablet.
- III. Relative positions of two tablets.
- IV. Mathematical figures that may be produced by combining two tablets.
- V. Mathematical figures produced by combining three tablets.
- VI. Life forms with one tablet. Not less than five named.

"	two tablets	"	drawn.
"	four	"	"
"	eight	"	"
"	sixteen	"	"
"	thirty-two	"	two "

Two miscellaneous forms of life.

VII. Forms of beauty :

- (a) From a given centre. Not less than two forms.
- (b) Repetition. Not less than two forms.
- (c) In sequence " sequences.

VIII.—1. Development of all mathematical figures to three sizes.

- (a) Triangles.
- (b) Squares.
- (c) Oblongs.
- (d) Rhomboid.
- (e) Rhomb.
- (f) Trapezoid.
- (g) Hexagon.
- (h) Octagon.

2. Irregular polygons.

IX. Comparison of mathematical figures, formed from a given number of tablets.

Practical work to be submitted in Gift Book.

8th Gift (Sticks):

Assistants must submit not less than five forms with each number of the following combinations:

- I.—1. (a) Combinations of sticks into life forms, using two sticks, even lengths.
- (b) Combinations of sticks into life forms, using three sticks, even lengths.
- (c) Combinations of sticks into life forms, using four sticks, even lengths.
- (d) Combinations of sticks into life forms, using five sticks, even lengths.
- (e) Combinations of sticks into life forms, using six sticks, even lengths.
- (f) Combinations of sticks into life forms, using seven sticks, even lengths.
- (g) Combinations of sticks into life forms, using eight sticks, even lengths.
- (h) Combinations of sticks into life forms, using nine sticks, even lengths.
- (i) Combinations of sticks into life forms, using ten sticks, even lengths.
- 2. Life forms with sixteen sticks, even lengths. Not less than five forms.
- 3. Forms of life, using sticks of any length. Not less than five forms.

II. Forms of beauty:

- (a) From a given centre. Not less than two forms.
- (b) Repetition. “
- (c) In sequence. “ sequences.

Practical work to be submitted in Gift Book.

9th Gift (Rings):

- I. (a) Relative position of one large and one small ring.
 - (b) “ “ ring of the three sizes.
 - (c) Position of one half-ring.
 - (d) Relative position of two half-rings.
 - (e) “ “ one half-ring and one whole ring.
 - II. (a) Life forms with one ring. Not less than five named.
 - (b) “ “ five rings “ drawn.
 - (c) “ “ ten “ “
 - (d) “ “ four half-rings. “ “
 - (e) “ “ eight “ “
 - (f) “ “ twelve “ “
 - (g) Miscellaneous forms of life with rings, half-rings and quarter-rings. Not less than three drawn.
- Forms of beauty, using rings, half-rings and quarter-rings. Not less than three forms.

Practical work to be submitted in Gift Book.

Slats (First School).

1. Fan.
2. Windows (squares illustrated).
3. Gate (oblong illustrated).
4. Picture frame.
5. Fish (rhomb).
6. Nine rhombs.

• *Slats (Second School) :*

1. Three-pointed star.
2. Five " (pentagon).
3. Six " (hexagon).
4. Seven " (heptagon).
5. Eight " (octagon).
6. Ten "
7. Twelve "

Two inventions.

Practical work submitted in Gift Book.

Kindergarten Occupations.

Assistants must be qualified to explain the use of the Kindergarten occupations, their connections with other branches of the work, the application of the general method to the exercises given with them.

Sewing :

Illustrate a school of sewing, comprising not less than fifty different figures, logically connected and illustrating the following lines and their combinations :

- (a) Vertical lines.
- (b) Horizontal lines.
- (c) Slanting lines of all orders.
- (d) Curves.

Practical work to be submitted in Gift Book.

Rules for sewing inventions :

1. Vertical and horizontal lines of one length.
 - (a) A form of life.
 - (b) " beauty.
2. Vertical and horizontal lines of two lengths.
 - (a) A form of life.
 - (b) " beauty.
3. Vertical and horizontal lines of one and two lengths.
 - (a) A form of life.
 - (b) " beauty.
4. Slanting lines, first order, one length.
 - (a) A form of life.
 - (b) " beauty.
5. Slanting lines of the first order, two lengths.
 - (a) A form of beauty.
6. Slanting lines, first order, one length, combined with vertical and horizontal lines, one length—form of beauty.
7. An invention in all elements thus far given.
8. Slanting lines, second order, one length.
 - (a) A form of life.
 - (b) " beauty.

9. Slanting lines, first and second orders combined, one length, form of beauty.
 10. An invention in all elements thus far given.
 11. " quarter curves.
 12. " half "
 13. " circles.
 14. Two inventions, using quarter curves, half curves and circles.
 15. An invention in all elements thus far given.
 16. Four miscellaneous inventions, either life or beauty.
- Practical work to be submitted in Occupation Books.

Drawing :

- I. Combine five vertical lines from one to five lengths into a triangle.
 - II. Repeat this triangle in four different positions.
 - III. Combine these four triangles into
 - (a) A solid figure.
 - (b) A hollow figure.
 - (c) Two intermediate figures.
 - IV. From the solid and hollow figures form four limbs :

First limb.—Place the lower half of the solid figure below the lower half of the hollow figure.

Second limb.—Place the upper half of the solid above the upper half of the hollow figure.

Third limb.—Place the right half of the solid to the right of the right half of the hollow figure.

Fourth limb.—Place the left half of the solid to the left of the left half of the hollow figure.
 - V. Combine these four limbs into a large solid figure, reversing the position of the limbs, combine them into a large hollow figure.
 - VI. From the four original triangles make two twisting figures.
 - VII. From these twisting figures make two limbs thus :

By placing the right half of each figure to the left of the left half of the same figure.
 - VIII. Using each of these limbs twice, make two large figures. In the first figure the original solid will appear, in the second figure the original hollow will appear.
 - IX. Repeat these eight rules in—
 - (a) Horizontal lines.
 - (b) Right angles.
 - (c) Squares without, to three sizes, combined vertically and horizontally.
 - (d) Slanting lines, first order.
 - (e) Slanting lines, all orders.
 - (f) Half circles.
 - (g) Circles.
- Practical work to be submitted in Occupation Book.

Drawing inventions :

- 1st Set:—1. Vertical lines, one length.
- (a) A form of life.
 - (b) " beauty.
2. Vertical lines, all lengths.
- (a) A form of life.
 - (b) " beauty.
3. Horizontal lines, one length.
- (a) A form of life.
 - (b) " beauty.

4. Horizontal lines, all lengths.
 - (a) A form of life.
 - (b) " beauty.

- 2nd Set:—
1. Vertical and horizontal lines of all lengths, touching at one point.
 2. " " " one length, " two points.
 3. " " " all lengths, " three "
 4. " " " " " four "
 5. " " " " " five "

- 3rd Set:—
1. Slanting lines, 1st order, all lengths, not touching.
 2. " " " touching at one point.
 3. " " " " two points.
 4. " " " " three "
 5. " " " " four "
 6. " " " " five "

- 4th Set:—
1. Disconnected squares, all lengths.
 2. Squares of all lengths, sides touching.
 3. " " corners touching.
 4. All elements thus far given.
 5. Squares combined with vertical and horizontal lines.
 6. Squares using all lengths. Form of life.
 7. Right isosceles triangles, all sizes.
 - (a) A form of life.
 - (b) " beauty.
 8. Equilateral triangles, all sizes.
 - (a) A form of life.
 - (b) " beauty.
 9. Obtuse isosceles triangles, all sizes.
 - (a) A form of life.
 - (b) " beauty.
 10. Scalene triangles, all sizes.
 - (a) A form of life.
 - (b) " beauty.
 11. All triangles combined.
 - A form of beauty.
 12. Two inventions in quarter circles.
 13. " " half "
 14. " " circles.
 15. An invention in quarter circles, half circles, and circles, combined, all sizes.
 16. All elements thus far given.
 17. Four miscellaneous inventions.
 18. Three freehand sketches suitable for children's coloring.
 19. Three freehand sketches illustrating morning talks or songs.

Coloring (crayons or water colors.)

1. A sequence of forms showing development and combination of color.
2. Inventions in geometric forms, combined into figures, and borders, not less than three forms.
3. Three pictures suitable for illustration. Practical work submitted in occupation book.

Mat Weaving :

1st Set :—Wide and narrow strips alternated.

1. 1 up, 1 down, taking narrow with narrow and wide with wide.
2. 1 " 1 " taking narrow with wide and wide with narrow.
3. 2 " 2 "
4. 1 " 2 "
5. 2 " 1 "
6. 2 " 2 " diagonally.
7. 2 " 1 " "
8. 2d'wn 1 up, "

2nd Set :—Strips of equal width.

1. 1 up 1 down.
2. 2 " 2 "
3. 2 " 1 "
4. 2 " 1 " 1 up 2 down.
5. 2 " 1 " 1 " 1 "
6. 3 " 3 "
7. 3 " 1 "
8. 3 " 2 "
9. 3 " 1 " 1 " 1 "
10. 1 d'wn, 2 up, in steps of four.
11. 1 " 2 " continued steps from right to left.
12. 1 " 2 " " " left " right.
13. 1 " 2 " " " reversed.
14. 1 " 2 " angles to centre.
15. 1 " 2 " " outward.
16. 2 " 2 " in steps of three.
17. 2 " 2 " continued steps from right to left.
18. 2 " 2 " " " left " right.
19. 2 " 2 " " " reversed.
20. 2 " 2 " angles to centre.
21. 2 " 2 " " outward.
22. 2 up, 1 down, 1 up, continued steps from right to left.
23. 2 " 1 " 1 " " left " right.
24. 2 " 1 " 1 " " reversed.
25. 3 " 1 " 1 " 1 down " from right to left.
26. 3 " 1 " 1 " 1 " left to right.
27. 3 " 1 " 1 " 1 " reversed.
28. Combination of twos, threes and ones, in steps. Practical work for occupation book.

Mat Inventions :

1. Two inventions in twos.
2. " " " twos and ones.
3. " " " threes.
4. " " " threes and ones.
5. " " " threes and twos.
6. " " " threes, twos and ones.
7. Six miscellaneous inventions. (Forms of Beauty.)

*Folding.***I. Folding (salt-cellar, ground form).**

1. Salt-cellar.
2. Star.
3. King's crown.
4. Queen's crown.
5. Pepper box.
6. Satchel.

II. Folding (double salt-cellar, ground form).

1. Cap.
2. Muff.
3. Boots.
4. Bobbin.
5. Shirt.
6. Trousers.

III. An original sequence of life forms, not less than six forms.

IV. Folding (tablecloth, ground form).

1. Tablecloth.
2. Table.
3. Handkerchief case.
4. Windmill.
5. Vase.
6. Sail boat.
7. Double boat.
8. Loose box.
9. Tight box.
10. Picture frame.

V. Six miscellaneous inventions in life forms. Practical work for occupation book.
Folding (salt-cellar, forms of beauty).

The fundamental form is given and by a change in three directions, various forms are produced :

- (a) From without, turned inward.
- (b) From within, turned outward.
- (c) Combination.

From these rules form two sequences forms of beauty, not less than six forms
Tablecloth forms of beauty.

The tablecloth forms of beauty consist of five modifications :

- (a) Hexagon.
- (b) Trapezium, from within turned outward.
- (c) " " without " inward.
- (d) Rhomb.
- (e) Rhomboid.

Inventions required :

- 1 Eighteen inventions from salt-cellar, ground form.
2. " " " tablecloth, "
3. One combination, not less than eight different forms combined in one large figure.
4. One mosaic, not less than thirty-six forms. Quarters of full size paper for Nos. 3 and 4. Practical work for occupation books.

Cutting.

1. Right isosceles ground form, not less than thirty-eight figures in logical sequence.
- 2 Equilateral triangle, ground form, not less than twenty-six figures in logical sequence.
3. Right isosceles, ground form (a school of curves), not less than twelve figures. Practical work for occupation book.

Parquetry.

- I. Three miscellaneous life forms using circles.
- II. " " " " squares.
- III. A form of beauty using right isosceles triangles.
- IV. " " " equilateral triangles.
- V. A form of beauty emphasizing form through contrast in color—right isosceles triangles.
- VI. A form of beauty emphasizing color by contrast and combination—any form may be used.
- VII. A logical sequence of five figures, forms of beauty, any form may be used.

Kindergarten Pease Work.

- I. With one stick, a list of objects, not less than five.
- II. With two sticks :
 - (a) Right angle.
 - (b) Acute angle.
 - (c) Obtuse angle.
 - (d) Ten life forms.
- III. With three sticks :

Triangles.

 1. (a) Right isosceles.
 - (b) Acute "
 - (c) Obtuse "
 - (d) Scalene triangle.
 - (e) Obtuse scalene.
 - (f) Equilateral triangle.
 2. Five life forms with three sticks in each.
 3. Triangular prism, right and oblique.
 4. Tetrahedron.
 5. One form of life from a triangular prism.
 6. Two forms of beauty from the equilateral triangle

Quadrilaterals.
- IV. 1. Square. "
2. Five life forms with four sticks in each.
3. Square prism, right and oblique.
4. Pyramid from a square base.
5. Four life forms from a square prism.
6. Two forms of beauty from a square centre.
- V. 1. Oblong.
2. Rectangular parallelopiped.
3. Four life forms from rectangular parallelopiped.
- VI. 1. Rhomb.
2. Rhombic prism.
- VII. 1. Rhomboid.
2. Rhomboidal prism.
- VIII. 1. Trapezoid.
2. Trapezoidal prism.
3. One form of life from trapezoidal prism.
- IX. 1. Trapezium.
2. Prism whose bases are trapeziums.
3. One form of life from prism whose bases are trapeziums.

- X. With five sticks :
1. Pentagons.
 2. Forms with five sticks—not less than six.
 3. Pentagonal prism.
 4. One life form from pentagonal prism.
 5. One form of beauty from pentagonal centre.
- XI. With six sticks :
1. Hexagon.
 2. Forms of life with six sticks—not less than six.
 3. Hexagonal prism.
 4. Life form from hexagonal prism.
 5. Two forms of beauty from hexagonal centre.
- XII. With eight sticks :
1. Octagon.
 2. Forms of life with eight sticks—not less than six.
 3. Octagonal prism.
 4. Forms of life from octagonal prism.
 5. Two forms of beauty from octagonal centre.
- XIII. Regular octahedron.
- XIV. A solid having twenty-six faces.
- XV. Six miscellaneous forms of life.
- Six " " beauty (double).

Kindergarten Modelling.

- I. Ball (solid forms):
1. The type.
 2. Five objects, modifications of the type.
- Half solid :
1. The type.
 2. Three objects, modifications of the type.
- Plane :
1. The type.
 2. Three objects, modifications of the type.
- II. One combination of solid, half solids and plane.
- III. Oblate spheroid (solid form) :
1. The type.
 2. Three objects, modifications of the type.
- Half solid :
1. The type.
 2. Three objects, modifications of the type.
- Plane :
1. The type.
 2. Three objects, modifications of the type.
- IV. One combination of solid, half solid and plane.
- V. Prolate spheroid (solid form) :
1. The type.
 2. Three objects, modifications of the type.
- Half solid :] .
1. The type.
 2. Three objects, modifications of the type.

Plane :

1. The type.
2. Three objects, modifications of the type.

VI. One combination of solid, half solid and plane.

VII. Ovoid (solid form) :

1. The type.
2. Three objects, modifications of the type.

Half solid :

1. The type.
2. Three objects, modifications of the type.

Plane :

1. The type.
2. Three objects, modifications of the type.

VIII. One combination of solid, half solid and plane.

IX. Cone (solid form) :

1. The type.
- Three objects, modifications of the type.

Frustrum :

1. The type.
2. Three objects, modifications of the type.

Conoid :

1. The type.
2. Three objects, modifications of the type.

X. Cube (solid form) :

1. The type.
2. Three objects, modifications of the type.

Half solid :

1. The type.
2. Three objects, modifications of the type.

Plane :

1. The type.
2. Three objects, modifications of the type.

XI. One combination of solid, half solid and plane.

XII. Cylinder (solid form) :

1. The type.
2. Three objects, modifications of the type.

XIII. Six miscellaneous inventions made large.

One large ornamental vase.

One fruit basket and fruit.

Two animals.

Songs, Games and Stories.

Assistants should be qualified to explain the general objects of the songs and games, the significance of gesture used in connection with them, and to show by what principles they should be guided in the selection of songs, games and stories.

Natural Science.

Assistants should possess a knowledge of elementary science, particularly of animals, plants, earth, air, water, etc., and should be able to illustrate the interesting portions of these subjects in stories and conversations with the children.

Books that may be consulted :

Mutter and Kose-Lieder—Fröbel.

Education of Man—Fröbel.

Pedagogics of the Kindergarten—Fröbel.

Education by Work—Baroness Von Bulow.

Guide to Gifts—Mad. Kraus Boelte.

Guide to Occupations—Mad. Kraus Boelte.

Educational Reformers—Quick (last edition).

Anthropology—Tyler.

Child's Book of Nature—Hooker.

Reminiscences of Fröbel—Baroness Von Bulow

Fairy Land of Science—Buckley.

Perez' First Three Years of Childhood.

Symbolic Education—Miss Blow.

Life and Her Children—Buckley.

Winners in Life's Race—Buckley.

In the Child's World—E. Poulsson.

Magic Glasses—Buckley.

Botany—Spotton.

Sundays at Yoho—Campbell.

Fröbel's Mother Communings—S. E. Blow.

Fröbel's Mother Songs and Games—S. E. Blow.

Fröbel's Poems and Pictures for the Songs and Games—S. E. Blow.

EDUCATION DEPARTMENT,
Toronto, July, 1895.

DEPARTMENTAL REGULATIONS.

HIGH SCHOOLS AND COLLEGIATE INSTITUTES.

COURSES OF STUDY AND EXAMINATIONS.

ORGANIZATION.

Staff and Pupils.

1.—(1) In every High School or Collegiate Institute the head teacher shall be called the Principal, and the other teachers, Assistants.

(2) It shall be the duty of the Principal to determine the number of pupils in each form, the division of subjects among his assistants, and the order in which the subjects in each Form shall be taken up by the pupils, and to make such promotions from one Form to another as he may deem expedient.

(3) The regulations respecting the duties of teachers and pupils, and the hours for study in High Schools shall be the same as those prescribed for Public Schools, except as herein otherwise provided.

(4) Except when the Public and the High School occupy the same building, the Principal of the High School shall not be Principal of the Public School.

Subjects of Study.

2.—(1) The High School subjects of study shall be taken up in four Forms, with such subdivisions thereof as the Principal may consider necessary.

(2) The subjects of study in each Form shall be as follows :—

Form I. *Obligatory*: Reading, English Grammar and Rhetoric, English Composition, English Poetical Literature, History of Great Britain and Canada, Geography, Arithmetic and Mensuration, Algebra, Object and Model Drawing, Writing.

Optional: Latin, Greek, French, German, Botany, Book-keeping and Commercial Transactions, Stenography, Perspective Drawing.

Form II. *Obligatory*: Reading, English Grammar and Rhetoric, English Composition, English Poetical Literature, History of Great Britain and Canada, Arithmetic and Mensuration, Algebra, Geometry.

Optional: Latin, Greek, French, German, Physics, Writing, Book-keeping and Commercial Transactions, Stenography.

Form III. English Composition, English Poetical Literature, Ancient History, Algebra, Geometry, Latin, Greek, French, German, Chemistry, Physics, Botany.

Form IV. English Composition, English Poetical Literature, English and Ancient History, Algebra, Geometry, Trigonometry, Latin, Greek, French, German, Physics, Chemistry, Biology.

3.—(1) A pupil who is a candidate for a Departmental or other examination shall take up the obligatory subjects in Forms I. and II. and such of the optional subjects in these Forms and such of the subjects in Forms III and IV. as may be prescribed for his examination.

(2) A pupil who is not a candidate for a Departmental or other examination shall take up the obligatory subjects in Forms I. and II. and such other subjects in any of the Forms as may be selected by his parents or guardian and the Principal of the High School.

(3) No subject shall be taken up in any Form, other than the obligatory or optional subjects prescribed for the Form; but, until July, 1897, the Principal may make such an arrangement of classes as the circumstances of his school may render necessary.

(4) At the option of the Board of Trustees and the Principal of the High School, the Art School Drawing Course may be taken up in Forms II. and III., and Agricultural Chemistry, Physiology and Temperance, and Vocal Music may be taken up in any Form.

4.—(1) During the First Term (last Monday of August till December 22nd), Writing shall be taught at least three times a week in the lowest division of Form I., each lesson being not less than half an hour in length. The course in Book-keeping should be begun in this division in January of each year, practice in Writing being continued in connection with the work in Book-keeping.

(2) During all the school terms, Reading shall be taught at least twice a week in each of the subdivisions of Forms I. and II., each lesson being not less than half an hour in length; and the subject shall be taken up systematically in connection with English Literature in all the Forms.

(3) When the average number in a class in Reading or Writing exceeds twenty-five, proportionately more time than half an hour shall be given, and every pupil in the subdivisions concerned shall be required to take the course prescribed. The time required

for Reading and Writing shall, in each case, be apportioned separately from the other subjects on the time-table of the school and devoted to the teaching of them alone.

(4) Drill, Gymnastics, and Calisthenics shall be taught, during the regular school hours and in well organized classes, not less than an hour and a half a week in each division of Forms I., II. and III.; and additional provision should be made for practice by the pupils under efficient supervision. Drill, Calisthenics and Gymnastics is optional in Form IV. In High Schools that have no gymnasium, Gymnastics is not obligatory, and Drill and Calisthenics shall be taken up only in suitable weather and in accordance with the circumstances of each school. No pupil shall be exempted from the prescribed course in Drill, Gymnastics, and Calisthenics, except upon a medical doctor's certificate, or on account of evident physical defects. The principal may omit the physical exercises on sultry days in June and September. Half-hour periods are recommended for Drill, Gymnastics, and Calisthenics.

(5) In the case of a High School with a Gymnasium, no grant will be made on this part of the equipment unless the full time is allowed for Drill, Gymnastics, and Calisthenics, and unless the work done is of a satisfactory character, as certified by the visiting High School Inspector.

(6) Pupils who intend to proceed to the examinations of the Third or the Fourth Form, either directly or after obtaining a Primary Certificate, and who have selected a course containing three languages, should begin Latin on entering Form I., and Greek or French or both after about one year's study of Latin. Other pupils who intend to proceed to the examinations of the Third or the Fourth Form, either directly or after obtaining a Primary Certificate, should begin Latin on entering Form I., and the other language required in their course as soon as the organization of the school will permit.

(8) The average number in a class in the Laboratory work in Physics or Chemistry should not exceed twenty-five.

High School Courses of Study.

5. The following are the details of the courses of study in each Form :

FORM I.

Reading.—Practice in Oral Reading ; Spelling.

English Grammar and Rhetoric.—Etymology and Syntax, including the inflection, classification, and elementary analysis of words and the logical structure of the sentence ; rhetorical structure of the sentence and paragraph ; exercises, chiefly on passages from authors not prescribed.

English Composition.—Essays on familiar subjects ; familiar letters.

English Poetical Literature.—Intelligent and appreciative comprehension of the prescribed texts ; memorization of the finest passages ; Supplementary Reading from authors provided in the High School library or supplied by pupils under the authority of the High School Board ; oral reading of the texts.

History.—The History of Canada ; British History begun.

Geography.—The building up of the earth ; its land surface ; the ocean ; comparison of continents as to physical features, natural products and inhabitants ; relations of physical conditions to animal and vegetable products, and of natural products and geographical condition to the occupations of the people and national progress.

Form, size and motions of the earth ; lines drawn on the map, with reasons for their position ; relation of the positions of the earth with respect to the sun, to light and temperature ; the air ; its movements ; causes affecting climate.

Natural and manufactured products of the countries of the world, with their exports and imports ; transcontinental commercial highways and their relation to centres of

population ; internal commercial highways of Canada and the chief internal commercial highways of the United States ; commercial relations of Great Britain and her colonies.

Forms of governments in the countries of the world and their relation to civilization.

Arithmetic and Mensuration.—Proofs of elementary rules in Arithmetic ; Fractions (theory and proofs) ; Commercial Arithmetic ; Mental Arithmetic ; Mensuration of rectilinear figures.

Algebra.—Elementary rules ; Highest Common Measure ; Lowest Common Multiple ; Fractions begun.

Drawing.—Object and Model Drawing ; Perspective.

Writing and Book-keeping.—Writing ; Book-keeping by single and double entry ; commercial forms ; general business transactions.

Stenography.—The elements of Pitman's system.

Latin.—The elementary Latin Book, grammar, composition, and sight-reading.

Greek.—The Beginners' Greek Book begun.

French.—The Elementary French Book, grammar, composition, conversation, dictation, and sight-reading.

Botany.—The practical study of representatives of the following natural orders of flowering plants :

Ranunculaceæ, Cruciferae, Malvaceæ, Leguminosæ, Rosaceæ, Sapindaceæ, Umbelliferae, Compositæ, Labiatae, Cupuliferae, Araceæ, Liliaceæ, Iridaceæ, Coniferae, and Gramineæ (types contained in text-book).

Drawing and description of plants and their classification.

Comparison of different organs, morphology of root, stem, leaves and hairs, parts of the flowers, germination, reproduction of flowering plants, pollination, fertilization, and the nature of fruits and seeds.

FORM II.

Reading.—The course in Form I. continued.

English Grammar and Rhetoric.—The course in Form I. continued, with the main facts in the development of the language.

English Composition.—The course in Form I. continued.

English Poetical Literature.—The course in Form I. continued, with the prescribed texts.

History.—Great Britain and Canada from 1763 to 1871, with the outlines of the preceding periods of British History. The Geography relating to the History prescribed.

Arithmetic and Mensuration.—Course in Arithmetic in Form I. reviewed and completed. Mensuration : right parallelopipeds, pyramids, and prisms ; the circle, sphere, cylinder, and cone.

Algebra.—The course in Form I. reviewed and completed, with simple equations of one, two, and three unknown quantities ; simple problems.

Geometry.—Euclid ; Book I. ; deductions.

Latin.—The course in Form I. continued, with the prescribed author.

Greek.—The Beginner's Greek Book, to p. 301 ; sight translation.

French.—The course in Form I. continued, with the Reader.

German.—The High School German Grammar ; grammar ; composition ; conversation ; dictation ; the Reader ; sight-reading.

Physics.—An experimental course defined as follows :

Metric system of weights and measures. Use of the balance. Phenomena of gravitation. Matter attracts matter. Laws of attraction. Cavendish experiment. Attraction independent of condition. Illustration of weight of gases, liquids and solids. Specific gravity.

Meaning of the term "a form of matter." All matter may be subject to transmutation ; "Chemistry," application of measurement by weight (mass) to such transmutation leads to the theory of elements. Matter indestructible.

Meaning of "Force." Various manifestations of force, with illustrations from the phenomena of electricity, magnetism and heat. Force measured in gravitation units ; consequent double meaning of the terms expressing units of weight as mass, and units of weight as force.

Meaning of "Work." Measurement of work in gravitation units. Meaning of "Energy."

Effects of force continuously applied to matter. Laws of matter in motion. Velocity. Acceleration. Statement of Newton's Laws of Motion. Definition of "Mass." Meaning, value, and application of "g." Mass a measure of matter.

Conservation of Energy. Energy, like matter, indestructible and transmutable.

Study of the states of matter. Properties and laws of gases, liquids and solids. Laws of diffusion.

Elementary laws of heat. Mechanical equivalent. Latent heat. Specific heat. Calorie.

Writing and Bookkeeping.—Writing ; bookkeeping by single and double entry ; business forms, usages, and correspondence.

Stenography.—Course in Form I. continued.

FORM III.

English Composition.—Essay-writing.

English Poetical Literature.—Course in Form II. continued, with the prescribed texts.

History.—Outlines of Roman History to the death of Augustus, and of Greek History to the battle of Chaeronea. The geography relating to the history prescribed.

Algebra.—Course in Form II. reviewed ; Square root ; Indices ; Surds ; quadratics of one and two unknown quantities.

Geometry.—Euclid : Books I., II., and III. Deductions.

Latin.—Course in Form II. continued ; with the prescribed texts.

Greek.— " " " " " "

French.— " " " " " "

German.— " " " " " "

Chemistry.—An experimental course defined as follows :

Properties of Hydrogen, Chlorine, Oxygen, Sulphur, Nitrogen, Carbon, and their more important compounds.

Nomenclature.—Laws of combination of the elements. The Atomic Theory and Molecular Theory.

Physics.—ELECTRICITY.—Voltaic cells, common kinds ; chemical action in the cell ; magnetic effects of the current ; chemical effects of the current ; voltameter ; astatic and tangent galvanometers ; simple notions of potential ; Ohm's law, with units ; best arrangement of cells ; electric light, arc and incandescent ; magnetism ; inclination and declination of compass ; current induction ; induction coil ; dynamo and motor ; electric bell ; telegraph ; telephone ; electroplating.

SOUND.—Caused by vibrations ; illustration of vibrations, pendulums, rods, strings, membranes, plates, columns of air ; propagated by waves ; its velocity ; determination of velocity, pitch ; standard forks, acoustical, $C = 512$, musical, $A = 870$; intervals ; harmonic scale ; diatonic scale ; equally tempered scale ; vibration of air in open and closed tubes, with wave-lengths ; resonators ; nodes and loops ; vibration of strings and wires ; reflection of sound ; manometric flames.

LIGHT.—Rectilinear propagation ; image through a pin-hole ; beam, pencil ; photography ; shadow and grease-spot photometers ; reflection and scattering of light ; laws of reflexion ; images in plain mirrors ; multiple images in inclined mirrors ; concave and convex mirrors ; drawing images ; refraction ; laws and index of refraction ; total reflexion ; path through a prism ; lenses ; drawing image produced by a lens ; simple microscope ; dispersion and color ; spectrum ; recombination of white light.

Botany.—The practical study of representatives of the flowering plants of the locality and representatives of the chief subdivisions of cryptogams, such as a fern, a lycopod, a horsetail, a liverwort, a moss, a lichen, a mushroom and a chara.

The drawing and description of parts of plants and classification.

Comparison of different organs, morphology of root, stem, leaves and hair, parts of the flower, reproduction of flowering plants, pollination, fertilization, and the nature of fruit and seeds.

FORM IV.

English Composition.—Courses in Form III. continued.

English Poetical Literature.—Course in Form III. continued, with the prescribed texts.

History.—English History from the discovery of America to 1763. Ancient History : the course in Form III. reviewed. The Geography relating to the History prescribed.

Algebra.—Course in Form III. reviewed. Theory of Divisors ; Ratio, Proportion, and Variation ; Progressions ; Notation ; Permutations and Combinations ; Binomial Theorem ; Interest Forms ; Annuities.

Geometry.—Euclid : The course in Forms II. and III. reviewed ; Books, 4 and 6 ; Definitions of Book 5 ; Deductions.

Trigonometry.—Trigonometrical ratios, with their relations to each other ; Sines, etc., of the sum and difference of angles with deduced formulas ; Use of Logarithms ; Solution of Triangles ; Expressions for the area of triangles ; Radii of circumscribed, inscribed, and escribed circles.

Latin.—Course in Form III. continued, with the prescribed texts.

Greek.— “ “ “ “ “ “

French.— “ “ “ “ “ “

German.— “ “ “ “ “ “

Physics.—An experimental course defined as follows :

MECHANICS.—Uniformly accelerated rectilinear motion, particularly under gravity ; composition and resolution of forces ; triangle and parallelogram of forces ; friction ; polygon of forces ; with easy examples.

HYDROSTATICS.—Fluid pressure at a point ; pressure on a horizontal plane ; pressure on an inclined plane ; resultant vertical pressure, and resultant horizontal pressure, when fluid is under air pressure and when not ; transmission of pressure ; Bramah's press ; equilibrium of liquids of unequal density in a bent tube ; the barometer ; air-pump ; water-pump, common and force ; siphon.

ELECTRICITY.—Voltaic cells, common kinds ; chemical action in the cell ; magnetic effects of the current ; chemical effects of the current ; voltametre : astatic and tangent

galvanometers ; simple notions of potential ; Ohm's law, with units ; best arrangement of cells ; electric light, arc and incandescent ; magnetism ; inclination and declination of compass ; current induction ; induction coil ; dynamo and motor ; electric bell ; telegraph ; telephone ; electroplating.

SOUND.—Caused by vibrations ; illustration of vibrations, pendulums, rods, strings, membranes, plates, columns of air ; propagated by waves ; its velocity ; determination of velocity ; pitch ; standard forks, acoustical, $C = 512$, musical $A = 870$; intervals ; harmonic scale ; diatonic scale ; equally tempered scale ; vibration of air in open and closed tubes, with wave-lengths, resonators ; nodes and loops ; vibration of strings and wires ; reflection of sound ; manometric flames.

LIGHT.—Rectilinear propagation ; image through a pin-hole ; beam, pencil ; photography ; shadow and grease-spot photometers ; reflection and scattering of light ; laws of reflection ; images in plain mirrors ; multiple images in inclined mirrors ; concave and convex mirrors ; drawing images ; refraction ; laws and index of refraction ; total reflection ; path through a prism ; lenses ; drawing image produced by a lens ; simple microscope ; dispersion and color ; spectrum ; recomposition of white light.

Chemistry.—Chemical theory.

The practical study of the following elements, with their most characteristic compounds, in illustration of Mendelejeff's classification of the Elements :

Hydrogen ; Sodium ; Potassium ; Magnesium, Zinc ; Calcium, Strontium, Barium ; Boron, Aluminium ; Carbon, Silicon, Tin, lead, Nitrogen, Phosphorus, Arsenic, Antimony, Bismuth ; Oxygen ; Sulphur, Fluorine, Chlorine, Bromine, Iodine ; Manganese, Iron.

Elementary Qualitative Analysis.

Biology.—**ELEMENTS OF ZOOLOGY.**—Thorough examination of the external form, the gills, and the viscera of some common fish. Study of the prepared skeleton of the same. Demonstration of the arrangement of the muscular and nervous systems and the sense organs, as far as these can be studied without the aid of the microscope.

Comparison of the structure of the frog with that of the fish. The skeleton of the pectoral and pelvic girdles, and of the appendages of the frog, and the observation of the chief facts in the development of its spawn, till the adult form is attained.

Examination of the external form of a turtle and a snake.

Examination of the structure of a pigeon or a fowl.

Study of the skeleton, and also of the teeth and viscera of a cat or dog.

Study of a crayfish as a type of the Arthropods.

Comparison of the crayfish with an insect (grasshopper, cricket or cockroach) ; also with a millipede and a spider.

Examination of an earthworm and a leech.

Study of a fresh-water mussel and a pond snail.

The principles of zoological nomenclature as illustrated by some of the common fresh-water fish, such as the sucker and herring, bass and perch.

Study of an amoeba or paramoecium as a type of unicellular animal.

The modifications of the form of the body in vertebrates in connection with different methods of locomotion.

ELEMENTS OF BOTANY.—The practical study of representatives of the flowering plants of the locality in which the preparatory school is situated, and the representatives of the chief subdivisions of cryptogams, such as a fern, a lycopod, a horsetail, a liverwort, a moss, a lichen, a mushroom and a chara.

An elementary knowledge of the microscopic structure of the Bean and the Maize.

The drawing and description of parts of plants and classification.

Comparison of different organs, morphology of root, stem, leaves and hair, parts of the flower, reproduction of flowering plants, pollination, fertilization, and the nature of fruit and seeds.

NOTE.—The Roman method of pronouncing Latin is recommended:—*a* as in *far*, *ā* the same sound but shorter; *ē* like *a* in *fate*, *ĕ* as in *set*; *ī* as in *machine*, *î* as in *fit*; *ō* as in *note*, *ŏ* as in *obey*; *ū* as in *rude*, *û* as in *full*; *j* (*i* e., *i* consonant) like *y* in *year*; *c* and *g* always hard as in *can*, *go*; *t* always as *t*, never as *sh*; *v* = *w*, *s* = *s* in *this*, never *z* as in *his*; *ai* = *ai* as in *aisle*; *ae* as *ai* in *aisle*, or *ay* as in *bay*; *ou* as *ou* in *our*; *ei* as in *feint*; *eu* = *eh*—*oo*; *oe* as *oi* *oil*; *ui* almost as *we*.

FORM EXAMINATIONS.

Subjects.

6. Examinations will be held annually by the Education Department on the subjects of the High School courses of study, in accordance with the following scheme:

FIRST FORM Examination—*Subjects*: Drawing, Writing, Bookkeeping and Commercial Transactions, Geography, Botany, Reading.

SECOND FORM Examinations—(1) *Subjects*: Part I.—English Grammar and Rhetoric, Arithmetic and Mensuration, the History of Great Britain and Canada, Physics; Part II.—English Composition, English Literature, Algebra, Geometry. (2) *Optional Subjects*: Latin, Greek, French, German.

THIRD FORM Examinations.—*Subjects*: English Composition, English Poetical Literature, Ancient History, Algebra, Geometry, Latin, French or German, with (a) Greek, or (b) the second Modern Language and Chemistry, or (c) Physics, Botany and Chemistry.

FOURTH FORM EXAMINATIONS.—*Subjects*: Part I.—English Composition, English Poetical Literature, English and Ancient History, Algebra, Geometry, Trigonometry; Part II.—Latin, French or German, Physics, with (a) Greek, or (b) the Second Modern Language, or (c) Chemistry and Biology.

COMMERCIAL EXAMINATION. — *Subjects*: Those prescribed for Parts I. and II. of the Second Form Examinations (number of papers and values being the same), with, in addition, Writing, Book-keeping and Commercial Transactions, and Stenography of Form II.

Number and Values of Papers.

7. The number and the values of the papers in each subject shall be as follows:

FIRST FORM EXAMINATION.

SUBJECTS.	NO. OF PAPERS.	VALUES.
Drawing.....	One.....	100
Writing, Bookkeeping, and Commercial Transactions }	 “	100
Geography.....	 “	100
Botany.....	 “	100
Reading.....	No paper; oral examination.....	50

SECOND FORM EXAMINATIONS.

Part I.

English Grammar and Rhetoric.....	One.....	200
Arithmetic and Mensuration.....	“	200
History of Great Britain and Canada.....	“	150
Physics	“	100

Part II.

English Composition.....	One.....	100
English Literature.....	".....	150
Algebra.....	".....	150
Geometry.....	".....	100

Optional

Latin.....	One.....	150
Greek.....	".....	150
French.....	".....	150
German.....	".....	150

THIRD FORM EXAMINATIONS.

ADDITIONAL PAPERS FOR COMMERCIAL DIPLOMA.

Writing and Bookkeeping.....	One.....	200
Commercial Transactions.....	".....	200
Stenography.....	".....	100
" Dictation.....	".....	100

One paper in Authors and Grammar, and one in Composition.

Special Requirements.

8.—(1) At all the examinations, one mark shall be deducted for each mis-spelt word or for each instance of bad English, once in the case of each error.

ARITHMETIC.

(2) At the examination in Arithmetic, either Arithmetical or Algebraic solutions shall be accepted.

SCIENCE.

(3)—(a) At the First and Third Form examinations in Botany, and the Fourth Form examination in Botany and Zoology, specimens for description and identification shall be submitted to the candidates.

(b) At the Fourth Form examination in Chemistry, a practical examination shall be held in elementary Qualitative Analysis.

ENGLISH COMPOSITION.

(4)—(a) At the examination in English Composition of the Second and Third Forms an essay shall be required, to which special importance shall be attached, on one of several themes set by the examiners. In order to pass in this subject, legible writing, correct spelling and punctuation, and proper construction of sentences are indispensable. The candidate should also give attention to the structure of the whole essay, the effective ordering of the thought, and the accurate employment of a good English vocabulary. About three pages of foolscap is suggested as the proper length for the essay ; but quality, not quantity, shall be mainly regarded.

(b) In the case of the Fourth Form examination in English Composition, no limit of length is set, but special importance shall be attached to this part of the examination.

ENGLISH LITERATURE.

(5)—(a) At the examination in English Literature in the Second and Third Forms, such questions only shall be set as may serve to test the candidate's familiarity with, and intelligent and appreciative comprehension of the prescribed texts. The candidate shall be expected to have memorized some of the finest passages, and to have read carefully both prose and poetry outside of the specified work. In addition to questions on the prescribed selections, others shall be set on a "sight passage" to test the candidate's ability to interpret literature for himself.

(b) At the Fourth Form examination in English Literature, questions may also be set to determine within reasonable limits the candidate's power of appreciating literary art.

CLASSICS.

(6)—(a) At the Optional Second Form Examination in Latin or Greek, the questions in Grammar shall be mainly based on prose passages ; the sentences for translation into Latin or Greek shall be the same in idiom and vocabulary as those in the books prescribed for Forms I. and II. ; and the sentences for translation into English shall consist of "sight work," also of the same character as the sentences in the books prescribed.

(b) The examination in Latin and Greek in Form III. shall consist of—

Translation into English of passages from prescribed texts.

Translation at sight (with the aid of vocabularies) of easy Attic prose and of passages from some easy Latin prose author, to which special importance shall be attached. Candidates shall be expected to have supplemented the reading of the prescribed texts by additional practice in the translation of Greek and Latin.

Grammatical questions on the passages from prescribed texts shall be set, and such other questions as arise naturally from the contest.

Translation from English into Greek and Latin of sentences, and of easy narrative passages based upon the prescribed prose texts.

(c) The examination in Latin and Greek in Form IV. shall be of a more advanced character, including the translation into Latin and Greek of ordinary narrative passages of English.

FRENCH AND GERMAN.

(7)—(a) At the Optional Second Form Examination in French or German, the questions in Grammar shall be mainly based on prose passages; the sentences for translation into French or German shall be the same in idiom and vocabulary as those in the books prescribed for Forms I. and II.; and the sentences for translation into English shall consist of "sight work," also of the same character as the sentences in the books prescribed.

(b) At the examination in French and German in Form III.—

The candidate's knowledge of Grammar shall be tested mainly by questions based upon prose extracts.

The paper in Composition shall consist of translation into French or German of short English sentences as a test of the candidate's knowledge of grammatical forms and structure, the formation in French or German of sentences of similar character, and translation of passages from English into French or German.

Translation at sight is prescribed, to which special importance shall be attached; Candidates shall be expected to have supplemented the reading of the prescribed texts by additional practice in the translation of French and German.

(c) The prescription of work in Grammar, Composition, and Sight Translation in French and German shall be the same for Form IV. as for Form III., but the examination shall be of a more advanced character.

DRAWING AND BOOKKEEPING.

(8)—(a) The paper in Drawing for the First Form shall test the candidate's knowledge of the principles of Model and Object Drawing as contained in the authorized Drawing Books, and his skill in drawing from memory and observation any common object or group of objects. Model and Object Drawing include the type solids, their parts and their application in the drawing of objects, shading and grouping.

(b) The paper in Bookkeeping for the First Form shall consist of a set of business transactions involving the use of commercial paper, such as drafts, notes, cheques, etc. The candidate shall make a proper record of these transactions by either Single or Double Entry, and close the set of books. He shall also write out any of the commercial forms in full showing the endorsements.

STENOGRAPHY AND BOOKKEEPING FOR THE COMMERCIAL DIPLOMA.

(9)—(a) For a Commercial Diploma, the candidate shall have completed the following school work in Bookkeeping :—

Six sets, each from twenty to twenty-five foolscap pages in length, or the equivalent thereof :

Set I. shall show transactions extending over a period of two months; the transactions of the first month being done by Single Entry, and of the second by Double Entry, and showing the change from Single to Double Entry. Books to be used: Day Book (1st month), Journal Day Book (2nd month), Cash Book, Bill Book, and Ledger.

Set II. The transactions shall be the same as for Set I.; those of the first month being done by Double Entry, and of the second month by Single Entry, and showing the change from Double Entry to Single Entry. Books to be used: Four Column Journal with special columns for Mdse. Purchases and Sales (1st month), Day Book (2nd month), Cash Book, Bill Book, and Ledger.

Set III. A Double Entry set with two partners. Books to be used: Journal, Day Book with a special column for Mdse. Sales, Cash Book, Invoice Book, Bill Book, and Ledger, the first three as books of original entry.

Set IV. A Double Entry set; a continuation of Set III., the posting being done in the same Ledger. A third partner shall be admitted, and the transactions shall include shipments and consignments. Books to be used: Journal, Day Book, Cash Book, Invoice Book, Sales Book, Bill Book, and Ledger, the first four as books of original entry.

Set V. A Double Entry set; a continuation of Set IV., the posting being done in a new Ledger. A fourth partner shall be admitted, and the transactions shall include wholesale merchandising, shipment companies, and merchandise companies. Books to be used: The same as for set IV.

Set VI. A set in manufacturing. Books to be used: Journal, Day Book, with a special column for Mdse. Sales, Cash Book, Bill Book, Time Book, and Ledger.

The Cash Book shall be a book of original entry in all of the Double Entry sets, various special columns being used in the different sets. A monthly Trial Balance shall be made in connection with Sets III., IV., and V., and Statements of Resources and Liabilities, and of Losses and Gains for all of the sets.

The transactions in the different sets shall be different or the prices shall be changed from year to year.

(b) Business forms, usages, and correspondence for the Commercial Diploma shall include the following:

Negotiable paper; promissory notes; special notes; bills of exchange; acceptance; negotiation of bills, notes, etc.; cheques; collection of accounts, etc.; discharge and dishonor; special forms of due bills, etc.; accounts, invoices, etc.; interest; partnerships; receipts and releases; banking and commercial correspondence.

(c) The bookkeeping sets of pupils who write at the examinations for a Commercial Diploma shall be sent, prepaid, to the Education Department, with the examination papers.

(d) At the examination in dictation in stenography, the candidate shall be required to have attained the rate of fifty words per minute. He shall also be required to transcribe his work into longhand at the rate of fifteen words per minute. The dictated matter shall consist of business letters and legal documents.

Examination Requirements.

9.—(1) Candidates for Junior Matriculation shall take Part I. of the Second Form examinations (omitting Physics in the case of those who take the Greek option), and one of the Third Form examinations containing three languages.

(2) The Junior Matriculation examination may be taken at once or it may be divided into two parts, of which Part I. (the examination in Second Form subjects) shall be taken before Part II. (the Third Form examination) and in a different year.

(3) Candidates who have already passed the Matriculation examination, shall, if they again present themselves for examination at Matriculation, be subject to the same regulations as candidates who have passed Part I. only.

(4) Junior Leaving certificates will be accepted *pro tanto* at both Part I. and Part II. of the Junior Matriculation examination; but candidates who desire to compete for scholarships or relative standing will not be granted this exemption in the case of Part II. Candidates presenting *pro tanto* certificates must complete the examination at one time.

(5) Candidates for Honors and Scholarships will be examined only on the papers of the Fourth Form examinations, provided always that such candidates may receive pass standing on these papers.

10.—(1) Candidates for a Primary certificate shall take the First and Second Form examinations.

(2) Candidates for a Junior or Senior Leaving certificate shall take the First Form examination and Part I. of the Second Form examination, with the following in addition:

(a) For a Junior Leaving certificate, one of the Third Form examinations.

(b) For a Senior Leaving certificate, both parts of one of the Fourth Form examinations.

(3) A candidate for a Junior or a Senior Leaving certificate who has passed the First Form examination and Part I. of the Second Form examination, but who fails at the Third or the Fourth Form examinations, shall be awarded a Primary Certificate if he has passed at the Third or the Fourth Form examinations in the subjects of Part II. of the Second Form examination.

(4) Candidates for a Commercial Diploma shall take the First Form and the Commercial Examination.

(5) Candidates for a Primary Certificate at the Second Form examinations, and candidates for a Commercial Diploma, shall write on Parts I. and II. of the Second Form examinations in the same year; but the other examinations or parts of examinations, required for any grade of certificate, may be taken in the same year or in different years.

(6) Candidates for a Primary Certificate at the Second Form Examinations, may take one or more of the optional papers in Latin, Greek, French, and German; and the marks so obtained shall be added as a bonus to the aggregate of their marks for Parts I. and II., provided always such candidates have obtained at least one-third of the marks for the paper, or for each paper, taken in Latin, Greek, French, and German.

Examination Standards.

11.—(1) The standard for pass at all the examinations shall be one-third of the marks assigned to each paper; but one-half of the aggregate of marks shall be required in addition, in the case of (a) the First Form examination and (b) the Second Form examination when Parts I. and II. are taken at once.

(2) The standard for honors in a department at Matriculation shall be, for second class, 50 per cent.; and, for first class, 67 per cent. of the aggregate of marks assigned to the papers in a department.

(3) The standard for honors at each of the other examinations shall be 67 per cent. of the aggregate of marks at the examination.

Provision for Candidates under former Regulations.

12.—(1) Candidates who, in 1895, hold a certificate obtained under former Regulations, or are entitled to write, for a Junior or a Senior Leaving Certificate, may, at the examinations of 1896 or 1897, write for certificates in the subjects as prescribed therefor under the regulations of 1893 and as defined in the Regulations of 1895. For candidates for a Junior Leaving Certificate under this Regulation, the Science Option shall be the Physics and Botany prescribed for Form III. under the Regulations of 1895.

(2) Candidates who have failed at the Junior Leaving Examination of 1895, or a preceding year, but have passed in English Grammar and Rhetoric, Arithmetic and Mensuration, History and Physics, shall, on application to the Education Department, be entitled to a certificate of having passed Part I. of the Second Form Examinations, and may write for a Junior or a Senior Leaving Certificate under the Regulations of 1895.

(3) Candidates who hold Commercial Certificates obtained under the Regulations of 1893 and who present themselves at the examinations of 1896 or 1897, shall be exempt from the First Form Examination.

Notice by Candidates and Examination Fees.

13.—(1) Every person who purposes to present himself at one or more of the Form examinations, shall send to the Inspector within whose inspectoral division he intends to write, not later than the 24th of May preceding, a notice stating the class of certificate for which he is a candidate, and what optional subject or subjects he may have selected.

(2) The notice required under (1) above shall be accompanied by a fee, in accordance with following schedule:—

First Form examination, \$2 Second Form examination, Part I. and II., \$5. Third Form examination, \$5. Fourth Form examination, Parts I. and II., each \$3 ; taken together, \$5. Second Form Commercial examination, \$5, when taken at one examination ; Parts I. and II. of Second Form examination, \$5 ; the Additional Subjects (taken at a separate examination) \$2. For candidates for examination in one or two subjects only, for the purpose of completing a course for pass Matriculation into any University or Learned Profession, the fee shall be \$2.

(3) Where a High School is situated in a city or town constituting a separate inspectional division, the Inspector of such city or town shall receive applications from intending candidates, and report to the Department ; but in all other cases the County Inspector shall receive the necessary applications.

Appeals.

14.—Candidates may claim to have their papers re-read upon the following conditions :—

(1) The appeal or claim must be in the hands of the Minister of Education on or before the 15th day of September ; and the ground of the appeal must be specifically stated. No appeal shall subsequently be entertained on any ground whatever.

(2) A deposit of two dollars must be made with the Department, which deposit will be returned to the candidate if his appeal or claim is sustained.

NOTE.—*The numbers of the regulations in this circular apply to this circular only. When incorporated with the other regulations, those herein contained will be numbered therewith.*

LITERATURE SELECTIONS.

Forms I. and II.

English Literature.—The following selections from the High School Reader :—

SPECIALISTS CERTIFICATES.

NON-PROFESSIONAL QUALIFICATIONS.

1.—(1) The non-professional qualification for a Specialist Certificate in the departments of English and History, Moderns and History, Classics, Mathematics, and Science, shall be (a) an honor degree obtained in the courses specified under the foregoing titles in the calendars of the Universities of Ontario, as accepted by the Education Department; or (b), in the case of a graduate who has not graduated in one of the above courses, a certificate from the Registrar of the University that he has passed the examinations which are prescribed for each year of the honor course selected, and which he has not already passed during his undergraduate course.

(2) The qualifications for a Commercial Specialist shall be (a) a High School Assistant's Certificate; (b) Art School Certificates in Primary and Advanced Geometry and Perspective; and in Model, Memory and Blackboard Drawing; (c) a certificate of having passed an examination held by the Education Department in the following course,* the standard set at this examination being one-third of the marks for each paper, and two-thirds of the aggregate of marks:

Book-keeping and Penmanship.—Single and double entry book-keeping; wholesale and retail merchandising, commission business, manufacturing; warehousing, steamboating, exchange, joint stock companies, municipalities, societies and public institutions; statements and balance sheets, partnership adjustments, liquidation and administration of estates, auditing, filing papers, the use of special columns and the various other expedients in book-keeping to save time and labor and secure accuracy of work.

Theory and practice of penmanship, Spencerian and vertical; ledger headings; marking and engrossing.

Commercial Arithmetic.—Interest, discount, annuities certain, sinking funds, formation of interest and annuity tables, application of logarithms, stocks and investments, partnership settlements, partial payments, equation of payments, and exchange.

Banking, Business Forms and Laws of Business.—Money and its substitutes; exchange; incorporation and organization of banks; business of banks, their relation to each other and to the business community; the clearing house system; legal requirements as to capital, shares, reserves, dividends, note issue; insolvency and consequent liability.

Invoices, accounts, statements, due bills, orders, receipts, warehouse receipts, deposit receipts, deposit slips, bank pass books, promissory notes, bills of exchange, bank drafts, cheques, bonds, debentures, coupons, instalment scrips, stock certificates, stock transfers, proxies, letters of credit, affidavits, balance sheets, pay sheets, time sheets, and special forms of general book-keeping books to suit special cases.

Contracts; statute of limitations; negotiable paper and endorsements; sales of personal property; accounts, invoices, statements, etc.; chattel mortgages; real estate and mortgages; interest; agency; partnership; corporations; guarantee and suretyship; receipts and releases; insurance; master and servant; landlord and tenant; bailment; shipping and transportation; host and guest; telegraphs; auctions; patents; copyrights; trade marks and industrial designs; affidavits and declarations; subjects and aliens; wills, and joint stock companies.

* Books of reference recommended by the examiners.

The Canadian Accountant. By Beatty and Johnson.

Expert Book-keeping. By C. A. Fleming, Owen Sound.

The Theory of Finance. By Geo. King. C. & E. Layton, Farringdon St., London, E.C.

Money and the Mechanism of Exchange. By W. S. Jevons. The Humboldt Publishing Co., New

York.

Banking Act of 1890. The Carswell Co., Adelaide St., Toronto, Ont.

The Laws of Business. By C. A. Fleming.

Expert Book-keeping. By C. A. Fleming.

Complete Phonographic Instructor. By Sir I. Pitman.

Stenography.—The principles of Stenography ; writing from dictation at a speed of sixty words per minute, and accurate transcription into longhand at a speed of fifteen words per minute ; the dictated matter to comprise business correspondence, legal documents, etc.

Candidates are advised to read some shorthand periodicals to acquire a good style and familiarity with standard outlines.

(3) Every person desiring to present himself at the examination for a Commercial Specialist Certificate shall notify the Education Department on or before the 24th of May in each year, such notice to be accompanied by a fee of \$5 and a statement as to the centre at which the candidate intends to present himself for the examination prescribed in (2) (c) above.

ADDITIONAL PROVISION FOR 1896 AND 1897.

2.—(1) No Specialist Certificate shall be issued after 1897 except under the regulations above prescribed.

(2) For 1896 and 1897 the non-professional qualification for a Specialist Certificate shall be (a) a Senior Leaving Certificate, and (b) a certificate from the University Registrar of having passed in one of the following departments in accordance with the curriculum of Toronto University :—

English and History.—The honor English and History of the third and fourth year of the course prescribed for specialists in Moderns and History, and the pass courses in English and History of the four years of the same course.

Mathematics.—The pass and honor courses in Mathematics and Physics of the first and second years.

Classics.—The pass and honor courses in Classics of the first and second years.

French and German.—The pass courses in French and German of the four years with the honor examination in conversation of the third year.

Science.—Either the honor course in Natural Science of the first and second years, or the honor course in Chemistry and Mineralogy of the first and second years with the Biology of the first and second years of the Natural Science course.

(3) The standard for a Specialist Certificate under this Regulation shall be one third of the marks obtainable in each paper, and sixty-seven per cent. of the total of the marks obtainable in the papers on the prescribed subjects.

3.—(1) The examination for non-professional Specialist Certificates prescribed in Reg. 2 above and for the Senior Leaving Certificate may be taken in any order the candidate selects, but the Specialist Certificate shall not be granted until the examination prescribed for the Senior Leaving Certificate has been passed.

(2) The subjects prescribed for Specialist Certificates in Reg. 2 above shall be taken at one or two examinations.

4.—(1) Every person desiring to present himself at the examination for a Specialist Certificate prescribed in Reg. 2 above shall notify the Education Department on or before the 1st of April in each year ; such notice to be accompanied by a fee of \$5, with a statement of the department in which he proposes to offer himself for examination.

(2) Candidates for such Specialist Certificates will be examined in May of each year at the University of Toronto.

UNIVERSITY REQUIREMENTS.

5. The examination of any University in the Province of Ontario will be accepted by the Education Department for the Specialists' Certificates provided for in Reg. 2 above, on the following conditions :

(1) Candidates shall take the regular University examinations ; no special or supplemental examinations will be accepted.

(2) The candidate shall submit to the Education Department, with his application, a copy of the time-table of each examination, and of the examination papers on which he wrote, both being certified by the Registrar of the University; a confidential statement from the Registrar of the University, of the marks obtained by the candidate on each paper, and of such other marks as may have been awarded him at each oral or practical examination.

(3) Should the standard set by the University be higher or lower than the Departmental standard, the Education Department shall value the papers as it may consider necessary.

6. The standing of the Second, Third and Fourth years in Arts, after a regular course in any chartered University in the British Dominions, will be accepted by the Education Department in lieu of the Primary, Junior Leaving, and Senior Leaving Examinations respectively.

Notice to Candidates.

(1) All candidates who have failed, and candidates who have taken part of the prescribed examination, may obtain their marks on application to the Education Department.

(2) Candidates should apply to the Registrar of the University whose examinations they propose to take, for its curriculum and examination papers, and for all information connected therewith. The curriculum shows in detail the subjects and texts taken up in each year; and the examination papers show the character of the work required.

(3) For the professional qualifications for Certificates as Specialists, see the Regulations of the Provincial School of Pedagogy.

NOTE.—*The number of the Regulations in this circular refer to this circular alone. When incorporated with other regulations, these will be numbered therewith.*

EDUCATION DEPARTMENT,
Toronto, July, 1895.

TRUANCY ACT.

As I expect next session of the Legislature to revise the Truancy Act, I would like very much to get the opinion of school boards and truant officers on the following:

1. Does truancy prevail to any extent in your district?
2. If so, to what cause is it owing, whether to the ignorance, indifference or poverty of parents, or to the absence of proper family control?
3. Would it be well to prescribe some punishment for children as well as parents? Are the magistrates inclined to prosecute? Do trustees take any interest in the enforcement of the law? Are the penalties sufficient? Is it known to children that their attendance at school is compulsory? Should the truant officer be required to visit the school occasionally that his authority might be better known to the children?
4. In the case of cities would it be advisable to set apart one or more schools in the city as truant schools, to be visited once or twice a week by the truant officer, and to require all truant children in the city to attend such schools for a month or more until their good behavior would warrant their return to the school of their locality?
5. Have you any suggestion to make as to the reports to be made by teachers or trustees in order to discover truancy more readily, or for the amendment of the Act as a whole?

I shall be greatly obliged by receiving from you at your earliest convenience your views in regard to the points raised, or on any other matter that, in your opinion, would assist in improving the present law. So long as the ratepayers of the province provide free education for every child of school age, the law should be sufficiently stringent to secure reasonable regularity of attendance on the part of such child at some suitable school.

EDUCATION DEPARTMENT,
TORONTO, July, 1895.

CIRCULAR TO INSPECTORS

RESPECTING THE SANITARY CONDITION OF RURAL SCHOOLS.

You will find herewith schedules which have been prepared for the purpose of eliciting information with regard to the sanitary conditions of the rural schools of the province. At another time, and perhaps in a somewhat different way, enquiry will be made into the sanitary conditions of the public and separate schools of the province in cities, towns and incorporated villages.

Report on Teachers.

As several of the answers to the enquiries made cannot be conveniently tabulated, I shall feel greatly obliged if you will summarize your observations upon the answers received in a few paragraphs supplementary to the statistical report. For instance in your report on teachers I would like to have the general result of the information obtained with respect to the health of teachers, the effect of the schoolroom upon their powers of endurance, the ailments incident to the profession, and the care taken by teachers to maintain unimpaired their physical powers. I would like to know to what extent teachers suffer from the effects of bad ventilation or the unsanitary condition of the school-room, and if in your opinion there is any disease peculiar to the teaching profession, such as myopia, or bronchitis, or phthisis or any neurotic trouble which could be mitigated by greater care on their own part or on the part of the school authorities. It is important to know whether the conditions under which the teacher pursues his profession are as favorable to the full enjoyment of health as they should be, both for his own sake and for the proper discharge of the public service which he is called upon to perform.

Report on Pupils.

In answer to the questions in regard to pupils, I should also desire your opinion on a number of points. For instance are spectacles more used by pupils now than they were ten years ago? and if so is this owing to the defective lighting of the school-rooms, or to the ability of parents to provide better for the wants of their children. Then I would like to know if children show signs of spinal curvature or rounded shoulders, or any other physical defect which you think greater vigilance could prevent. It is also important to study carefully the evil effects which overcrowding and bad ventilation have upon the pupils' powers of study, upon their temper and their desire to enjoy themselves. My reference to games and sports is to draw out the teachers with regard to the development of those manly sports without which a boy's education, even at an ordinary public school, is incomplete. No teacher should neglect the organization of clubs for cricket, football, baseball, etc. The training which a boy gets on the playground is just as useful as any part of his school course, not simply because it is healthful, but because it develops his self control, his powers of self defence and his mettle in competing for the mastery in an honorable way over his fellows.

Report on Schoolhouses

In reporting for schoolhouses I would like to know particularly as to the arrangements made for the sweeping, scrubbing and whitewashing. I feel these elementary principles of cleanliness are very much neglected in many school sections. It is hard to realize what injury may accrue to pupils and teachers from the polluted dust with which the atmosphere of many school-rooms is loaded. The seeds of such diseases as diphtheria, scarlet fever, typhoid fever, consumption, may through this medium be transferred to many a promising pupil and teacher with the most disastrous results.

Report on School Grounds.

The examination of the school grounds is most important. Are they tidy and well kept? Are they mud puddles in spring and fall, or are they well drained, and with proper walks? Are they neatly fenced and planted with trees? Are they large enough for playground purposes, or are the pupils obliged to play upon the highways etc? But what is most important is the sanitary condition of the closets. I fear there is an amount of neglect in this respect in many parts of the province that must react upon the morals as well as upon the health of many pupils. Let there be no sparing this evil if it exists. Deal with it fully and fearlessly.

Grading of Schools.

Under this heading you are expected to grade your schoolhouses and school grounds respectively into three classes, viz. : excellent, good and inferior, giving your reasons for such classification.

General Summary.

This report on the sanitary conditions of our rural schools is one of the most important which the Department has called for in many years. I look for hearty co-operation in making it full and accurate in every particular. In order that your observations may be conveniently referred to, kindly arrange them topically as herein indicated and transmit to the Department not later than December 20th of this year.

EDUCATION DEPARTMENT,
TORONTO, August, 1895.

SUBJECTS OF EXAMINATION.

FOR TEACHERS' CERTIFICATES IN THE ALGOMA, PARRY SOUND AND NIPISSING DISTRICTS,
JULY, 1896.

FORM I.

Reading.—Practice in Oral Reading ; Spelling.

English Grammar and Rhetoric.—Etymology and Syntax, including the inflection, classification, and elementary analysis of words and the logical structure of the sentence ; rhetorical structure of the sentence and paragraph ; exercises, chiefly on passages from authors not prescribed.

English Composition.—Essays on familiar subjects ; familiar letters.

English Poetical Literature.—Intelligent and appreciative comprehension of the prescribed texts ; memorization of the finest passages ; Supplementary Reading from authors provided in the High School library or supplied by pupils under the authority of the High School Board ; oral reading of the texts.

History.—The History of Canada ; British History begun.

Geography.—The building up of the earth ; its land surface ; the ocean ; comparison of continents as to physical features, natural products and inhabitants ; relations of physical conditions to animal and vegetable products, and of natural products and geographical conditions to the occupations of the people and national progress.

Form, size and motions of the earth ; lines drawn on the map, with reasons for their position ; relation of the positions of the earth with respect to the sun, to light and temperature ; the air ; its movements ; causes affecting climate.

Natural and manufactured products of the countries of the world, with their exports and imports; transcontinental commercial highways and their relation to centres of population; internal commercial highways of Canada and the chief internal commercial highways of the United States; commercial relations of Great Britain and her colonies.

Forms of governments in the countries of the world and their relation to civilization.

Arithmetic and Mensuration.—Proofs of elementary rules in Arithmetic; Fractions (theory and proofs); Commercial Arithmetic; Mental Arithmetic; Measurement of rectilinear figures.

Algebra.—Elementary rules; Highest Common Measure; Lowest Common Multiple; Fractions begun.

Drawing.—Object and Model Drawing; Perspective.

Writing and Bookkeeping.—Writing; Bookkeeping by single and double entry; commercial forms; general business transactions.

FORM II.

Reading.—The course in Form I. continued.

English Grammar and Rhetoric.—The course in Form I. continued, with the main facts in the development of the language.

English Composition.—The course in Form I. continued.

English Poetical Literature.—The course in Form I. continued, with the prescribed texts.

History.—Great Britain and Canada from 1763 to 1871, with the outlines of the preceding periods of British History. The Geography relating to the History prescribed.

Arithmetic and Mensuration.—Course in Arithmetic in Form I. reviewed and completed. Mensuration; right parallelepipeds, pyramids and prisms; the circle, sphere, cylinder and cone.

Algebra.—The course in Form I. reviewed and completed, with simple equations of one, two and three unknown quantities; simple problems.

Geometry.—Euclid; Book I.; deductions.

FIRST FORM EXAMINATIONS.—*Subjects:* Drawing, Writing, Bookkeeping and Commercial Transactions, Geography, Reading.

SECOND FORM EXAMINATIONS.—(1) *Subjects:* Part I.—English Grammar and Rhetoric, Arithmetic and Mensuration, the History of Great Britain and Canada; Part II.—English Composition, English Literature, Algebra, Geometry.

Drawing.—Bk. 1, Architecture; Bk. 2, Constructive Drawing; Bk. 3, Industrial Design; Bk. 4, Landscape Drawing, Historical Ornament, etc.

The paper in Drawing for the First Form shall test the candidate's knowledge of the principles of Model and Object Drawing as contained in the authorized Drawing Books, and his skill in drawing from memory and observation any common object or group of objects. Model and Object Drawing include the type solids, their parts and their application in the drawing of objects, shading and grouping

Drawing and Bookkeeping.—Each candidate shall submit for examination his school work in Drawing and Bookkeeping and Commercial Transactions, which latter shall consist of the following as a minimum: Four sets, each of at least ten foolscap pages or the equivalent thereof, and each comprising the necessary books of original entry with ledger and bill book. The sets shall consist of one in single entry and three in double entry, and the books of each set, if written in a blank book, shall be entered together and shall be wholly separate from the others. The single entry set shall be especially suitable for farmers and artisans or for retail merchants and general traders, and shall employ the cash book, ledger and bill book, in addition to the necessary books of original entry. One

of the double entry sets shall be suitable for retail merchants, and shall show transactions covering a period of two months of actual business, the ledger being closed at the end of each month and a statement of resources and liabilities shown. The second double entry set shall be a set in Partnership, embracing transactions in Commission and Brokerage, and the third shall be a continuation of the single entry set, showing clearly the transfer from single to double entry. Any three accounts in the single entry set shall be made in proper form and submitted to the examiners. The candidates shall also submit at least two examples of each kind of commercial forms and correspondence pertaining to the sets. A descriptive index shall accompany each of the four sets, and the transactions in each set shall be different from year to year. Any three sets will be accepted.

The paper in Bookkeeping for the First Form shall consist of a set of business transactions involving the use of commercial paper, such as drafts, notes, cheques, etc. The candidate shall make a proper record of these transactions by either Single or Double Entry, and close the set of books. He shall also write out any of the commercial forms in full, showing the endorsements.

Candidates for a District certificate shall take the First and Second Form Examinations.

LITERATURE SELECTIONS.

English Poetical Literature.—The following lessons from the High School Reader will be the subjects for examination for candidates for the District examination, but the examination in *Oral Reading* will not necessarily be confined to these selections.

III, The Trial Scene in the "Merchant of Venice;" VII, To Lucasta, On Going to the Wars; XVIII, Rule, Britannia; XXVIII, The Cotter's Saturday Night; XXIX, The Land o' the Leal; XXXV, The Isles of Greece; XXXVI, Go, Where Glory Waits Thee; XXXVII, Dear Harp of My Country; XXXVIII, Oome, ye Disconsolate; XL, The Glove and the Lions; XLVI, The Bridge of Sighs; LI, Horatius; LIV, My Kate; LV, A Dead Rose; LVI, To the Evening Wind; LXII, The Oane-Bottomed Chair; LXVII, The Hanging of the Crane; LXXIII, Ode to the North-East Wind; LXXVI, Barbara Frietchie; LXXIX, The Lord of Burleigh; LXXX, Break, Break, Break; LXXXI, "The Revenge;" CI, The Forsaken Garden; CV, The Return of the Swallows; CVI, Dawn Angels; CVII, Le Roi est Mort; CVIII, To Winter.

Special Requirements.

At all the examinations, one mark shall be deducted for each mis-spelt word or for each instance of bad English, once in the case of each error.

ARITHMETIC.

At the examination in Arithmetic, either Arithmetical or Algebraic solutions shall be accepted.

ENGLISH COMPOSITION.

At the examination in English Composition of the Second Form, an essay shall be required, to which special importance shall be attached, on one of several themes set by the examiners. In order to pass in this subject, legible writing, correct spelling and punctuation, and proper construction of sentences are indispensable. The candidate should also give attention to the structure of the whole essay, the effective ordering of thought, and the accurate employment of a good English vocabulary. About three pages of foolscap is suggested as the proper length for the essay; but quality, not quantity, shall be mainly regarded.

Number and Value of Papers.

The number and the values of the papers in each subject shall be as follows :

FIRST FORM EXAMINATION.

SUBJECTS.	NO. OF PAPERS.	VALUES.
Drawing.....	One	100
Writing, Bookkeeping and } Commercial Transactions }	 "	100
Geography.....	 "	100
Reading.....	No paper ; oral examination.....	50

DISTRICT OF ALGOMA.

Examinations for entrance to High Schools, Public School Leaving and for Teachers' Certificates will be held at Rat Portage, Port Arthur, Sault Ste. Marie, Thessalon and Manitowaning. Candidates will make application to Donald McCaig, Esq., Collingwood, Inspector of the District.

DISTRICTS OF PARRY SOUND AND NIPISSING.

Similar examinations will be held for the District of Parry Sound at Burk's Falls, Parry Sound and Orillia, and in the District of Nipissing at North Bay and Mattawa. The Entrance and Public School Leaving examinations only will be held at Sudbury. Candidates will make application to the Rev. George Grant, B.A., Orillia, Inspector of the Districts of Parry Sound and Nipissing.

As required by the regulations of the Education Department, all applications should be made to the Inspector not later than the 24th of May, and those for Teachers' Certificates must be accompanied by a fee of \$5 (five dollars) and testimonials of moral character.

Candidates for the Entrance or Public School Leaving Examination will be required to remit a fee of \$1 with their application.

EDUCATION DEPARTMENT,
TORONTO, September, 1895.

TEXT-BOOKS AUTHORIZED FOR USE IN PUBLIC SCHOOLS, HIGH SCHOOLS, AND TRAINING SCHOOLS.

1. The text-books named in Schedule "A" shall be the authorized text-books for Public Schools. The text-books in French and German are authorized only for schools where the French or German language prevails, and where the Trustees, with the approval of the Inspector, require French or German to be taught in addition to English.

2. The text-books named in Schedule "B" shall be the only authorized text-books in High Schools and Collegiate Institutes for the courses of study prescribed for Forms I., II. and III.

3. The text-books named in Schedule "C" shall be the authorized text-books for Model Schools, Normal Schools and the Provincial School of Pedagogy.

4. The text-books in Schedule "D" used in any school on the 1st July, 1895, and recommended by resolution of the trustees to be continued in use, shall be deemed as authorized in such schools until further notice.

5. For religious instruction, either the Sacred Scriptures or the Scripture Readings adopted by the Education Department, shall be used as prescribed by the Regulations of the Education Department.

EDUCATION DEPARTMENT,
TORONTO, September, 1895

LIST OF APPARATUS

REQUIRED TO PERFORM THE EXPERIMENTS IN HIGH SCHOOL PHYSICAL SCIENCE, PART I.

The pieces marked with an asterisk should form part of individual sets for students' use.

	Probable Cost.
*1 Metric Scale, one foot long, Fig. 5. The Ordinary School Rules graduated in inches and centimetres will answer.....	\$0 02
1 Metre Stick.....	0 50
*2 Rectangular Blocks, Figs. 12 and 13.....	0 10
1 Dissected Litre Block.....	2 00
*1 Test Tube on Foot, Figs. 21, 25, 59, 88.....	0 10
*1 Pinch-Cock, Figs. 21, 22, 106.....	0 15
1 Burette, Mohr's, 50 C. C. graduated in tenths.....	2 00
1 Measuring Cylinder, 100 C. C. graduated, Figs. 23, 97, 99.....	0 80
*3 Beakers, different sizes, Figs. 25, 26, 36, 56, 69, 89, 83, 106, 121, 124, 127, 136.....	0 55
1 Glass Basin, Figs. 26, 31, 55, 57, 68, 76, 90, 124.....	0 60
1 Fire Syringe, Figs. 27 and 107.....	2 00
1 Air Pump and Receiver.....	24 00
1 Elastic Rubber Balloon. A toy balloon answers well.....	0 10
1 Pendulum Bob, Figs. 29 and 66.....	0 10
1 Track for Balls, Fig. 30.....	0 75
4 Well turned Metal Balls to use with above.....	2 00
*1 Tuning Fork, Simple Form, Fig 31.....	0 20
1 Radiometer, Fig. 32.....	3 00
*3 Supports, Figs. 33 and 35. May be made of bent wire inserted into block of wood.....	0 10
* $\frac{1}{2}$ Doz. Pith Balls, Fig. 33.....	0 15
*1 Rod of Vulcanite.....	0 25
*1 Bar Magnet, Fig. 34.....	0 25
*1 Magnetic Needle on Stand, Fig. 36. Cheap form of compass will answer.....	0 25
1 Track, Car, Pulley and Scale-Pan, Fig. 37. Should be carefully constructed as described in Text-Book.....	8 00

Removable support to be screwed into Laboratory Table. One face of support should be supplied with Scale and Mirror, Figs. 38 and 50, one at each table.....		1 56
Steel Wire of different sizes for making elastic Spiral Springs		0 15
1 Physical Balance, with set of Metric Weights		8 50
*1 Adjustable Spring Balance.....		0 65
*3 Test Tubes, Figs. 45, 96, 130, 135.....		0 10
*1 Spirit Lamp or Bunsen Burner.....		0 50
*1 Pair Forceps, Fig. 46		0 20
*1 Mortar and Pestle.....		0 30
1 Small Vise, Fig. 51.....		0 40
*1 Set of Heavy Weights, Figs. 37, 38, 48, 50, 52 and 53.....		0 65
*1 Glass Disc with hook at centre, Figs. 55 and 65.....		0 20
$\frac{1}{2}$ Pound Capillary Tubing, assorted sizes		0 50
2 Tubes, Fig. 58.....	Each 25	0 50
1 Tube, Fig. 62.....		0 90
*3 Thistle Tubes, Figs. 60, 63, 72, 88, 89, 92, 94, 95	Each 15.	0 45
1 Transmission of Pressure Apparatus, Fig. 61.....		1 00
*1 Pipette, Figs. 59 and 102		0 15
*1 Tall Glass Jar, Fig. 64, 65, 92, 118.....		0 60
*1 Large Glass tube with edges ground, Figs. 65, 67 and 127.....		0 85
1 Archimedes Principle, Fig. 69		2 00
1 Globe for weighing air, Figs. 70 and 77.....		2 50
2 Small Bottles. Two four-ounce medicine vials will answer.....		0 10
*2 Small Perforated Rubber Corks, Figs. 73 85, 86, 87, 112, 125, 127. The corks should fit the bottles above and the Test Tubes and Florence Flasks used in other experiments.....		0 15
1 Pair Magdeburg Hemispheres, Fig. 74.....		5 00
1 Guinea and Feather Tube, 76		5 00
1 Barascope, Fig. 77.....		2 00
*1 Barometer Tube, heavy glass, Figs. 78 and 79.....		0 50
1 Mariotte's Law Apparatus, with extra Bulb Tube for Charles Law, Figs. 80, 119		8 00
*1 Retort Stand.....		0 50
*2 Small Florence Flasks, Figs. 85, 86, 87, 112, 125, 127.....		0 20
*1 Florence Flask with wide mouth, Figs. 92, 118, 122, 123, 124, 130, 137.....		0 25
*1 Glass Tube with Stop-Cock, Figs. 86 and 87. A piece of rubber tubing with Pinch-Cock will answer.....		0 85
*1 Hydrometer Jar, Figs. 88, 104, 105		0 45
1 Universal Support, Figs. 89, 92, 93.....		2 00
2 Rubber Corks, each with two holes, Figs. 92, 112, 118, 122, 123, 130, 137. They should fit Florence Flask with large mouth.....		0 15
*1 Porous Battery-cell, small size		0 20
*1 Perforated Rubber Cork to fit Battery-cell, Fig. 92.....		0 25
1 Specific Gravity Bottle, Fig. 100 and 101.....		1 25
*1 Weighted Wooden Prism, 1 square Centimetre in sections, Figs. 20 and 103 ..		0 25
1 Hydrometer for light and heavy liquids.....		0 75
1 Tube for Fig. 106.		0 60
4 Bunsen or Grenet Cells, Fig. 108.....	Each \$1.50	6 00
1 Ball and Ring, Fig. 109.....		1 25
1 Pyrometer, Fig. 110.....		3 00
1 Compound Bar, Fig. 111.....		1 00
1 Chemical Thermometer, graduated in both Centigrade and Fahrenheit Degrees, Figs. 116, 118, 121, 122, 123.....		2 25
1 Differential Thermometer, Figs. 117, 144, 145.....		2 50
1 Liebig Condenser, Fig. 125.....		1 00
1 Cryophorous, Fig. 126.....		1 75
1 Calorimeter, Fig. 129.....		2 75

1 Ingenhous Apparatus, Fig. 132.....	1 50
1 Apparatus to show convection in Gases, Fig. 139.....	1 00
1 Glass Candy Jar for Fig. 140.....	0 60
1 Large Iron Ball, Figs. 141, 145.....	0 75
1 Leslie Cube, Fig. 144.....	1 40

SUNDRIES.

Rubber Tubing, heavy	0 50

EDUCATION DEPARTMENT,
TORONTO, October, 1895.

COUNTY MODEL SCHOOLS.

PROFESSIONAL EXAMINATIONS.

Directions to Inspectors and Principals.

The instructions given in Circular 19 regarding the examinations should be followed subject to the following provisions :

I. The examination paper in Temperance and Hygiene will be framed to meet the requirements of students prepared from either of the authorized text-books.

II. In Music and Calisthenics no examination will be held by the County Boards of Examiners, but, as in the case of the Provincial Normal Schools, the teacher or teachers of these subjects shall, at the close of the term, give to the Chairman of the Board the marks which they have awarded to the students, and these marks shall be entered under the proper headings in the official report, and considered with the other marks by the Board in determining the results.

III. In order that a candidate may be awarded a certificate he must obtain (a) one-third of the marks in each subject at the final written examination conducted by the Board of Examiners ; (b) one-third of the marks in Music and Calisthenics ; (c) one-half of the aggregate marks awarded by the Board and by the Principal for teaching ; and (d) one-half of the aggregate marks in all subjects.

IV. The names of all candidates granted renewals should be entered on the Report of the Board of Examiners.

V. The Secretary of the Board shall state in the Official Report to the Education Department, by whom each subject was examined, and shall forward by mail the Principal's report on the standing of each student.

VI. The answer papers of candidates are to be sent to the Department by express (charges prepaid).

EDUCATION DEPARTMENT,
TORONTO, October, 1895.

EQUIPMENT RECOMMENDED FOR A GYMNASIUM.

The apparatus marked † is indispensable. Except where the number required is specially mentioned, enough of each kind of machines should be supplied to provide for the largest class under instruction. For the use and a description of the machines see MacLaren's Physical Education : MacMillan & Co.

FOR BOYS.

† Wooden Dumb Bells.

† Indian Clubs.

† Vertical ropes of manilla, three pairs—1-inch, $1\frac{1}{4}$ -inch, $1\frac{1}{2}$ -inch—the ropes to hang about 20 inches apart.

† Two horizontal Bars—one at least to be adjustable to different heights.

† Two pairs Parallel Bars—one pair to be at least 6 feet long ; height from ground, 4 feet 8 inches ; diameter of bars, 2 inches ; distance apart 17 inches. One pair to be at least 7 feet long, height from ground, 4 feet 5 inches ; diameter of bars, $1\frac{3}{4}$ inches ; distance apart, 15 inches.

† Flying Rings—two pairs.

† Two Single Trapezes.

† Rifles or Wooden Rifles.

† Horizontal Ladder.

† Travelling Rings—at least six.

Chest-weight Machines.

Rowing Machines.

Vertical and Slanting Poles.

A Rosary.

A Mast.

Leaping Poles.

A Horizontal Beam.

A Wooden Vaulting Horse.

Two Planks—plain and bridged.

The Prepared Wall.

FOR GIRLS.

† Wooden Dumb Bells.

† Wands.

† Indian Clubs.

Chest-weight Machines.

EDUCATION DEPARTMENT,
TORONTO, November, 1895.

SYLLABUS OF MUSIC FOR PUBLIC SCHOOLS.

It is desirable that singing by *note* should be introduced into all Public Schools.

Where sufficient reasons exist which render this impracticable, the Inspector may accept songs which have been taught by rote, provided the singing is well done.

Either the Staff or the Tonic-Solfa notation may be used ; Part I. of the Syllabus is prescribed for schools in which the former is adopted, and Part II. for the latter.

In graded schools where classes are divided into Junior and Senior, the former will take the subjects marked (a); and the latter those marked (b).

The Tune tests are intended to be sung from the examiner's pointing on a blank staff, or Tonic-Solfa Modulator, and without any rhythmic form. The Time tests are intended to be sung on a monotone to *laa* or any other suitable syllable.

In all Ear-Tests the tones of the Tonic chord should be sung by the examiner before giving the tests, in order that the tonality or key may be clearly established.

In all grades, at least one new song should be studied every month. It is hoped that teachers will endeavor to inculcate a love for National and Patriotic songs, and cultivate a taste for good music among the young people of Ontario.

No specific tests in Voice-Culture have been prescribed, but Inspectors should insist on all exercises and songs being sung with a pure quality of tone, without forcing or straining the voice.

PART I.

STAFF NOTATION.

First Book Classes.

Tune :

- (a) The tones of the Tonic-chord, Doh, Mi, Sol, to be sung from pointing on a blank staff in any key. The position of the key-tone must be clearly indicated by the examiner.
- (b) The above with the addition of the second and seventh degrees (Re and Si) of the Major Scale, approached by step.

Examples (a)

(b)

Time :

- (a) Simple exercises in 2 , $\frac{3}{4}$ or time, with quarter-notes, half-notes and whole notes.
- (b) The same with the addition of eighth-notes.

Examples (a)

(b)

Ear-Training :

To imitate simple phrases of three tones sung to the syllable *laa*.

Songs :

Simple songs learnt by ear.

Examples : Away Among the Blossoms.

Good Morning Merry Sunshine.

*Second Book Classes.**Tune :*

The tones of the Major Scale in any key, but with leaps to Do, Mi and Sol only.
The position of the key-tone must be clearly indicated by the examiner.

*Time :*

(a) Simple exercises in $\frac{3}{4}$ or $\frac{4}{4}$ time containing the dotted quarter note and half-note.

(b) Simple exercises containing sixteenth-notes, and rests of one beat.

*Sight-singing :*

Simple exercises in combined Tune and Time, but not necessarily containing any difficulties of rhythm greater than half-beat notes.

*Ear training :*

Tell the name of any one tone of the scale, on hearing it sung to *laa*.

Songs :

Simple songs learnt by note.

Examples : Lightly Row ; Sun of my Soul.

*Third Book Classes.**Tune :*

(a) The names of the lines and spaces in the G and F clefs.

The tones of the Major Scale in any key with easy leaps.

Theoretical knowledge of Key-signatures up to four sharps or flats.

(b) Exercises containing the sharpened fourth or flattened seventh of the scale.

Examples (a)

Time :

- (a) Combinations of eighth and sixteenth notes

Theoretical knowledge of the following Time Signatures, $\frac{2}{2}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{3}{4}$, $\frac{3}{8}$, $\frac{4}{4}$, $\frac{4}{4}$.

- (b) Triplets, and rests of the value of one half-beat.

*Sight-singing :*

- (a) Exercises in combined Tune and Time with intervals of moderate difficulty and half-beat notes.
- (b) The same with dotted quarter and half-notes.

*Ear training :*

- (a) Tell the names of *any* three tones of the diatonic scale in stepwise progression when sung to *laa*.
- (b) The same preceded or followed by one leap.

*Songs :*

Two-part songs adapted to the reading ability and general intelligence of the pupils.

*Fourth Book Classes.**Tune :*

Exercises on the Minor Scale with its leading note. Simple modulations by the use of the sharpened fourth or flattened seventh.

Examples*Time :*

Review and combination of the various rhythms prescribed for junior classes ; also compound duple time.

*Ear training :*

Tell the names of any four tones of the diatonic scale when sung to *la*.

*Songs :*

Two-part songs adapted to the reading ability and general intelligence of the pupils.

Model Schools :

The practical work for Model Schools will be the same as for Fourth Book classes with the addition of the following syllabus in Musical Theory.

Tune :

Questions on the structure of the Major and Minor scales, and Key signatures containing not more than four sharps or flats.

Time :

Questions on beats, accents, Time-signatures, the G and F clefs, and the names of the lines and spaces.

Teaching :

Knowledge of the Music Syllabus prescribed for Public Schools, with ability to write examples of exercises adapted to the various grades.

Voice-culture :

Questions on elementary vocal-physiology, tone-production and correct methods of breathing.

PART II.

TONIC-SOLFA NOTATION.

*First Book Classes.**Tune :*

- (a) The tones Doh, Me, and Soh with their octaves to be sung from the Modulator in *any* suitable key.
- (b) The above with the addition of Ray and Te.

Examples :

Key D.

(a) d s d m s d' m s d

Key F.

(b) d s₁ d t₁ d r s m r d*Time :*

- (a) Two-and three-pulse measures with whole-pulse tones and simple continuations to be sung on one tone to *laa*, or other suitable syllable.
- (b) Four-and six-pulse measure with half-pulse tones.

Examples :

(a) | d :— | d :d | d :d | d :— ||

(b) | d :d | d .d : d | d :d .d | d :— ||

Sight-singing :

- (a) Simple exercises combining the elements of Tune and Time prescribed at (a) above.
- (b) The same with the addition of Ray and Te, and half-pulse tones, but not necessarily containing different notes in each half of the pulse.

Examples : Key D.

(a) | d : m : s | d' :— : s | d' : m : s | d :— :— ||

Key F.

(b) | d : s | d : m . m | s : s . s | d :— ||

Ear training :

- (a) To imitate phrases of three tones sung to the syllable *laa*.
- (b) Tell the order in which the tones d m s are sung to *laa*.

Songs :

- (a) Simple songs learnt by ear.
- (b) Simple songs containing the elements of Tune and Time prescribed above, to be learnt by note.

Examples :

- (a) { Away among the Blossoms.
 { Good Morning, Merry Sunshine.
- (b) { See the Rain is Falling
 { Over the Snow.

*Second Book Classes.**Tune :*

All tones of the Common Scale with simple leaps, to be sung from the Modulator in *any* key.

Example : Key C.

d s m f r d m s d' t l s t d'

Time :

(a) Half-pulse continuations.

(b) Quarter-pulse tones, and silent pulses.

Examples :

(a) | d : d . d | d :- . d | d : . d | d : — ||

(b) | d : d | d, d, d, d : d | : d, d | d : — ||

Sight-singing :

(a) Simple exercises in combined Tune, and Time containing any tones of the Common Scale without divided pulses.

(b) The same with half pulse tones.

Examples : Key G.

(a) | d : s₁ | d : t₁ | l₁ : s₁ | d : — ||

(b) | m : d . m | r : s | l : f . r | d : — ||

Ear training :

Tell the name of any one tone of the scale on hearing it sung to *laa*.

Songs :

Simple unison songs containing no difficulties of Tune or Time greater than those described above, to be learnt by *note*.

Examples :

Lightly Row ; Evening Prayer ; Sun of my Soul.

*Third Book Classes.**Tune :*

(a) The Common Scale with leaps of moderate difficulty to be sung from the Modulator in *any* key. Simple Modulator exercises in two parts.

(b) Transitions of one remove with the tones Fe and Ta approached by step.

Examples :

(a) { Key D. d s m d' l f l s d' m s r t₁ d
Key G. { d m s m f s m f s m f r d }
{ d d t₁ d r t₁ d l₁ s₁ d l₁ t₁ d }

(b) Key D. d m r s fe s m f l s d' ta l s t d'

Time :

- (a) Pulses divided into one-half and two-quarters; two-quarters and one-half; three quarters and quarter. Half-pulse silences.
- (b) Pulses divided into thirds.

Examples :

$$\begin{aligned} (a) \quad & \left\| d : d, d, d \mid d : - \right\| d : d, d, d \mid d : - \left\| d : d, d, d \mid d : - \right\| d : d, d, d \mid d : - \left\| d : d, d, d \mid d : - \right\| \\ (b) \quad & \left\| d : d, d, d \mid d : - \right\| \end{aligned}$$

Sight-singing :

- (a) Exercises in combined Tune and Time with intervals of moderate difficulty and half-pulse tones.
- (b) The same with half-pulse continuations.

Examples :

$$(a) \quad \left| d : m, d \mid s : r \mid f : t, r \mid d : - \right|$$

Ear training :

- (a) Tell the names of *any* three tones in stepwise progression sung to *laa*.
(b) The same preceded or followed by one leap.

Examples :

(a) $s f m . l t d' . f m r . m r d .$
 (b) $d s f m . l t d' s . d f m r . m r d s .$

Songs :

Two-part songs adapted to the reading ability and general intelligence of the pupils.

Fourth Book Classes.

Tune :

Difficult intervals of the Common Scale with transitions of one remove, also simple exercises on the Minor Scale, including the leading note *sc*.

Examples : Key D.

d m f r r ^{A.t.} d t₁ d m l₁ t₁ ^{f.D.} d ₁ m f r d
l d¹ t d¹ l s e l m f r m l s e l

Time :

Review and combination of the various rhythms prescribed for junior classes, with the addition of quick six-pulse measure.

Examples :

$$\begin{array}{l} |d : d \text{ , } d | d \text{ . } d : d | d \text{ . } d, d : d, d, d | d : - || \\ |d : d : d | d : - : d | d : d : - | d : - : - || \end{array}$$

Sight-singing :

Exercises in combined Tune and Time, but not necessarily containing any divisions of the pulse of greater difficulty than halves, or half pulse continuations.

Examples :

Key E.

| d : m . d | f : m . | r : l | f : — | m : s . m | l : s | f : — . t . | d : — ||

Ear training :

Tell the names of any four tones of the diatonic scale when sung to *laa*.

Examples :

d f r m s r m d l s d¹ t . m l s d¹

Songs :

Two-part song adapted to the reading ability and general intelligence of the pupils.

Model Schools.

The practical work for Model Schools will be the same as for Fourth Book classes with the addition of the following syllabus in Musical Theory.

Tune :

Questions on the structure of the Major and Minor scales, and methods of pitching keys from an ordinary C tuning-fork.

Time :

Pulses, accents, simple forms of measures, continuations and Tonic-Solfa notation of Time.

Teaching :

Knowledge of the Music Syllabus prescribed for Public Schools, with ability to write examples of exercises adapted to the various grades.

Voice-culture :

Questions on elementary vocal physiology, tone-production and correct methods of breathing.

EDUCATION DEPARTMENT,
TORONTO, Nov., 1895.

MEMORANDUM FOR PRINCIPALS OF HIGH SCHOOLS AND COLLEGIATE INSTITUTES.

My attention has been called to an erroneous impression that prevails in a few places in the Province that German cannot be taught in the High Schools to pupils enrolled in Form I. As the new regulations were framed with the object of preventing as far as possible a multiplicity of classes, greater freedom was given to Principals in the classification of pupils. As an optional subject German was prescribed for Forms II, III and IV, and the pupils of Form I could take it up in any of the classes of these Forms with the approval of the Principal. In like manner and with similar approval any subject prescribed for the lower Forms may be taken up by pupils of the higher Forms.

In order to remove what may appear a discrimination against German, that subject will hereafter be one of the optional subjects of Form I—The Regulation reading "Optional:—Latin, Greek, French, German, etc." It should be understood that this amendment to the Regulations does not interfere with the authority of the Principal in fixing the order in which the subjects in Form I shall be taken up by the pupils. See Regulations 1 (2) and 2 (2) of circular 4.

TORONTO, NOVEMBER, 1895.

APPORTIONMENT OF LEGISLATIVE PUBLIC SCHOOL GRANT FOR 1895.

The apportionment of the Grant to the several Municipalities is based upon the latest Returns of Population for the year 1894 and the division between the Public and Separate Schools on the average attendance of that year, as reported by the Inspectors, Public School Boards, and Separate School Trustees respectively.

While the Separate Schools will receive their portion of the Grant direct from the Department, that of the Public Schools will be paid, according to this Schedule, through the respective County, City, Town and Village Treasurers.

The County Councils—whose duty it is to raise from the several Townships in their Counties a sum at least equal to the amounts respectively apportioned to each County—are reminded that *all the supporters of the Roman Catholic Separate Schools are exempt from any rate to be levied for this purpose.*

EDUCATION DEPARTMENT,
TORONTO, May, 1895.

PUBLIC SCHOOL APPORTIONMENT TO COUNTIES for 1895 for which an assessment is to be made by the County Council, in the several Townships in each county, sufficient to raise an amount at least equal to the amount apportioned to each County.

All Roman Catholic Separate School supporters are exempt from any rate for such purpose.

APPENDIX C.—PROVINCIAL NORMAL AND MODEL SCHOOLS

1. TORONTO NORMAL SCHOOL.

1. *Staff of Toronto Normal School, 1895.*

Thomas Kirkland, M.A.	Principal.
Wm. Scott, B.A.	Vice-Principal.
A. C. Casselman.	Drawing Master, and in Model School.
S H. Preston	Music " "
Eigene Massen	French Teacher.
Sergt. T. Parr	Drill and Calisthenics.

2. *Students in Toronto Normal School, 1895.*

	Admitted.	
	Male.	Female.
First Session	31	89
Second Session	35	58
Total	66	177

2. OTTAWA NORMAL SCHOOL.

1. *Staff of Ottawa Normal School 1895.*

John A. MacCabe, LL.D.....	Principal.
S. B. Sinclair, B.A.....	Vice-Principal.
T. H. McGuirl, B.A	Drawing Master, and in Model School.
W. G. Workman	Music “ “
H. McMeekin.....	Teacher of Elocution.
J. Fleury.....	French Teacher.
E. B. Cope	Clerk and Accountant, also Drill and Calis-
	thenics Master, and in Model School.

2. *Students in Ottawa Normal School, 1895.*

	Admitted.	
	Male.	Female.
First Session	39	50
Second Session	52	58
Total	91	108

3. TORONTO MODEL SCHOOL.

1. *Staff of Toronto Model School, 1895.*

Angus McIntosh	Head Master, Boys' Model School.
R. W. Murray	First Assistant "
Thomas M. Porter	Second "
Miss Jeannie Wood	Third "
" Sarah M. Ross	Fourth "
" Margaret T. Scott	Head Mistress, Girls' Model School.
" May K. Caulfeild	First Assistant "
" M. Meehan	Second "
" Alice Stuart	Third "
" C. F. Sutherland	Fourth "
" Mary E. Macintyre	Kindergarten Teacher.
" Ellen Cody	Assistant "

2. *Number of Pupils, 1895.*

Boys, 246	Girls, 244	Total, 490
Kindergarten		Total, 34

4. OTTAWA MODEL SCHOOL.

1. *Staff of Ottawa Model School.*

Edwin D. Parlow.....	Head Master, Boys' Model School.	
William Brick	First Assistant	"
J. H. Putnam	Second "	"
Miss H. S. Williams.....	Third "	"
" Adeline Shenick.....	Head Mistress, Girls' Model School	
" Mary G. Joyce	First Assistant	"
" M. E. Butterworth	Second "	"
" Florence Harrington	Third "	"
" Eliza Bolton	Kindergarten Teacher.	

2. *Number of Pupils, 1895.*

Boys, 133.....	Girls, 99.....	Total, 232
Kindergarten		Total, 45

APPENDIX D.—County Model Schools.

Name of Model School.	Name of Principal.	Certificate of Principal.	Salary of Principal.	Year of appointment.	Time Principal devotes daily to Model School work during the term.	No. of assistants with 1st class certificates.	" " 2nd	" " 3rd	" " other	What time daily did the assistant relieve the Principal from public work.	Is there a professional library?	No. of vols.	Amount of Municipal grant.	Received from fees.	No. of divisions in school.	No. of divisions used for Model School purposes.	No. of pupils sent at one time to a division to observe or teach.	Length of time students are trained before being sent to the divisions to observe.	Length of time students are trained before being sent to the divisions to teach.

APPENDIX E.—TEACHERS' INSTITUTES.

I.—ONTARIO EDUCATIONAL ASSOCIATION.

Extract from proceedings of Convention held in the Public Hall of the Education Department, Toronto, on the 16th, 17th, 18th and 19th days of April, 1895.

MINUTES OF THE GENERAL ASSOCIATION.

The Committee assembled on Tuesday, 16th April, 1895, Hon. Dr. Ross, Chairman.

COLLEGE AND HIGH SCHOOL DEPARTMENT.

Resolved, that the College and High School Department recognizes the Historical Association as an integral part of this Department.

Resolved, that the Commercial Section just organized be recognized as an integral part of the College and High School Department of the Ontario Educational Association.

Resolved, that the Minister of Education be requested to take such steps as he may deem necessary to distribute amongst the Members of the Legislature, City and Town Councils and Boards of Education, copies of the paper by Dr. Burwash on the Economics of Education.

Resolved, that while recognizing the importance of physical training in the High Schools, this Department is of the opinion that the time allotted to this subject, and the character of the exercise, should be left to the discretion of the Principals.

Resolved, that we reaffirm the general principle of the establishment of a general course in the University of Toronto.

MODERN LANGUAGE ASSOCIATION.

Resolved, that, in the opinion of this Association, it is a matter of regret that any attempt should be made to remove English Grammar and Philology from our senior classes.

MATHEMATICAL AND PHYSICAL ASSOCIATION.

Resolved—1. That this Association expresses its dissatisfaction at the proposed new Curriculum as it affects the standard of mathematical work in our High Schools, and regrets that gentlemen who are actively engaged in mathematical work in our High Schools do not appear to have been consulted in the preparation of the proposed Curriculum.

2. That in the opinion of this Association, Arithmetic should be continued through Forms III. and IV. of the High School course, and papers set upon Junior and Senior Leaving Examinations.

3. That the tendency of the limitations in the syllabus which are placed on mathematical work is to lower the standard in this department.

For example :

(a) The repetition of the word "easy" in different parts of the mathematical Curriculum.

(b) The omission of the "sphere" in Mensuration, "annuities" in Arithmetic, and "cube root" in Algebra.

4. That the limit in Algebra for the Primary Examination should be extended so as to include simple simultaneous equations.

5. That the Junior Leaving Euclid should be extended to include part of Book IV. and that the Senior Leaving Euclid should include ratio and proportion, similar figures, theories of Ceva and Menelaus with applications, properties of triangles and quadrilaterals, harmonic properties of lines and circles, properties of two or more circles, poles and polars.

6. That the marks assigned in Mathematics are not proportionate to the importance of the subject.

7. That it is exceedingly desirable that a gentleman actively engaged in the teaching of Mathematics should be admitted, in an official way, to the Councils of the Education Department.

THE MINISTER'S REPLY TO CERTAIN PROPOSALS MADE BY THE PUBLIC SCHOOLS DEPARTMENT.

1. He acknowledged the desirability of extending the time for training students at the Normal Schools to one year, and led the Committee to infer that he would keep it in view.

2. He expressed his approval of the recommendation of two years' preliminary training for those aiming to be teachers, provided it could be practically carried out. He thought it possible that the granting of an interim certificate for that period, during which those holding such certificates should teach under competent supervision, would accomplish the end we had in view.

3. In regard to our Public Schools being subsidiary to our High Schools, he maintained that our system is organic, and that the Public Schools are in the best possible position for the proper training of the children that attend them, quite irrespective of any preparation that has to be made for High School work; that the best possible condition for entrance to the High School is the best possible condition for training in our Public Schools, and if there were no High Schools in the country, he would not think it necessary to change the course of study in the Public Schools, except to add some training on elementary science and more literary culture.

4. Increased legislative aid to Public Schools, he thought, would come best in the form of increased facilities for the professional training of teachers.

5. He expressed himself as favorable to granting to rural teachers, who wish it, the right to take holidays to attend the Annual Convention.

6. He considered that Public School teachers were fairly represented on the Boards that examine the papers of candidates at the High School Entrance and Public School Leaving Examinations, and he maintained the principle that the teachers receiving pupils as a result of examination should have a deciding voice in saying what their qualifications should be.

REPORT OF THE COMMITTEE OF THE WENTWORTH TEACHERS ASSOCIATION ON THE ENTRANCE EXAMINATION, 1894.

Arithmetic.

(a) That the paper should consist of ten questions, valued ten marks each.

(b) That the marks be apportioned as follows:—

1. To Technical Terms—ten per cent. of total marks.
2. To Accuracy of Integral and Fractional Operations—twenty per cent.
3. To Measurements—thirty per cent.
4. To Commercial Arithmetic—forty per cent.

- (c) That no choice of questions should be allowed—thus avoiding the explanatory note at the head of the paper.
- (d) That Examiners be directed to give full marks to questions answered to the nearest cent in Commercial Arithmetic.

Drawing.

- (a) That the free use of instruments in book-work and at the examination be allowed.
- (b) That the paper should always contain a test of freehand drawing. The Committee was of opinion that the 1894 Drawing Paper might be taken as a model, were it not for the note at the head of it.

Grammar.

That marks be apportioned as follows :—

Analysis, 40 ; Parsing, 30 ; Inflection, 15 ; Correction of Errors.

Writing.

- (a) That there should be no questions on principles of writing until some well defined system of principles is authorized to be taught in our Public Schools.
- (b) That the paper of 1894 contains too much work for the time allowed.

Geography.

- (a) That in question 5 (a) the words, “and with Australia,” be struck out.
- (b) That the paper should contain more work on Canada.
- (c) That it should contain a test of map-drawing.
- (d) That the language should be more definite, see questions 4 and 6.

History.

That the Committee strongly approves of the apportionment giving two-thirds of the marks to Canadian History.

Literature.

- (a) That question (4) in A be struck out.
- (b) That more care be exercised in the selection of the italicized portions.
- (c) That questions like (4) in B are desirable as long as too difficult work is avoided.
- (d) That at least fifteen marks should be allowed for memorization,

RECOMMENDATIONS OF THE COMMITTEE.

Arithmetic,

Resolved.—1. That the paper should consist of ten questions. Candidate to take any eight.

2. That 50 per cent. of the value of the paper should be for commercial work, the remaining marks to be allotted according to the opinion of the Examiner.

3. That C be not adopted.

4. That D be adopted.

Drawing.

Resolved.—That the suggestions on drawing be adopted.

Grammar.

Resolved.—That the grammar paper be left to the judgment of the Examiners, but that as much prominence be given to original work as possible.

Writing.

Resolved.—That the suggestions on writing be adopted.

Geography.

Resolved.—That (b), (c) and (d) be made general. That (a) be not adopted.

History.

Resolved.—Your Committee recommends that “at least” be added to suggestions.

Literature.

Resolved.—Your Committee cannot recommend (a) or (b) or (c), but would suggest that more than eight marks be given for memorizing.

The Resolutions of the Waterloo Teachers' Association recommending,—

1. That the Model and Normal School terms be extended to a year.
2. That candidates for the Model School hold at least a Junior Leaving Certificate.
3. That the amount given by the township to each school section be \$200 and \$100 for each assistant.
4. That the age of candidates for admission to the profession be no less than twenty-one, were introduced by Mr. Linton and Mr. Fraser, of Berlin, and, after full discussion on the last clause, were almost unanimously adopted.

The Resolution from the Toronto Teachers' Association, opposing the granting of Professional Certificates to teach in Public Schools to graduates of the School of Pedagogy who have not had a Normal School training, was carried unanimously.

COMMITTEE OF REGULATION.

Resolved.—1 Section 16, sub-sec. 4: Amend to read. “In no case shall the Principal of a High School be also the Principal of a Public School.”

Resolved.—2. We approve of the proposed plan:

- (a) Of making the Primary Course extend over two years.
- (b) Of adding to that course the subjects, Botany and Physics.
- (c) Of allowing no option therein.

Resolved.—3. (a) That a Second Class professional Certificate should represent at least one year's professional training more than that of a Primary Teachers' Certificate.

Resolved.—4. (b) That the standard should be $33\frac{1}{2}$ per cent. on each subject and 50 per cent. on the whole.

Resolved.—(a) That it is desirable to have a Public School Leaving Examination.

(c) That the Regulations admitting pupils holding Public School Leaving Certificates to the Second Form of High Schools be repealed, and classification of such be left to the High School Master so long as the present Entrance Examination exists.

Resolved.—That the Public School Section of the Ontario Educational Association desires to thank the Honorable the Minister of Education for submitting to the Association his proposed regulations, and that the Minister be memorialized to the effect that in the opinion of said Public School section it would be of inestimable value to the educational interests of our province if all contemplated changes in the educational system were to be presented to the Association as has been done this year.

Resolved.—That for the purpose of uniform examination a Board of Examiners be formed in each inspectorate, consisting of the Inspector and three Public School teachers for each High School—head master to regulate the valuing of the answer papers at both the Entrance and Public School Leaving Examinations.

Resolved.—That in the opinion of this department, the Entrance Examination is not now a suitable standard for admission to High Schools; that the said examination be dispensed with as soon as practicable, and that the standard be more nearly in line with the Public School Leaving Examination.

Resolved.—That the work for Public School Leaving be such as can be thoroughly done in one year after the Entrance Examination.

In reference to Mr. Manning's motion, *Resolved* that

(1) Algebra be struck off the Public School Leaving Examination.

(2) The Arithmetic limit be shortened by cutting off all percentage questions involving the element of time, with the exception of simple interest, compound interest and discount.

(3) The limit of Poetical Literature be cut down one-half and that some short, simple and inexpensive prose work of one of our standard writers be substituted, in order to afford material for the proper teaching of English Composition.

Resolved.—That we approve of the action of the Minister of Education in extending the grant to all pupils who pass the Public School Leaving Examination.

Resolved.—That in the matter of Legislative grants, the Public Schools should be more liberally dealt with, and that the proportion of eight or nine dollars to one dollar per pupil in favor of High Schools is too great.

Resolved.—That we strongly recommend that more care be taken in the preparation of Public School Leaving Papers.

REPORT OF THE COMMITTEE APPOINTED TO PRESENT THE RESOLUTIONS OF THE PUBLIC SCHOOL DEPARTMENT TO THE MINISTER OF EDUCATION.

1. With regard to resolutions *re* Entrance Examination :

(a) The Minister approved of the recommendations in Arithmetic, but insisted on a test being given in accuracy and rapidity.

(b) The Minister did not approve of the recommendation of using rulers in Drawing.

(c) The Minister approved of the recommendation in Grammar, Writing, Geography and Literature.

2. With regard to resolution *re* Proposed Departmental Regulations :

(a) The Minister did not concur in the recommendation regarding section 16, sub-section 4, but approved in general terms of the others.

3. The Minister did not concur in our recommendation regarding the Board of Examiners for High School Entrance Examinations.

4. The Minister was favorably impressed with and will consider our recommendations regarding Public School Leaving.

5. The Minister expressed himself as favorable to the increased Township grant to School sections, but implied that the Legislature would not agree to it.

6. The Minister regarded the raising of the age limit to twenty-one as impracticable at present.

7. The Minister refused to discuss the recommendation regarding professional training and the School of Pedagogy.

KINDERGARTEN DEPARTMENT.

Resolved.—Upon consultation with the Minister of Education, we think the standard for admission to the Kindergarten training class should be a Primary certificate.

Resolved.—That a blank form shall be made out and given to the Directors that they may keep a record of the Assistant's work during the year; and that the work of the year and the essays written during the year shall be taken into account, in case of the failure of a capable student.

Resolved.—That a new syllabus shall be prepared and be in the hands of the Directors in time for the work of next year.

TRAINING DEPARTMENT.

Resolved.—"1st. That the non-professional standing be a First-Class Grade A Certificate or its equivalent.

Resolved.—"2nd. That the professional standing include at least five years' experience in Public School work on a higher grade of professional certificate than a Third Class, and that two of the said five years' experience be on a First-Class Professional Certificate.

Resolved.—"3rd. That permanent certificates as Model School Principals be granted to all persons who have had three years successful experience as Model School Principals, and to those now engaged as Model School Principals when they shall have completed three years successful experience; and to others when conditions in clauses 1 and 2 have been satisfied."

(1) *Resolved.*—"That a Section of the Training Department be now formed, having for officers a Chairman and Secretary, and that Dr. Tracy be Chairman and Miss Macintyre be Secretary.

(2) *Resolved.*—"That a Committee be now appointed with the object of carrying on some line of investigation during the year; that said Committee consist of Dr. Tracy, Chairman; Miss Macintyre, Secretary; Professor Hume; Mr. Scott, Vice-Principal, Normal School; Dr. MacCabe, Principal Normal School, Ottawa; Dr. McLellan, Principal, School of Pedagogy; Mr. Kirkland, Principal, Normal School, Toronto; Mr. Sinclair, Vice-Principal, Normal School, Ottawa; Inspector Hughes, Mrs. Hughes, Miss Bolton, Inspector Carson, Mr. Stevenson, Mr. Houston, Mr. W. H. Elliott, Mr. Suddaby, and any others who wish to co-operate with the foregoing in the object for which the Committee is appointed."

MODEL SCHOOL SECTION OF THE TRAINING DEPARTMENT.

Resolved.—That the Committee appointed by the Training Department to interview the Minister of Education with the object of laying before him the qualifications deemed necessary for the mastership of a County Model School, be requested to press upon the Minister the desirability of giving teachers holding certificates as Model School Masters the right of being County Inspectors.

Resolved.—That the following works be used in the course of reading for the Reading Circle, viz.: Felix Adler's Moral Instruction, Painter's History of Education, Baldwin's Psychology Applied to Education, and White's School Management; and for students, Preyer's Infant Mind.

INSPECTORS' DEPARTMENT.

Resolved.—That the fees of this section be 75 cents, viz., 50 cents for general association, and 25 cents to defray the expenses of this particular department of the Ontario Education Association.

Resolved, that the present method of auditing be retained, with the understanding that the Trustees be required to furnish an itemized statement to the inspector in addition to filling up the usual printed form.

Committee on "*How to Retain our Experienced Teachers*" recommends :

1. That the Public School Legislative Grant be materially increased.

2. (a) That the Municipal Grant be apportioned as now, on the basis of average attendance. (b) That the Legislative Grant be apportioned on a two-fold basis, as follows : That a small fixed grant of \$5 or \$10 be given for each teacher employed (for at least nine months of the year) who has a first or second class professional certificate. That the remainder of the grant apportioned to the municipality (township) be apportioned on the basis of the rate of taxation necessary to defray the ordinary expenditure of the previous year.

3. That the examinations in Practical Teaching in the Model and Normal Schools is given a higher relative value and made more exacting. That candidates at the Final Examinations of the Model and Normal Schools be required to make not only half of the total maximum assigned to practical teaching, but half of each of the totals on the basis of which the teaching staff and the examiners mark, as well as parsing in the written examination.

4. That no person should hereafter be permitted to act as Principal of a Model School who does not hold a First-Class A or Specialist's Professional Certificate, before receiving which he should have had five years' successful teaching in a Public School, that while in the possession of a First Class Professional Certificate. This recommendation is not intended to apply to those who already hold Model School Principal's Certificate.

5. That Third Class Certificates should be limited to the counties in which granted, or for which they have been endorsed.

6. That the representatives of the Public School Boards of Trustees on the Boards of Examiners for the Entrance and Public School Leaving Examinations should be actually engaged in teaching Fourth Class or higher work in Public Schools, and be the holders of First or Second Class Public School Teachers' Professional Certificates.

TRUSTEES' DEPARTMENT.

Resolved, that the provisions of the present school law with regard to High School fees are satisfactory.

Resolved, that for the purpose of examining and valuing the answers of the candidates for High School Entrance Examinations at some place within each county, there should be a Central or County Board of Examiners to be composed of (1) The Inspector or Inspectors of Public Schools within the bounds of the county ; and (2) two members possessing the qualifications at present required (one of whom at least shall be a High School Master actually engaged in teaching), to be appointed by each High School Board or Board of Education in the county ; and that such Board of Examiners should finally determine the fitness of entrance candidates within such county, subject only to an appeal by the candidate as at present.

Resolved, that the Honorable the Minister of Education be respectfully requested to consider the expediency and justice of making a larger distribution of the public money to the Public Schools.

Resolved, that inasmuch as a considerable percentage of the students of our High Schools drop out of the course at the end of the First Form, and go back to farm work, or take up trades, it is very important that there should be as full a course as possible in commercial work.

Therefore, this Department of High and Public School Trustees resolves that the commercial course should be made complete in the First Form of our High Schools.

Resolved, that as many Trustee Boards are considering practical mechanics of greater value than gymnastics, we would recommend that the Department of Education do not make it compulsory to have gymnasiums erected in connection with the High Schools or Collegiate Institutes of the province.

COMMERCIAL ASSOCIATION.

1. *Resolved*, that besides the Commercial Course in the proposed Form I., the Minister of Education be asked to institute a Commercial Form II., to include the following subjects: Obligatory—Bookkeeping and Penmanship, Correspondence, Business Forms and Usages, Phonography, Arithmetic and Mensuration, Reading, English Composition and Spelling, and Algebra; Optional—English Poetical Literature and Drawing—the rest of the Primary Art School Course.

And that the Education Department should set the examination papers of this course, value and read the answers, and grant a diploma thereon.

And that the Regulations should recommend that, in this form, the subjects of Bookkeeping and Phonography should be taught at least one hour each per day.

2. *Resolved*, that all students should be required to take the full Commercial Course of Form I.

3. *Resolved*, that the Bookkeeping sets and the Drawing books should be presented at the Commercial Examinations as heretofore, and that the work done in these books count for a certain percentage (say 10 per cent.) of the total examination.

4. *Resolved*, that the Departmental Examinations in Drawing and the Commercial Course should be held at the same time as the other Form Examinations.

5. *Resolved*, that one lesson per week in Writing, throughout the whole year, is better than three lessons per week during the First Term.

Resolved. 6. *Whereas*, the Commercial Course in our High Schools and Collegiate Institutes steadily deteriorated from the time that Departmental Examinations ceased, until again instituted in 1894, and that during 1894 and 1895 it has shown marked improvement, therefore, be it resolved that the examination papers in Bookkeeping and Drawing should continue to be set, and the answers to be valued and read by the Education Department.

7. *Resolved*, that candidates writing on the Commercial and Drawing Examinations alone, should pay a fee of one dollar; and that candidates who succeed in passing the said examinations and are desirous of writing on the other subjects of the Primary, be required to pay a fee of four dollars only.

8. *Resolved*, that in future, Examiners for the Primary Departmental Examination in the Commercial Course and Drawing, should be appointed from among the Commercial teachers of our High Schools and Collegiate Institutes.

2. Remarks of Inspectors on the Sanitary Condition of Schools.

COUNTY OF BRUCE, EAST.

W. S. Clendening, Esq., Inspector.

Teachers.—From my observations I would say the teachers as a class enjoy good health, and are not the peculiar victims of any particular disease.

Until of late years sanitary principles were so little regarded in the construction of rural schoolhouses that desirable ventilation is in many instances almost impossible, yet it does not seem to seriously militate against the general good health of our teachers. This result may be accounted for in part by the great majority of them being young and vigorous and such a small percentage remain in the profession for any lengthened period.

Of the 117 days lost by sickness thirty-five days were lost by one teacher, fifty-two days by five other teachers, leaving only thirty days to be lost by eighty-four teachers.

Pupils.—Though there are scarcely any organized sporting clubs, still football and baseball are quite commonly played on their own grounds; the girls often indulging in the latter as well as the boys. There is great difference in the heartiness and activity of children at play, but I met with no instance which could be called indifference to play.

Glasses are more common than ten years ago, but I have not observed that their necessity is any greater, rather that the people are better acquainted with their utility.

Schoolhouses.—Of the thirty-two schoolhouses not whitewashed during 1895, quite a number are kalsomined, boarded or papered. The attention given to whitewashing and scrubbing, compared with even five years ago, is quite encouraging.

Sweeping, as a rule, is well attended to, dusting not so well, but in about half of the schools the work is done by the pupils; no caretaker being employed.

School Grounds.—Several sites have no well, but the water supply is obtained from a spring or pump near by. Such instances I have counted as having wells in good condition.

The tidiness of the sites and fencing is only fair. Some have walks between the road and the schoolhouse, and some between the schoolhouse and pump, but as a rule rural sites have no walks at all.

We have a few instances where the sites are not large enough for the amusement of the children.

The closets generally have pits, but of late years quite a number are provided with drawers.

Permit me to observe, in conclusion, that the answers to such questions as "How many schools whitewashed or scrubbed during 1895," "Number of cases of epidemic diseases," etc., are only an approximation, because the questions were asked in some schools early in September, and in other schools toward the end of the school term. Also, that inspectorates composed in part of new or weak townships, such as are found in the Indian Peninsula, cannot present as favorable reports as inspectorates more favorably situated.

COUNTY OF BRUCE, WEST.

A. Campbell, Esq., Inspector.

Teachers.—The health of the great majority of the teachers of this inspectorate is very satisfactory. With the exception of a few cases of influenza, there has been very little sickness during the past year. In teaching hygiene in the school-room, the teachers study the general principles that are conducive to good health with most beneficial results. In cases where there is no structural provision for ventilation, the defect is remedied to a certain extent by having a good fire, and by keeping the windows slightly lowered from the top whenever practicable. I may add that the time which the greater proportion of the teachers remain in the profession is too short to afford a sufficient test of the consequences of unsanitary conditions.

Pupils.—Thirty-six pupils are reported to be feeble. Most of these are quite young, and except in cases that can be traced to heredity, they will no doubt grow stronger as they advance in years. Headaches are caused more frequently by indigestion than by the defects of the school-room. No serious cases have been reported.

I found nine pupils wearing spectacles, and about six more have slight symptoms of myopia. I do not think there is any increase in the number of cases of this kind during the last ten years.

I found a few cases of stooping and rounded shoulders, the result no doubt of unsuitable desks and seats. I did not find any cases of spinal curvature. In a large number of schools the desks and seats are excellent. The teachers as a rule are exercising commendable vigilance to prevent any injurious habits and improper positions on the part of pupils at their work.

During the last few years, the rural schools, with very few exceptions, have not suffered from overcrowding. In one school, with two departments, the attendance has been entirely too large for two rooms. After a good deal of urging and pressure, the trustees are now providing better accommodation by building an additional room.

The number of organized sporting clubs is very small, only twenty. It is a difficult matter to keep them up in rural schools, as the children that attend during the summer months are very young. The favorite games among boys are baseball and football.

Schoolhouses.—The arrangements made for sweeping, scrubbing and whitewashing are not satisfactory. In many instances the pupils sweep the rooms, and it is almost-impossible to convince the trustees, in many cases, that it is their duty to make any provision for this important business. By the voluntary efforts of pupils the work is well done. In a large number of cases the trustees employ a caretaker. All the rooms were carefully swept and dusted every day, with the exception of one, which was for a short time swept only three times a week. There is more attention paid to the importance of cleanliness than there was some years ago. Several rooms were scrubbed three times during the year, and all the rooms except eight were scrubbed at least once. I find it almost impossible to convince trustees of the necessity of whitewashing the rooms once a year. Forty-four schools were not whitewashed in 1895. Some of these, however, were whitewashed the year before, and most of the remainder were kalsomined some years ago.

School Grounds.—There is a steady improvement in the appearance and condition of the most of the school grounds and outbuildings. The forty-five placed in grade I. are upon the whole quite creditable. With proper underdraining, and some more improvements, about six more might be placed in grade I. Of the twelve placed in grade III., there was a very unfortunate choice made when they were selected. A few are too small, and from the nature of the ground they cannot be enlarged. Some are on the side of a hill, and consequently very unsuitable for a school yard.

There are 1,104 shade trees in a healthy condition, and very pretty flower beds are quite numerous.

The closets are not yet in a satisfactory state, but I am able to report a considerable improvement during the last few years. Trustees and teachers are being constantly urged to keep the closets in a proper condition, and in nearly all the municipalities the boards of health are rendering most valuable assistance.

Grading of Schoolhouses.—There is a marked improvement in the schoolhouses of West Bruce during the last ten years. Some very fine buildings have been erected during that time. Of the thirty-eight placed in grade I, two are built of stone and thirty-one of brick. They are commodious and substantial, and some of them are not only suitable, but also very attractive. Of the forty-four frame buildings which make up the remainder reported, five are placed in grade I. on account of their being large and comfortable. The most of the fourteen in grade III. are small and somewhat uncomfortable. The steady improvement in the matter of new schoolhouses is highly gratifying.

COUNTY OF CARLETON.

Archibald Smirle, Esq., Inspector.

On the sanitary report just submitted to your department, I desire to make the following observations:—*First*, of the one hundred and twenty-one teachers employed during the year 1895 in the rural schools of this inspectorate, I find but four who are not in the enjoyment of good health; and in these cases it appears to me a constitutional weakness, rather than any ailment incident upon defects in either the school-room or its surroundings. Although my report shows but seventy-seven (77) who have fixed rules for exercise, it must not be inferred that the remaining forty-four (44) altogether neglect a matter of so much importance. Many of them are compelled to walk regularly from half a mile to a mile to reach their boarding-house, thus averaging about two miles daily. Any young lady performing this feat, can scarcely be said to neglect physical exercise. Our young men require no urging in such matters. In this age of bicycles the tendency is rather to excess than neglect of exercise.

That our teachers and pupils are much inconvenienced through imperfect means of ventilating their close-rooms, goes without saying in many instances; but if permanent injuries have, to any considerable extent, resulted from this, my most careful observations and inquiries have failed to elicit the fact. Our teachers are alive to the advantage of an abundant supply of fresh air, and although “structural ventilation” has been overlooked in many of our best schoolhouses, there are but few in which the windows cannot be let drop a few inches from the top, thus affording a ready means of securing a frequent change of atmosphere. This plan is neither very convenient nor very safe, but until cheaper modes of combined heating and ventilating are devised, I fear that the rural schools must depend largely upon their windows, and the judgment of their teachers. I have observed no disease peculiar to the teaching profession. The few cases of defective vision that have come under my notice were not traceable to the school-room. When the defect was not natural, it could usually be accounted for through excessive work in lamp-light, or accidental injury.

Certainly our teachers are not working under the most favorable conditions, but when contrasted with the conditions under which public school work was done ten years ago, no one can fail to see that marked progress has been made.

Second—My report reveals the fact that thirty-five (35) pupils have attended our schools during the year, who, from various causes, are under the necessity of wearing spectacles. In the course of my fall visit, out of three thousand eight hundred (3,800) pupils in actual attendance, the number wearing glasses was ten. The remaining twenty-five (25) had been at school some time during the year, but not being present on the occasion of my visit, I am unable to say to what causes their infirmities may be attributed. In all cases that I had an opportunity of examining or inquiring into, it was quite

evident that the defect was due either to malformation, or to the effects of some disease, such as measles or nervous troubles. I believe, however, a finer test would show that many who do not wear glasses have vision more or less impaired.

From my enquiries, however, it appears that out of an enrolment of, say seven thousand (7,000) thirty-five (35) wear glasses. This is one in two hundred or one-half of one per cent.; certainly not an alarming state of affairs, and as far as my memory serves me, not in excess of ten years ago. Seventy-two (72) pupils bore signs of a weak constitution. Curvature of the spine, resulting from defective seating is rarely met with, but here and there a predisposition to rounded shoulders could be readily detected. No causal connection between these defects and habitual tendencies in school could be determined. As to prevalent diseases, scarlet fever was epidemic in sixteen (16) sections, diphtheria in twelve (12), measles in four (4), and typhoid fever in one (1), whooping cough being more or less general in many. In none of these instances could the origin of the disease be clearly traced to the school, but its dissemination and persistence may, in some measure, have been the result of carelessness or indifference on the part of the local school authorities.

Regularly organized sporting clubs exist in ten (10) sections, but in addition to this each season revives its round of games and exercises, into which nearly all our boys and girls enter with vigor and enthusiasm. Only sixty (60) pupils in the whole county were found indifferent to the attractions of the field and the playground.

Third—In cleanliness, tidiness and appointments generally, the schools afford evidence of an increasing interest and solicitude on the part of the people. Practically every room is swept daily. Only twelve (12) schools had not been scrubbed during the year, and nearly all of these are located on sandy ground, rendering frequent scrubbing unnecessary, in fact some of these appeared cleaner than those regularly washed. Of the forty-nine schools not whitewashed, quite a number are new, and being neatly finished in V-joint lumber, and either painted or stained and varnished, the use of the whitewash brush has been superseded.

The absence of structural ventilation will, no doubt, attract attention, but as I have already hinted, a fair system of window ventilation exists in nearly all the schools, and in addition there is usually an opening in the ceiling which can be made very serviceable in this respect. Roughly graded the schoolhouses stand as follows:—Forty-three (43), excellent; fifty-three (53), fairly good, and sixteen (16), poor.

Fourth—The school sites, as a rule, are of half-acre dimensions, many, in form a square, some oblong and four or five irregular. With few exceptions there is a lamentable want of taste displayed in laying out and ornamenting the grounds. Notwithstanding the large number of healthy trees reported (1,134), I feel safe in saying that one-half the school grounds are practically without shelter. Fences and gates are too often neglected, and in consequence the efforts of teacher and pupils to cultivate flower-plots have in most cases proved abortive. On the condition of the latrines I may say, encouraging signs of improvement have been noted in recent years. At the same time I must report that the inadequacy of present provisions, is in general a most serious menace to the health and morals of our public school pupils. It is with great difficulty that anyone can be found in the rural districts who will undertake the work necessary to maintain the closets in a sanitary condition, and I am of opinion that on this account the desired standard cannot be reached without the appointment of township scavengers. This is a matter in which the local boards of health might fairly be assigned a joint responsibility.

COUNTY OF DUNDAS.

Arthur Brown, Esq., Inspector.

Teachers.—The Number.—There are more female than male teachers. This affects the results. Fewer of the older boys and girls attend schools when under the charge of female teachers, and there is less efficient supervision of the out-of-door sports and conduct, and of the school grounds and appurtenances. Doubtless there are some compensations.

Age and Experience.—The average age of the teachers is twenty-four years, and experience, four and a half years. The average age would be still less, and the average experience would be reduced to three and a half years, if we left out of account four teachers between forty and fifty years of age.

Health.—The statistics show that the teachers of this county are in possession of more than commonly vigorous health. But four are reported of inferior health, and one of those has taught but four months. Of the eighty-four days lost through illness, forty-five days were lost by four teachers, in consequence of attacks of influenza, which leaves the average lost time for the remainder of the teachers at *half a day*. In no case have I been able to find that defects in the school-room caused the illness. Two things contribute to produce this most satisfactory condition: The thorough and regular physical drill in the gymnasium of the Collegiate Institute, and the thorough teaching of hygiene at the Model School, so that most of the teachers pay *habitual* attention to physical exercise, and to the proper ventilation of their school-rooms.

The Pupils.—Sight and Hearing.—Only two children were found wearing glasses, but several others should have had them. Myopia may be becoming more common in towns and villages, but I believe the reverse is the case in the rural sections. Fifteen cases of defective hearing were reported.

Health.—I found the children generally wholesome, ruddy, vigorous, and remarkably few of them pale and languid. Less than three per cent. are reported as feeble or delicate, but it is to be remembered that a larger percentage of these are likely to be *absent* on any given occasion, than of the healthy ones. I believe that the 279 cases of headache should be greatly discounted—children are apt to exaggerate. The greater part of these were in a few schools, some overcrowded and all ill-ventilated. The remedy is obvious.

All but five or six of the twenty-four cases of epidemics were whooping-cough.

Sports.—Four organized sporting clubs are as many as could be expected, outside of the villages, but in many sections football is a standard game, and in nearly all, outdoor active games and plays are participated in by girls as well as boys.

Schoolhouses.—Accommodation.—On a basis of average attendance twenty-six school-rooms, and on a basis of enrolment, sixty school-rooms have not the required air space. The former is too low and the latter too high; taking the highest attendance as a fairer standard, there are forty-one rooms that fall below requirements. In nearly as many, the floor space is quite too small.

Cleanliness.—I am glad to say that sixty schoolhouses are finished throughout the inside in wood, and painted, so that only twenty-seven have plastered walls and ceilings, and ten of these were whitewashed during 1895. All but twelve are swept daily, and all but three were scrubbed during the year. Several floors are kept painted, and I hope to see this become a general practice, for many considerations, particularly because it puts an end to wide cracks in the floor, filled with dust.

Desks.—Sixty per cent. of the rooms are supplied with improved iron desks, graded sizes, and in the remaining rooms the desks are very much better than the wooden boxes that they have superseded.

Lighting and Ventilation.—But six rooms have structural appliances for ventilation, and but nine have windows on weights, but nearly all the rest have the windows arranged so as to let down from the top, which although inconvenient, answers the purpose tolerably well. Very few windows are without blinds, though only about half have *good* ones. This is a matter that a brief time will put right.

School Grounds.—Elevation.—Too many of the sites are low and flat, the location having been determined by the “nearest point to the centre” of the section. Eight sites are bad, quite unfit for the purpose. Very few of those having sufficient elevation have been smoothed and graded.

Walks.—Some have walks from the gate to the door, but only five are fully equipped in this respect.

Fences.—These are generally in an unsatisfactory condition, and even when put in good repair, remain so but a short time. I report but fourteen as excellent, and a number have no fence in front at all.

Shade Trees.—The institution of Arbor Day has given an impetus to tree-planting, and I think there are not more than half a dozen sites without trees, and in many cases the trees have acquired dimensions that give a grateful shade and beautify the grounds. The number reported by actual count averages twelve trees to a site.

The Closets.—These are generally in a disgraceful condition. I report seventy out of 156 as good, but even these are not what they might be, and I may say that none are disinfected. The utmost I can secure is their being put in fair condition once a year, and in many cases only after withholding the school grant; at my next visit I find them in the old condition again. I am thoroughly convinced that but one means is available to secure a good condition of grounds and appurtenances. That means I refer to elsewhere.

Grading.—In grading the school grounds, I have taken into account, size, elevation and grading; fences and gates as to suitability and repair; trees; closets, as to repair and cleanliness; and location and screening. Only seven come up to No. 1, but a considerable number of those rated as No. 2, by a moderate outlay of time and money would be raised to No. 1.

SUGGESTIONS.

Although these are not asked for, they grow so immediately out of the points hereinbefore referred to, that I venture briefly to give some.

(1) Trustees should be required to submit plans and location of a new schoolhouse to the inspector for approval, before letting the contract. His disapproval *after the building is finished* does not remedy bad plans and small size.

(2) The style and material of school furniture should also be made subject to his approval. At present local workmen put in inferior, or useless home-made imitation of good desks, etc., etc.

(3) A new school site should in all cases be subject to the approval of the Inspector. He now has a voice only when a majority of the ratepayers and a majority of the trustees disagree, which is but seldom.

(4) A special public school grant divided on the basis of *continuous* good condition of schoolhouse and surroundings is, in my opinion, the only means by which a respectable condition of house, grounds, and particularly closets, can be *maintained generally*.

COUNTY OF DURHAM.

W. E. Tilley, Esq., Inspector.

Teachers.—The average age of the teachers of this inspectorate is 24 years, and their average time of teaching five years. Nearly all appear to be healthy, though but few report any regular system of exercise. Very many either use the bicycle freely, or take rather lengthy walks daily.

Pupils.—The summary report deals only with those pupils who were in actual attendance on the days of my visit to the various schools. 32 are given as wearing glasses. There were others—not a large number—who had weak eyes, or were short-sighted, and hence should wear glasses. I have no doubt but most cases of defective sight among our pupils may be accounted for either by our imperfectly lighted school-rooms, or the bad type used in some of our text-books. Blinds are a good thing if properly used, but too often they serve only to cover one-half or more of windows, which, in the first place, are both too few and too small. A large proportion of our rural pupils take their dinners with them in the morning, and are hence from home not less than eight hours each school day, hence the importance of good school-room and school-yard conveniences.

Schoolhouses.—A number of our schools are in good repair and in every way very suitable for school purposes, but too many are not what they should be in many respects, but especially in the matter of warmth and ventilation. A rural school-room is seldom easily heated in winter, as the walls are all exposed to the weather. This difficulty is of course increased when the foundations and walls are defective, the windows loose or panes of glass broken, the doors out of repair or lacking proper fastenings, and the floor thin and worn through in some places. But few of our rural schools are properly ventilated. Only in a few instances are the windows on weights.

School Grounds.—The usual size of the school grounds in rural sections is one-half acre. The water supply is, too often, far from being satisfactory; in some yards there is no well, and frequently where a well has been provided, the water is unfit for use. The closets commonly are too small, too much exposed, rough in construction, and in a few cases untidily kept. They are sometimes without doors that can be properly fastened, or walks leading to them, and in winter fill in with snow, or partially so, and become unfit for use.

COUNTY OF ELGIN.

Welbern Atkin, Esq., Inspector.

Teachers.—From the tabular report it will be seen that the great majority of Elgin rural teachers enjoy excellent health. The ill health of the few is not to be attributed to the unsanitary condition of schoolhouses, but rather to the fact that they do not take proper care of themselves, in taking proper exercise, and in other directions. In not more than half a dozen instances did I find the houses badly ventilated. There seems to be no disease peculiar to the teachers in Elgin.

Pupils.—The health of pupils is particularly good. Only seventy-six appear to be weakly, and this I believe is not due to defect in the schoolhouses. Only twenty-four wear glasses, and I am inclined to think all who need them are provided. Light is always sufficient. The defect is in the fact that cross lights so affect the blackboard that writing thereon cannot be seen from all parts of the room. Teachers soon gain such experience as enables them to properly shade the windows. Only twenty-two have defective hearing. Generally the children have good physique. I find no cases of spinal curvature, and very few instances of rounded shoulders. Our teachers are generally vigilant in

this direction, giving a good deal of attention to physical culture. As seen by the tabular report, only ten sporting clubs are organized among the boys; nevertheless almost all engage in active games.

Schoolhouses.—Generally school rooms are very satisfactory. Only five of the 102 are below the regulation requirements in cubic contents. While 58 are reported not whitewashed in 1895, with five or six exceptions these were whitewashed in 1894. In most cases satisfactory arrangements are made by the trustees for scrubbing and sweeping. The seats and desks, with three exceptions, are satisfactory. While eighty rooms are reported without structural ventilation, these are ventilated by trap doors in the ceilings, and a change of air is secured by the lowering of the windows.

Grounds.—Six of the 102 sites are below the regulation requirements in size. A few are untidy, though the sites are generally satisfactory in this respect. The grounds are generally well drained. Walks are provided in most cases from the gates to the doors, but there is a great lack of walks from the houses to the closets. The closets are generally well looked after. Feeling the importance of the effect that the neglect in this respect may have on the morals of the children, I always inspect the closets and report to the trustees. While thirty-eight instances appear where closets are not screened, the fences dividing the yards back of schoolhouses screen them from each other. I report with confidence in this particular because of the unremitting attention I have given it.

Grading of Houses—Grade I. Fifty-three houses. Substantial. Comparatively new; brick or wood; newly painted; furniture satisfactory; neat and clean.

Grade II. Forty-three houses. Older; not kept properly painted; some defect in windows, doors, furniture, walls or ceilings.

Grade I. Six houses. Not substantial houses; not comfortable; cold in winter; should be replaced by new ones.

Grading of Sites.—Grade I. Sixty-nine. Sufficient in size; good fences and gates; satisfactory walks and closets; provided with sufficient shade trees.

Grade II. Twenty-seven. Poor fences or gates or closets; lack of walks or shade trees.

Grade III. Six. Too small; poor fences, gates or closets; lack of walks or shade trees.

COUNTY OF ESSEX, SOUTH.

D. A. Maxwell, Esq., Inspector.

Teachers.—You will notice by the small number of days (64) lost by sickness during 1895 that the health of the teachers in this district is good. The sickness during the greater part of this time was caused by two cases of mumps, one of scarlet fever and one of typhoid fever—three of which are not preventable. While there was not much absence from school, by illness, there were several cases of slight indisposition, caused by so-called “biliousness,” which is indigestion brought on by injudiciousness in eating and exercising. Nearly all the teachers tell me they “take a walk,” but on close inquiry I find the “walk” may be but short and without a purpose, beyond “a walk.” This is not sufficient for exercise, for, not having a purpose, they soon weary of the exercise, and fail to break away enough old tissue to allow recuperation to be active. There is great need for more careful instruction in the laws of health. There is a small “gymnastic arrangement,” consisting of a light iron frame, weights, pulleys and cords, suited to small rooms, that is of great value to sedentary people. I am satisfied that nearly all the teachers’ diseases are induced or aggravated by injudicious dieting and a lack of well-regulated exercise, causing indigestion and constipation, thus fouling the whole system. Attention to these matters and a better use of such means as may be extemporized for ventilating the school-room and the sleeping apartment would do much to maintain the teacher’s health or to improve it.

Pupils.—I have found many children suffering from headache, the causes being cross lights in the school-room, glossy blackboards, over-exertion from the distance travelled to school, injudicious dieting, and constitutional derangement with girls attaining the age of puberty. Headache prevails more with girls than with boys. Only five wear glasses, but quite a number are "short-sighted." The defect was not noticeable in using a book, but was in reading from a blackboard. As I have at nearly every visit insisted on pupils maintaining easy but correct positions, teachers are in general careful in this matter, so that I have not noticed more than six or seven cases of tendency to round shoulders or spinal curvature in the eighteen years I have been in this county. The seating is generally well suited to the ages of the children, but teachers frequently err, in seating them, when they try to have all members of the same class sit in the same vicinity.

Games.—Football, baseball and running games prevail largely in the rural schools. We have sought to encourage such exercises for the school as a whole, but we have not encouraged the formation of clubs. The tendency in clubs is to be too select, too clannish, too much against the cultivation of a spirit of helpfulness to the less favored of the race. Not the love of the game for its helpfulness is engendered, but the desire to excel some other club, hence every boy who in any way would be a weakness to the club is excluded from it. Rivalry of clubs leads to unnecessary expense and to distraction of attention from work. The principal in one of our village schools has for two years had great difficulty in getting his fourth class boys to work well in school, because they had "club-on-the-brain." Our experience has been unfavorable to the formation of clubs for games. The fact that in most of our schools the manly games are followed without the manly vices accompanying "clubs" is to us sufficient proof that "clubs" are not to be encouraged. The spirit of the game can be secured without the introduction of the vices of the club. Eternal vigilance is the price of virtue with the young.

Schoolhouses—In all but three cases, sweeping is done by caretakers, after school hours, dusting being done in the morning. Scrubbing is in most cases done in summer holidays only. Whitewashing is done once in two or three years. Several of the schoolhouses are ceiled with varnished native wood, and are not supposed to need whitewash. Two or three buildings are neatly papered and appear quite homelike. I do not think these are desirable, because the dampness necessarily existing on the walls holds dust, in which disease germs may propagate. Plastered walls are warmer than ceiled ones and more easily disinfected than either ceiled or papered ones. It is respectfully recommended that school authorities shall be required (1) To scrub or wash the school-room floor monthly; (2) To whitewash or kalsomine the walls and ceiling annually.

Grounds.—While twenty-eight of the school premises contain only one-half acre each, the rest contain from three-quarters of an acre to an acre and a-half each, giving an average of nine-elevenths of an acre per school. It seems to me that no school enclosure should contain less than an acre; and when there are more than forty pupils, that there should be an acre and a-half, that there may be room for four sets of games suited to the sizes of the pupils—two for girls and two for boys. On a small ground there is of necessity an intermingling of larger and smaller children and of boys and girls, frequently causing accidents and irritation of temper, etc., which should be avoided. We have had great difficulty in getting trustees to enlarge the school premises beyond the half-acre. There is only one school—that on Point Pelee—where children play on the roadway. The schoolhouse is in a red cedar grove, the school grounds being unlimited or unfenced. The unsurveyed roadway passes through the only clear space near the schoolhouse.

Closets.—especially those for boys, are not well kept. The powers given the inspector are not sufficient to secure care in this particular. "Boards of health" are not active enough in enforcing the law, so that it is useless to appeal to them. Give the inspector power to bring the delinquents before the magistrate, or to withhold the school grant, and better results will be secured, without more friction than exists now. Probably if the law would compel "boards of health" to proceed against the trustees when the inspector prefers a charge or makes a complaint in such cases, much good would result.

COUNTY OF GLENGARRY.

D. McDiarmid, Esq., Inspector.

TEACHERS.—The insufficient sum generally paid teachers for their services, is the chief reason for the shortness of the average time spent by them in teaching, as well as the principal factor causing the disproportionate number of the sexes, found in the ranks of the teaching profession,—in which the female largely outnumbers the other sex.

The state of the health of the teachers was good, notwithstanding that only seven out of eighty-three, were reported as having devoted a certain time to the taking of physical exercise. However it must not be supposed that the remainder neglected this absolutely necessary means for the vigorous development of their bodies and the keeping of their functions in a healthy condition. In addition to the long walks needed to reach the schoolhouses and return to their lodgings, many of them took part in the games in which their pupils were engaged.

The teachers who had been for a long time in charge of schools, enjoyed as good health as those who lately entered on their school duties. That they did not suffer in health from occupying school-rooms in which violations of sanitary laws daily occurred, may be accounted for in that these are often found on high, dry and hard sites, near clumps of trees, and at some distance from inhabited dwellings.

Ventilation.—It is true that in a large number of the schools, no special provision has been made for the ingress of fresh air and the outlet of that vitiated. Notwithstanding this lack it is very rarely, that a person entering a fully occupied rural school-room, can detect any indication of the presence of foul air. In summer the open windows and open doors permit a free interchange of the external air and that in the school-rooms. While in winter the glowing wood fires in the stoves, keep up a constant movement of the air, that escaping through the fire and chimney, being replaced by an equal volume, entering alongside of the loosely fitting windows and doors.

During the spring and autumn months a considerable quantity of dust is daily deposited on the school-room floors, from the mud adhering to the children's shoes. The movements of the classes cause some of it to be mixed with the air, which when breathed, must be injurious to the occupants of the rooms.

The almost invariable good state of health enjoyed by the teachers, is in no small measure due to their regular habits.

Pupils.—The pupils of the schools of the County of Glengarry, are mentally and physically equal to their predecessors.

It is very probable that the number of our children wearing spectacles, would be much greater, than reported, were the parents influenced by the opinions of inexperienced medical practitioners calling themselves eye specialists.

Physical defects are seldom seen in the pupils who are comfortably clad and well nourished. From infancy they spend a great part of the day in the open air, helping at the never-ending round of work going on at their homes, or engaged in the sports which are suited to the various seasons, such as "coasting," "skating," "shinty," "lacrosse," "base-ball," "foot-ball," etc. They who have thus been accustomed to the extremes of temperature, incident to our very changeable weather, do not appear to have been injuriously affected by the unsanitary state of some of their surroundings.

School houses.—Internally the walls and ceilings of not a few of them, are lined with narrow painted or oiled planed and grooved lumber. Others have the ceilings and the upper parts of the walls lathed and plastered, while the lower parts of the walls are wainscotted. A very few samples of the whitewashed hewn logs forming the walls, may still be seen.

The floors were swept daily by the pupils, the few exceptions when this was not the case, were those in which this duty fell to the lot of the caretaker. Persons were employed to scrub the floors at uncertain periods which were not so frequent as could be desired.

The school-rooms were generally clean, especially in the winter and during dry weather.

A special provision for ventilation, was seldom seen. Communication between external air and that inside, was made by trap doors in the ceilings and by the windows and doors.

Classification of the Schoolhouses.—The schoolhouses may be divided into three grades, those in the first, having been finished externally and internally, in a neat workmanlike manner, of good materials and provided with excellent school furniture and apparatus. Those of the second grade are similarly provided, but from age and use, have not such a good appearance as those in class I. In the third grade the buildings and contents are poor.

School Grounds.—These are commonly well drained, owing to their having been selected from elevated portions of land. Very seldom have proper walks been made, leading from the highway to the schoolhouse door, or from it to the other buildings erected on the site.

A few of the school grounds are enclosed by substantial fences. Others are only partially so,—the portion along the highway being that left unfenced. The area of each is one-half of an acre—some contain more than this and others less.

The closets are not kept in good condition, and occasionally complaints have been made of their being damaged by unknown persons, after school hours.

Trees are yearly planted by the pupils, but as they are not cared for till they acquire a good growth in their new positions, many of them die.

Drinking water is ordinarily obtained from wells belonging to residents of the neighborhood. For obvious reasons the water procured from these, must be more wholesome than that from wells sunk in the school grounds.

In the statistical report the school grounds have been classified as follows, viz :—

1. Those forming a portion of high, well drained lands, and provided with the requisites demanded by the regulations of the Education Department.
2. This class is similar to the first but the requirements are not so good.
3. This includes those in which the grounds are low and either not provided with the necessary buildings, etc., or only with some which are often very inferior.

COUNTY OF GREY, SOUTH.

N. W. Campbell, Esq., Inspector.

Teachers.—In general, the health of the teachers is good. Only one is classed "inferior." Although over 150 days are reported lost through illness, most of these were lost by three teachers, two of whom had typhoid fever and the other malarial or low fever, induced by constitutional weakness. In only three instances is cause of illness attributed to the schoolhouses or school work. The few days lost on account of illness, other than the three above referred to, were generally in consequence of prevailing influenza or other epidemic diseases in many of the sections. Some schoolhouses are too cold in winter for either work or health, but the condition in this respect is gradually improving for the better.

With regard to the ailments incident to the teaching profession, I would say from observation and from enquiry of those who are older in the profession, that the most common are nervousness and throat troubles, the latter deepening sometimes into pneumonia and ending fatally. Most of the teachers have not yet had sufficient experience to be able to give an opinion on this subject that would be of value from an experimental point of view. The following classification of the teachers will show this:—Out of ninety five teachers sixty-two have had not more than five years' experience ; seventeen had from six to ten years ; six had from eleven to fifteen years, and ten had over fifteen years. Those in the first class, as a rule, know nothing of any physical disability arising from or consequent upon their work or surroundings.

One of the great dangers to health which teachers are exposed to in country districts is the distance in very many places of suitable boarding houses from the schools. Very many suffer in this respect, but there does not seem to be any remedy to prevent exposure from this cause.

Pupils. — Out of nearly 3,500 pupils only seventeen wear glasses. I found by tests and enquiries, more than twice this number who should wear glasses, but who do not. My impression is that defective vision is not so common as formerly. This is, I think, owing to the better lighting of schoolhouses and to the dissemination of more accurate information regarding the care of the eyesight. Most of the cases observed were traced to early childhood, or to heredity. In my opinion, parents, as a rule, are ready and willing to provide glasses for their children, as soon as they are satisfied there is need for them.

Owing to the more comfortable modern school desk, there is little spinal curvature, rounded shoulders, or deformity of any kind seen. The statistical report shows some few schools yet unprovided with good seats and desks, but these schools are becoming fewer in number every year.

Many teachers, I regret to say, are, or seem to be totally indifferent as to the position or appearance of their pupils while at their seats. Through this indifference, many pupils acquire a slouchy, ungainly habit of sitting and acting, which cannot but be a hindrance to their advancement in life.

As to overcrowding, my experience is that it is evil and that continually. It prevents proper teaching—at best, only superficial work can be done. It induces habits of idleness and disorder, except under a very strong teacher. The pupils become restless and cannot give the attention necessary to successful study. Foul air and consequent irritability, ill-temper and even ill-health are usual accompaniments of overcrowding, especially where teachers are not careful of ventilation during the recesses. As for the enjoyment of the pupils, I think the system of government practised by the teachers has more to do than their surroundings.

There are few organized school clubs in South Grey. Free outdoor games and exercises are the usual amusements in the rural schools. In the summer season when matches could be played, the larger boys are mostly absent, hence the clubs are broken up. It would be better, however, if teachers would take a greater interest in the outdoor sports of the children than they do at present.

Schoolhouses. — As to cleanliness, a great improvement has been made in recent years. Formerly, the majority of the schools were scrubbed but once a year, while many were untouched for even longer periods. That has now been changed. The majority are now scrubbed two, four or six times a year. The sweeping also is done daily and generally well done. It should be made compulsory to sweep all school floors *after school hours*. Very many of those now swept by the pupils are swept during the noon recess.

The whitewashing of walls and ceilings is likewise better attended to than formerly. Most are whitewashed when it is shown such is required. Trustees are generally attentive to such duties.

In interpreting "structural ventilation," I have classed those schools having a manhole in the ceiling and windows which can be lowered from the top, as possessing structural ventilation. Besides these primitive ventilating appliances many of the schools, especially those recently built, have ventilating flues in connection with the chimneys, which are of some use.

Two or three classes of buildings should be prohibited for school purposes. First, stone and brick houses in which the inside plastering is done on the wall, without air space or lathing. These are, as a rule, bitterly cold in winter and are unfit for either teachers or pupils. In such cases too, the walls generally sweat, shortly after the fires are lighted, thus loading the air with moisture, which causes many pupils to contract severe colds. Secondly, shell-frame buildings, which are usually too cold in winter to secure the comfort of the pupils. It is not necessary to say that during winter satisfactory progress cannot be expected in such schools.

School Grounds.—The school grounds are generally in good order. Most of them are level, dry and suitable for play grounds. Very great difficulty is experienced in some sections in getting good water on the school grounds. Many schools, by arrangement of the trustees, are supplied with water from some neighboring well. The condition of the closets is not in many cases what it should be. Every year the attention of the trustees is directed to this subject, but many are either indifferent as to their condition, or are unable to obtain some one to put them in proper order. In many cases I have been compelled to warn them that the grant would be withheld unless the closets were given the necessary attention.

In very few school grounds are walks of any kind built in necessary places. Most yards do not require any, but very many would be greatly benefited if such were constructed.

5. Grading of Schools.—In recent years, there has been great improvement in the class of buildings erected for school purposes. Those classed grade I. are stone, brick or first-class frame or concrete, which are comfortable and fitted with modern conveniences. Those graded II. are generally not so comfortable or in proper repair. Those graded III. are old buildings, which, though perhaps roomy enough, are out of repair and are therefore cold and uncomfortable.

Of school grounds.—Those grounds graded I. are large enough, far removed from swamps or standing water, so as to be in first-class sanitary condition, and are level, well-drained and suitable for play-ground purposes. Those graded II. are below the above in the several points mentioned, and those graded III. are those which are not properly fenced or levelled, or far enough removed from low ground to be in good sanitary condition.

Of school-fences.—Those graded I. are either wire or board in first-class repair. Those graded II. are board fences, which are not in first-class repair, and those graded III. are those built of rails, or lumber, and are badly out of repair.

COUNTY OF GREY, WEST.

Thomas Gordon, Esq., Inspector.

Teachers.—The result of the inquiries made respecting the physical condition of the teachers in West Grey inspectorate indicates that generally they enjoy good health. Very few of them have any stated rules for exercise, but almost all have some what lengthened daily walks in going to and returning from their schools, besides which Saturdays are generally availed of for visiting friends, or for attending to business in town. Only fifty-one days were reported as having been lost owing to sickness, which period was distributed among thirteen persons, thus:—One, ten days; two, eight days,

each ; two, two days, each ; one, five days ; one, four days ; one, seven days ; five, one day, each ; indicating that the illnesses were nearly all of a very fugitive character. No complaint was made that the sickness arose from school-room defects, although it is undoubted that such exist in too many instances.

Pupils. — The wearing or the use of spectacles by the pupils may be described as non-existent, there appearing to be no necessity for the practice. Schoolhouses are almost universally conveniently arranged and well lighted, so that there is no strain of any kind on the eyes. There is no overcrowding, and the atmosphere of the schools is very seldom appreciably vitiated, and in the absence of these provocatives to a feeling of languor or of restlessness, the children are generally cheerful and good-natured. The seating and the desk accommodation are such as to afford a commodious posture, and to militate against a habit of ungainly stooping, so that pupils universally present an upright carriage, and a straight, well-defined figure. Sports of all kinds requiring agility and promptitude prevail in every school, imparting strength and vigor, and are partaken in by all hands with admirable zest and enjoyment, teachers very frequently included, the best teachers commonly joining in the most freely. The play-hour is an hour of cheerful freedom and relaxation, and all appear better natured for having been participants.

Schoolhouses. — These have been divided into three grades—the first comprising those built of brick or stone ; the second, frame buildings of the better class ; the third, frame buildings of an inferior and more or less neglected class. The arrangements for sweeping, scrubbing and whitewashing are seldom satisfactory or efficient. Sweeping is commonly done daily by teacher or pupils, or by teacher and pupils, the cases in which a caretaker is appointed to attend to such duties being very few. Whitewashing and scrubbing are very much neglected, notwithstanding the fact that attention is frequently drawn to the need of as absolute cleanliness as possible. There has been much improvement in this particular, and some drastic remedy for carelessness should be provided—such as empowering the inspector to get the work done and pay for it from the school grant. Experience has shown that in the providing of better schoolhouses the withholding of the grant has proved effectual in producing compliance, and it can scarcely be doubted that Trustees would prefer to get the required improvement made themselves, to having it done otherwise.

School Grounds. — These have been divided into three grades—first, those which are in all respects suitable : second, those which from natural causes are not well suited for playgrounds ; third, those which cannot by ordinary means be rendered sufficient.

In the first grade, the grounds are commonly free from impedimenta, but the absence of woodsheds in a number of them is a preventive of tidiness. In the second grade, inequalities of the ground and the presence of large stones interfere with their full use. In the third grade, the formation of the grounds and their surroundings render their full use impracticable. The necessity for having the grounds approximately convenient to the centre of the school section has led to the selection of a number of these sites.

With respect to the closets, it is necessary that some imperative method shall be adopted to insure compliance with the regulations. The cases in which this compliance is now given are rare, and it is found useless to complain. The inspector should have power given to him to apply the school grant to the furnishing of the required remedy, in cases where neglect exists, and it should be made plain to trustees that this mode of dealing with the subject has been adopted because of the remissness of the section authorities.

COUNTY OF HALDIMAND.

Clarke Moses, Esq., Inspector.

The fact that during the year 1895 only twenty days were lost by eighty-two teachers on account of sickness speaks volumes for their uniform good health.

Although comparatively few teachers practise regulated exercise (calisthenics, etc.,) yet I fancy that teachers of rural schools, through the walking that is required from most of them, receive about all the exercise that is necessary. On the whole, walking, which is most readily secured and is within the reach of all, is as conducive to good health as any regulated exercise. To teachers confined in the school-room no exercise can be more beneficial, if taken at the proper time and with a due amount of energy.

Little can be said for a majority of the schoolhouses in the county, as regards ventilation. A large number of the buildings were constructed in the days when little attention was given to such matters. In these, ventilation is secured from the judicious use of windows and doors, but in the schoolhouses of recent date the mode of ventilation, as well as the method of heating, is more in accord with scientific principles.

On the whole the schools are fairly well lighted, although the light may not be admitted to the rooms after the most approved plan, yet from the proper use of window-shades the light may be so regulated as to have little injurious effects on the eyes of the pupils.

The school grounds are, on the average, up to regulation size. The trouble is, regulation size is too small. It is extremely difficult to have the school grounds made "things of beauty" when the size of the plot is but one-half acre. In this country where land can be so cheaply and easily secured no school grounds should be less than one acre in extent.

Taking everything into consideration I feel satisfied that with respect to the efficiency of the teaching staff, and the character of the school buildings and grounds, the county of Haldimand is making progress from year to year and is keeping pace with the forward educational movement.

COUNTY OF HALTON.

J. S. Deacon, Esq., Inspector.

Teachers.—Of sixty-one teachers in the rural schools of Halton, fifty-six have excellent, and five good health. The fact that their average age is only twenty-four and their experience five and a half years, will account for this high standard of health. Youthful vigor, temperate and regular habits, modern school-rooms, extended vacations, and a salubrious air counteract greatly the enervating tendencies of the profession.

During several years, I have noticed that teachers suffer most from weak eyes. The examination of exercise books and slates at class and seats under every variety of condition as to size and quality of writing, amount and direction of light, etc., etc., tends to produce myopia, inflammation, etc. For several years, ninety per cent. of our school-rooms were seated so that teacher and pupils faced the light, and much injury was caused thereby to the eyesight, but this has been changed. The voice is often injured by the habit of excessive talking in a high key, and by an excess of chalk dust.

The multifarious claims upon the teacher's attention in management and teaching, are a severe strain upon the nervous system, more particularly in crowded rooms and in urban schools. Better training for their work and better environments generally, have relieved the rural teacher of many sources of mental depression.

Pupils.—Spectacles are worn by pupils more now than ten years ago, but this is accounted for by the ubiquity of travelling opticians and the increased ability of parents to provide for the wants of their children, rather than by excessive study or defective school-rooms. The accompanying schedule shows that fifty nine of the sixty-one school-rooms are provided with excellent blinds on spring rollers—a vast improvement on ten years ago. Our excellent desks and the practice of calisthenics, together with increased care on the part of teachers, prevent many evils that were prevalent with untrained teachers and defective seats. There are only two organized clubs in the rural schools, but there is no lack of physical exercise. Girls and boys play baseball; football is played in a majority of the school sections; cricket in a few; and running games of endless variety prevail everywhere.

Schoolhouses.—Much improvement has been made in the matter of cleanliness, though nine school rooms are reported not scrubbed, and twenty-five not whitewashed in 1895. Some schoolhouses on gravelly soil with good walks, good floors, and small attendance, keep cleaner for a year than others that are scrubbed quarterly. Then, many of our schools have wood ceilings and painted walls, so that no whitewashing is needed. Eleven rooms are swept only three times a week, the rest (fifty), daily. In seven schools the pupils do the sweeping; in six others, the teacher; in the rest, a caretaker is employed.

School Grounds.—All the school sites are fenced, and only three are graded inferior as to condition of fences and gates. They have been (where necessary) drained and levelled. Honest effort has been manifest in tree planting, but the very dry seasons of recent years have proved fatal to maples on our heavy clay soil.

There are 583 healthy trees, which is an average of twelve and a fifth to each site of four-fifths of an acre. In all classes recreation is taken exclusively upon the school premises—not upon highways or private property. By unremitting perseverance, and considerable pressure upon trustee boards, we have secured great improvement in the construction of closets, and in the frequency and regularity of removals and disinfection. At my recent round of visits I found seventy-five per cent. in good to excellent condition. “Eternal vigilance is the price of safety.” I find it necessary to be watchful at every visit, and to report abuses or neglect, at once, to the trustees.

The filling in of the “Special Report” blanks will probably secure greater attention to these matters on the part of teachers.

Grading of Schoolhouses and Grounds.

Trafalgar :

- S.S. 1 Good, brick, fairly neat, acre, excellent fence, three trees.
- “ 2 Excellent, brick, neat, pictures, etc., acre, excellent fence, seventy-five trees.
- “ 3 Inferior, brick, old, small, half-acre, joined with church, ten trees.
- “ 4 Good, frame, neat, well painted, half-acre, level but bare, thirteen trees.
- “ 6 Excellent, brick, neat, painted walls, etc., acre, level, seeded, thirty trees.
- “ 7 Good, frame, neat, painted walls, etc., half-acre, grounds uneven, seven trees.
- “ 8 Excellent, brick, neat, painted, wood ceiling, half-acre, even, exc. buildings, seventy-two trees.
- “ 9 Excellent, frame, very neat, well painted, half-acre, even, twenty-five trees.
- “ 10 Good, frame, old, neat, tinted walls, acre, exc. buildings, thirty-six trees.
- “ 11 Good, concrete, old, fairly neat, seats only fair, half-acre, exc. buildings, eleven trees.
- “ 12 Good, concrete, good appointments, acre, even, neat, etc., twenty-five trees.
- “ 13 Excellent, concrete, very neat, always clean, acre, even, very neat, sixty-six trees.

Trafalgar:

- S.S. 14 Inferior, frame, old, cold and common, acre, uneven, closets poor, sixty-five trees.
- " 15 Excellent, brick, neat, well painted, tinted, etc., one and a quarter acres, excellent, sixty trees.
- " 16 Excellent, brick, new, neat, one and a half acres, well grassed and shaded, 100 trees.
- " 17 Excellent, frame, very neat, one acre, superior site, fourteen trees.
- " 18 Excellent, frame, very neat, one acre, superior site, seventy-five trees.

Esquering:

- S.S. 1 Good, frame, well cared for, neat, half-acre, flower beds, twenty-five trees.
- " 2 Excellent, brick, fairly neat, one acre, superior site, fifteen trees.
- " 3 Excellent, brick, very neat, well painted, half an acre, good site, twenty trees.
- " 4 Good, frame, very neat, well painted inside, one acre, excellent site, twenty-seven trees.
- " 5 Excellent, brick, new, furnace, basement, one acre, excellent site, twelve trees.
- " 6 Excellent, brick, neat, clean, one acre, excellent site, fifteen trees.
- " 7 Excellent, brick, well furnished, neat, three-quarters of an acre, good site, sixteen trees.
- " 8 Good, frame, well furnished, one acre, not even, fifteen trees.
- " 9 Good, stone, well furnished and very neat, half an acre, rocky, twenty trees.
- " 10 Excellent, frame, stone basement, well painted, furnace, three-quarters of an acre, part hillside, thirty-five trees.
- " 11 Excellent, brick, fairly neat, one acre, superior site, fifty-one trees.
- " 12 Excellent, brick, very neat, one acre, exc. site and exc. closets, forty trees.
- " 13 Excellent, brick, very neat, half acre, exc. site and exc. closets, twenty-six trees.
- " 14 Good, brick, in good order and cheerful, one acre, uneven, closets poor, twelve trees.
- " 15 Inferior, stone, rough, small, three-quarters of an acre, uneven, rocky, no trees.
- " 16 Good, stone, fairly neat, half an acre, level, exc. closets, ten trees.
- " A.E. Excellent, brick, well painted, neat, etc., one acre, exc. site, twelve trees.

Nelson:

- S.S. 2 Good, brick, fairly neat, furniture fair, one acre, even, etc., excellent site, twenty-eight trees.
- " 3 Excellent, brick, very neat, tinted, one acre, excellent, 247 trees.
- " 4 Excellent, brick, very neat, painted walls, one acre, excellent, forty trees.
- " 5 Excellent, brick, very neat, one acre, excellent, twenty trees.
- " 6 Excellent, brick, very neat, wood ceiling, three-quarters of an acre, excellent, thirty-three trees.
- " 7 Good, concrete, well painted, not well arranged and seated, half an acre, excellent, ten trees.
- " 8 Good, concrete, neat, large, one acre, good to exc., closets only fair, eleven trees.

Nelson :

- S.S. 9 Excellent, stone, bright and cheerful, well arranged, one acre, level, thirty-five trees.
- " 10 Good, stone, neat and cheerful, well arranged, half an acre, partly hillside, twenty trees.
- " 11 Excellent, stone, fairly neat, large, one and a quarter acres, excellent and exc. closets, twenty-five trees.
- " 12 Excellent, brick, new, neat, well arranged, half an acre, level, good care, etc., twelve trees.
- " 13 Excellent, brick, neat, convenient, etc., half an acre, pleasant site, seven trees.
- " 14 Superior, brick, superior furnishings, painting, etc., one acre, superior site, etc., twenty trees.

Nassagaweya :

- S.S. 1 Good, frame, neatly painted, etc., not convenient shape, etc., one acre, good to exc., twenty-five trees
- " 2 Good, stone, neat room, one acre, exc. site, ten trees.
- " 3 Excellent, stone, well arranged, exc. furnishings, one acre, exc. site, sixteen trees.
- " 4 Good, stone, fairly neat, exc. furnishings, half an acre, exc. closets, twelve trees.
- " 5 Excellent, stone, very neat, exc. furnishings, one acre, level, etc., twelve trees.
- " 6 Excellent, stone, very neat, exc. furnishings, one acre, exc. site, poor closets, fifteen trees.
- " 7 Good, stone, not neat, poor furnishings, half an acre, rocky but smooth, fifteen trees.
- " 8 Inferior, frame, poor building, but neat, half an acre, hillside, nine trees.
- " 9 Good, stone, rather small and old, an acre, uneven, partly level, twenty-four trees.

COUNTY OF HASTINGS, NORTH.

W. Mackintosh, Esq., Inspector.

As a rule, our teachers have good health. Few, however, have been in the work long. The majority of them are young.

The majority of our schoolhouses are good. Few, however, have any structural appliances for ventilation. Those built during the past few years have, as a rule, been supplied with windows having no weights. As far as I can, I insist on this being done.

The greater number of the school-rooms are still furnished with desks and seats that are uncomfortable, the seat being flat. More than half of the rooms, however, have furniture fully "up to date." In the northern townships there are now but a few school-houses badly furnished. The intelligent interest manifested in this matter by not a few boards of trustees is worthy of commendation.

The rooms are, with rare exceptions, swept daily. As, in the greater number of cases, this has to be done by the pupils; dusting is not, as a rule, well looked after. In an increasing number of schools, however, the trustees employ some person to attend to this duty. Not a little of the uncleanness so apparent in connection with school-rooms is due to carelessness on the part of teachers.

The greater number of the school-rooms are washed twice a year. A few are washed more frequently. A number are seldom scrubbed. As a rule, trustees readily respond to suggestions from me about this matter. This desire to make the schoolhouses under their control comfortable is increasing in a very gratifying manner.

Before the summer vacation of 1896, there will, I hope, be very few school closets that are not screened. I have urged the trustees to give more attention to these matters. I hope the results of this urging will ere long be apparent.

Few, very few, of the boys' closets are supplied with urinals. This lack is the cause of much uncleanness.

In the matter of closets, a marked improvement has, during the last few years, been noticeable. Much remains, however, to be done in the way of reformation.

A plainly worded circular giving definite information and instructions on the subjects of school-room ventilation and cleanliness and the construction and care of closets, if issued from the Department to every school section, would do much good.

COUNTY OF HASTINGS, SOUTH.

John Johnston, Esq., Inspector.

The teachers on the whole are healthy. Though thirty-three teachers of the seventy-two are marked good, their health might have been marked excellent. Only two of the seventy-two teachers could be considered in inferior health. Although thirty-nine of the seventy-two school rooms have no structural or proper means of ventilation, the teachers have been instructed to lower the windows when necessary, to open doors and windows during recess, and to do all they can to have good fresh air in their rooms. By so doing, they are free from the diseases referred to under the head of "Reports on Teachers."

Under the head of "Report on Pupils," the scholars in our schools do not use spectacles more than they did ten or more years ago. Only three (3) cases of the use of spectacles are reported among 2,350 pupils in attendance at the time, and these cases were not caused by defects in the school-rooms, but by some natural cause. In a few cases, school rooms are overcrowded, but this is for only a short time in the year. Teachers generally are careful to see that their pupils sit properly in their seats and that they stand in proper position in the class, and in answering questions, and in reading. Some pupils are inclined to be rounded shouldered, but this is not always the fault of the school-room. Pupils in several sections have plenty of good healthful exercise in playing ball, and in other games usually practised in the country, and in walking to and from the school-house.

Schoolhouses.—Many of the rooms in our schools are swept by the scholars at noon, and some in the evening, and only a few of them are swept at night by some one engaged by the trustees and paid by them to keep them clean, and to build fires. A few of the schools are not as clean as they should be kept. On the whole, they are more clean than they were years ago, as teachers, from their training in Model and Normal schools, are imbued with the habits of neatness and cleanliness.

School Grounds.—Arbor Day has done much to improve the appearance and cleanliness of the school grounds, and by this, a taste has been developed for keeping the grounds clean and neat. A few of the old buildings have not good grounds, but, on the whole, the grounds are all that could be desired. By the questions asked, an inspector will be in a better position to induce trustees to get better seats and desks and to improve the grounds. A great many trees have been planted in South Hastings during the past few years, but, from want of proper care, and from the unfitness of the ground, many have

died, but, notwithstanding these drawbacks, a great many trees are growing and doing well, the number being 390. The teachers, trustees and scholars have been advised every year by circular and otherwise, to spend Arbor Day in improving and beautifying the grounds and in planting trees, and in making flower beds.

Schoolhouses.—There are a great many excellent and good schoolhouses, and yet there are a few that should be replaced by better ones. Several good schoolhouses have been built during the past years since 1871, but though well built and properly seated, there is no good means of ventilation. The windows are not on weights, and the only means of ventilation is by lowering or raising the windows and by opening the doors. Out of seventy-two rooms, sixty-three are excellent and good, and nine are inferior. Some of the last will be replaced by more suitable buildings in a few years. The trustees of these sections know that they must build very soon, but times are hard with farmers, and I have not compelled them to do at once what they have promised to do in a year or two. Since 1871, if trustees promised that they would fix up and build in a year or two, I was always satisfied, and have got as much done as in other counties without bringing down the dislike and ill-will of the trustees and ratepayers upon myself and the Education Department.

Outbuildings.—In many cases these are not in as good a condition as they should be, and it is a difficult matter to remedy this in some cases, as many of the teachers are females and will not look after the closets as they should, and you cannot always find the trustees. All the schoolhouses have separate closets, but they are not all screened from view, thirty-one of the sixty-five not fulfilling this condition, but this question being asked in the sanitary report, will enable an inspector to enforce this essential, and to induce trustees to keep the outbuildings in a cleaner condition. Sixteen (16) of the seventy-two rooms are not as well seated as the law requires or as they should be, but the trustees have promised that they will provide such seats and desks as are recommended. Some will do this this year. The questions asked in the sanitary report will enable inspectors to improve the matters complained of.

COUNTY OF HURON, EAST.

David Robb, Esq., Inspector.

Teachers.—All teachers except three enjoy good health. It would, indeed, be very difficult, if not impossible, to find eighty-nine individuals engaged in any business or calling in possession of better health than the teachers of this inspectorate. One teacher is, however, suffering from phthisis, but this cannot be attributed to the school-room, it being the sequel of an attack of pneumonia contracted while supplementing his income by working in the harvest fields. Only one case of sickness, and that but of three days' duration, is reported as being caused by the unsanitary condition of the school-room. The average time lost per teacher was two and three-quarter days, but this was mainly caused by three cases of typhoid fever and three of pneumonia contracted during vacations. But one teacher complained of nervous trouble. Only thirty-seven teachers reported as having any fixed rules for physical exercise, but nearly every teacher does a good deal of walking or takes exercise on the playgrounds with the pupils. Many teachers, both male and female, have bicycles, and it is needless to add that any person having a bicycle does not usually suffer for lack of exercise.

Very few are myopic, and these charge it to excessive reading while attending the High School. While a good deal yet remains to be done in the way of sanitation, yet but few schools are really unhealthy, and the rooms of all are usually well supplied with pure air during the daily intermissions.

Pupils.—There are only ten children attending school who wear spectacles. Nor do I think that myopia is increasing; nor can it be charged to the defective lighting of the school-rooms. Excessive reading at home with poor light may possibly cause some of it, and some may be hereditary.

In examining into the life history of children who appeared weakly, I found that in many cases they enjoyed excellent health. I met with only sixteen children who appeared to be not in robust health during the half year's inspection. There is very little overcrowding and very little lack of ventilation in the rural schools. Association with other children of the same age in the school-room, and taking an active part in the play on the schoolhouse green, have been the making of many weak, petted and pampered children. No looker-on at a game of baseball or football on the school ground but will admit that the qualities of self reliance and self-defence are being cultivated in the best way possible. Indeed, I believe that the average rate of mortality among school children is less than that of children of the same age who do not attend school. Football and baseball are the principal games indulged in by the boys, and, when the weather is fair and the attendance small, the girls frequently join the boys in playing baseball. The boys treat the girls with great consideration when playing with them in any school game. The girls amuse themselves with plays and games such as have been known to children centuries ago. Indeed, I do not notice the slightest change in the plays indulged in by girls during the past thirty years. Only eighteen football clubs are reported as being properly organized, but the schools in the inspectorate, except two, have football clubs of some sort. It is the best game extant for a school playground.

Fifty children are reported as suffering from headaches—mostly nervous.

Most teachers report that they can notice no difference as to the forenoon or afternoon management of the pupils under their charge. A few, however, think their pupils are more easily managed in the forenoon, but they are all of the opinion that children are most easily managed during the time in which they are being taught mathematics or engaged in mathematical exercises. Of those reported as being indifferent to games and plays only four or five are in a weakly state of health. A few are strangers, and a few are sometimes not on "playing terms" with the rest of the scholars. Girls take abundant exercise during the summer months, but in winter the larger girls usually remain in the school-room during intermission, and usually pass the time reading or in reviewing some school exercise which was of more than ordinary difficulty. Up to twelve years of age girls take nearly as much exercise as boys; after that age they are much less active. About seventy-one per cent. of the pupils bring luncheon to school, which means that about three-fourths of the pupils live a considerable distance from the schoolhouse, many a couple of miles, some even more. This walk is of itself, in stormy weather, even too much exercise.

Schoolhouses.—Of the eighty schoolhouses in this inspectorate, forty-three have each a person paid to sweep and dust them. The sweeping is done after four o'clock in the afternoon, and the dusting in the morning. The average pay for this service is \$16.50 per annum. Many trustees allow a certain sum each year for the purpose of sweeping and lighting fires, and the teachers mostly do the work themselves, but seldom satisfactorily. In about thirty schools the pupils sweep and dust at noon. Sweeping and dusting cause more friction in a section than the service is worth, ten times over. There are thirty-seven schoolhouses wainscotted or boarded, and forty-three with plastered walls. Of the latter, twenty-six were not whitewashed during the year. All but ten were scrubbed one or more times. Many are scrubbed and receive a general cleaning on Arbor Day by the pupils and teacher. Six are reported as being swept bi-weekly or tri-weekly. Five of these are swept by the teachers.

Ventilation.—Of the whole number of schoolhouses, fifty-two are reported as without satisfactory structural ventilation. All these have structural ventilation of some sort, but five or six; but of course it is quite insufficient. The usual mode of ventilation in these buildings is a couple of trap doors in the ceiling, raised and lowered by a cord. It is better than no ventilation, and that is all that can be said in favor of it. Nearly all are supplied with suitable blinds, but in a few cases they were out of order when the schools were visited. Only twenty-five have the windows balanced by weights.

Of the school buildings, nineteen are excellent, fifty-two are good comfortable houses, seven are inferior, and two are very bad. These two, however, will be replaced by new buildings next year. All but two have either a porch or ante-room; many have both.

School Grounds.—The closets were all in a very satisfactory condition, except a few. In seventy-two school lots the closets are separate buildings, and a proper distance apart. In eight sections the two divisions of the closet are under one roof, but are divided by close partitions, and the approaches separated by light board fences. When visiting a school I invariably and closely examine the closets, and if they are not entirely satisfactory, I promptly call the attention of the teacher and trustees to them. The floors, seats and walls of the closets used by girls are scrupulously clean, and with a single exception the walls are free from objectionable words. Nine closets are screened, but many are so situated as to require no screening. Two schools have walks where required. Many have walks from the road to the schoolhouse door, but have none to the outbuildings. Nearly every schoolhouse has a well on the school lot; four, owing to situation, have wells on the roadside at a convenient distance, enclosed by sheds or fences. The sanitary position of many schools is all that could be desired. Those reported "good" require only a little drainage to make them rank as excellent. Looked at from a sanitary point of view, three are in a poor location; but when the adjoining lands are drained, these also will be quite satisfactory.

The selection of a school site is mostly determined by the desire to have it as near the centre of the section as possible, and at the junction of roads, or still better, "cross roads." The average size of the school sites is half an acre, or exactly .5125 acres.

58 schools have sites of $\frac{1}{2}$ acre each.				
16	"	"	$\frac{1}{2}$	"
1	"	"	$\frac{3}{4}$	"
4	"	"	$\frac{3}{8}$	"
1	"	"	$\frac{1}{4}$	"

The school grounds of twenty-three sections are excellent; forty-one are good; sixteen inferior.

All school sites having an excellent sanitary situation, well drained, perfectly level, planted with sufficient shade trees, proper outbuildings and good fences, have been classed as excellent. Those classed as good are not quite up to the standard of excellent sites.

During the first half of the year the wells are nearly all quite satisfactory, but after the summer vacation, owing to their disuse during that time, the water is usually unfit for use. This accounts for the unfavorable report in reference to fifteen wells. But were they pumped dry a short time before the beginning of the autumn school term, no fault whatever could be found with them.

Recommendations.—When the school regulations are revised, the following changes should be embodied in them:

1. All rural school lots must be surrounded by proper fences, provided with suitable gates, drained, levelled, and planted with a sufficient number of shade trees.
2. All new rural schoolhouses must have sufficient and effective structural ventilation, and be heated with hot air.
3. The basement, in addition to the apartment for the furnace, should contain a separate room for the smaller children to play in during wet, cold, or stormy weather.
4. The trustees must secure the services of a suitable person to sweep and dust the school-room daily, light fires in the morning, scrub the floors and clean the whole interior of the building twice a year, once during the summer vacation, and again at the Christmas holidays.
5. The wells should be cleaned out during the summer vacation; provided with a good and a close platform.

Suggestions.—The Education Department should prepare plans of outbuildings on separate sheets of paper and supply them to inspectors for distribution among trustees.

COUNTY OF HURON, WEST.

J. E. Tom, Esq., Inspector.

Teachers.—There are ninety-three rural sections in West Huron. This year there are fifty-seven male teachers and fifty-two female teachers in these schools. I believe these teachers enjoy as good general health as an equal number of persons engaged in any other work. They may not present so robust an appearance, yet their general health is fully up to the average. I consider only one as being in inferior health. In some years the number would have been as high as six. During my ten years of office five teachers have died of phthisis. Some of these had contracted the disease before beginning to teach, but the fatal result was hastened by teaching. Bronchitis is above the average among teachers. The dry atmosphere of the school-room, and the dust in the air, caused by the chalk and the inferior sweeping, dusting and scrubbing, act injuriously on the throat and vocal organs. There should be a basin of water kept on every stove.

The sweeping should be done after four o'clock p.m., and the dusting should be done well and in the morning. The schoolhouse should be scrubbed at least four times in the year.

I have not found nervous diseases more common among teachers than among other persons.

I do not think myopia is peculiar to teachers as a result of their school duties. Four of the 109 teachers wear glasses. Each of these wore spectacles while engaged in the non-professional work. Badly printed books and inferior lamp-light while studying, makes it necessary for many of our high school students to use spectacles.

The majority of teachers get a good deal of out-door exercise each day. They have a walk of some distance. Many of them, both male and female, have bicycles. These are sure to get sufficient exercise during the summer months.

Pupils.—The great majority of pupils in our rural schools enjoy good health. The walk to and from school, together with the "chores" at home, help to provide exercise for them. Of the 3,654 pupils present when I made my visits, only thirty-nine have been considered by the teacher and myself as being in feeble health.

Spectacles were worn by only twelve pupils, yet probably three times as many have defective eye-sight. Pupils below the age of eleven or twelve years very seldom wear glasses, even when their sight is defective.

The increase in the amount of blackboard exercises has had an injurious effect on the sight of the pupils. Pupils seated twenty-five or thirty feet from the blackboard are forced to decipher small and poorly written exercises. If the boards were a distinct green instead of black, the injury would be very much less. I should like to have all the boards of slate or painted green. In the majority of schools there is sufficient light. All are not provided with suitable blinds. Teachers do not give proper attention to the position of the pupils' books while they are using them.

During the last ten years a few pupils have shown signs of spinal curvature, which the doctors have ascribed to sitting at unsuitable desks. The desks are not always inferior, but are not suited to the size of the pupils.

Only six rooms are reported as having insufficient air space for the number of pupils in attendance. Most of the rooms are supplied with sufficient fresh air. The main difficulty is the manner of obtaining it. The pure air is too often obtained by raising the lower sashes of the windows, and sometimes two opposite windows. Pupils are thus compelled to sit in a "draught," which is very hurtful.

Football and baseball are the common games among the boys. They also have a number of running games. The girls usually play ball during the summer. The pupils enter heartily into their games, and enjoy those especially in which there is a contest. Some of the teachers do not take any interest in the school games.

Schoolhouses. — There are ninety-four rural schoolhouses. In grading them I have taken into account the durability, comfort, space, seating, heating, and general state of repair. Those graded No. I. are in good condition in every respect, well lighted and furnished with excellent desks, which are graded to suit the sizes of the pupils.

I believe the school which is heated by a stove, properly enclosed, is just as comfortable and can be heated at a much lower cost than the one which is heated by a furnace.

Nearly all the schoolhouses built during the last eight or nine years have the walls and ceiling finished in hardwood. I find a good deal of difficulty with the sweeping. In about twenty per cent. of the schools the sweeping is done by the children, and usually at noon. In some cases the teacher agrees at the time of engagement to see that the sweeping is done. Some of the female teachers do this work themselves, and keep the school very neat and clean. Where the teacher gets the children to do the work, I find the most untidy schools.

In seventy-one sections the trustees make a definite arrangement for the sweeping or scrubbing, or for both. The average sum paid in these sections is \$15 per annum. In twenty-two sections no provision is made by the trustees.

Sufficient attention is not given to the cleanliness of the schoolhouses. The teachers can do a great deal towards having the school-rooms well taken care of if they will use their influence for that purpose. I believe the seeds of disease are frequently transmitted through the dust of the school-rooms. The inspector should have some means of forcing the school authorities to keep the schoolhouse and the water-closets in a sanitary state.

School Grounds.—The observance of Arbor Day has done much to improve the appearance of the school grounds. In the majority of sections the teacher and pupils spend this day in planting trees, making flower beds and cleaning up the yard. When the teacher is interested in the school premises, they are kept in good condition. Most of the fences are substantial and in good condition. In a few sections barbed wire fences have been made. These fences are dangerous, and should not be permitted around any school yard.

A large number of the grounds are well planted with trees. If these are taken care of for a few years more, they will present a very fine appearance. The teachers have been mainly instrumental in having so many trees planted. If the teacher is careless, the pupils and trustees will not look after these things, but if he is interested in them, the pupils and the trustees will be.

The average size of the school grounds is three-fifths of an acre. There are fourteen which contain an acre or more, and three with less than half an acre.

The closets are improving every year. There are many good closets which are well kept. The closets are often too small, and also poorly constructed. If the snow gets into them they can not be kept clean. The boys' closet should always be provided with a urinal trough. I find it very difficult to get this put in. The girls' closets are kept clean and free from obscene scribbling. In too many cases the boys' closets are in a state which is injurious to the health and morals of the pupils.

I believe the Education Department should have a circular prepared dealing with the construction and care of the closets. The inspectors should be supplied with these so that one could be sent to trustees when asking them to build new closets. I have for some time made a plan and sent it to the trustees who were about to build new closets. A printed circular from the Department would have much more influence.

In grading the school grounds I have placed in grade I. those which are dry, level, planted with shade trees, well-fenced, and provided with a woodshed and suitable closets in good repair. In grade III. are those that are unfit for a play-ground, or such as have very poor fences and outbuildings.

COUNTY OF KENT, EAST.

W. H. G. Colles, Esq., Inspector.

1, 2. The number of male teachers is twenty-nine and that of female teachers thirty-four. Of the forty-four reported as in excellent health twenty-two are males and twenty-two females; seven males and ten females are in good health and but one of each class in feeble health. The sex of the teacher, therefore, appears to have no bearing upon the question of the teacher's health.

3. The *average* age of the teachers does not appear to afford any definite information. Two teachers having an average age of thirty-five would appear to be in a vigorous time of life, whereas one might be eighteen and the other fifty-two years. As a matter of fact, while the average age of our teachers is twenty-six, I find that three are below twenty years of age; forty-seven are between twenty and thirty years; eleven between thirty and fifty and two over fifty years.

4. The same may be said as to the *average* experience, while the summary report shows a healthy five or six years average experience, this average is the result, in the case of sixty-three teachers, of putting together the very ripe experience of two who have taught over thirty years each and the inexperience of twenty-four who have taught less than two full years and averaging the result with the healthy experience of about thirty-seven others who have taught between two and thirty years.

Experience below two years.....	24 teachers
“ between two and ten years	30 “
“ between ten and thirty years	7 “
“ over thirty years.....	2 “

5, 6. Of the eighty-seven days lost by sickness during the year, by sixty teachers, an *average* of one and half days each, nearly half that time (thirty-eight days) is chargeable to one man, who for years has been afflicted with rheumatism, and as he has been engaged for twelve years in the same school, a fairly sanitary one, we must not let his loss of time throw an unfair suspicion upon the sanitary condition of the schools in the riding.

7. While almost all our teachers take regular exercise, it is generally *incidental*. Many board in houses remote from their schools, many ride bicycles to and from their own homes, and many engage in outdoor sports with the children. I do not find any who have *fixed rules* for exercise or who take regular exercise for its own sake. The excellent health of our teachers notwithstanding, is the result of healthy parentage and hygienic habits and surroundings,

11. The limited size of some of our schoolhouses is an unfortunate fact, since, in most instances, the buildings are otherwise good and will not be rebuilt. Only fourteen are too small for the average daily attendance and a few of these will be replaced by better ones. As our school population and average attendance are, and as they have been during the past five years, the accommodation in this respect is fairly liberal, on the whole, but I think that before ten years the average attendance will have largely increased and we shall be obliged to ask for more generous dimensions or for effective ventilation.

12. Seventeen of our fifty-seven school-houses have neither porch nor ante-room, but as these are among the schools indicted for having ‘no structural ventilation’ it is better that they have no porches or ante-rooms, for where the entrance is not so sheltered, the ventilation by this means, especially at recess, is much more free and effectual, and this is, perhaps, an unsuspected source of the present excellent health of our pupils and teachers.

14, 16. In thirty-two of our fifty-seven schools the whitewashing has been neglected. In some of these thirty-two schools the ceilings and walls are boarded with narrow, matched lumber and painted, a very permanent and economical plan, but even in such buildings a thorough washing with hot soapsuds should be done every midsummer.

I would suggest that the annual cleaning of the walls and ceiling of every school room be made a fixed duty of every board of trustees, and that the issuing of the inspector's order for the Legislative grant be made subsequent to a notice from the board that these and other such duties have been performed. There would then be no withholding of the grant in individual cases to cause resentment and soreness, but everyone could have his order as soon as he sent in his annual certificate that this (oft neglected) work was done. The annual wash should be extended to the desks and woodwork of doors and windows, and the floors should then get their fourth quarterly scrubbing, and closets be put in good order.

A blank form of trustees' notice to the inspector with application for Legislative grant could be sent by inspectors' to trustees say about July 1st, and when these are returned, severally, the order in each case could be sent by inspector. By such means we could accomplish universally and without friction what is now too often neglected, or accomplished with much persuasion after aggravating and dangerous delays.

17. Our school-rooms are fairly well furnished. In not more than half a dozen schools can the seats be said to be inferior in form and construction. Wooden benches and carpenter-made desks have been made to do duty as kindling wood. The chief defect is in lack of grading. In all the schools refurnished of late, the desks are of modern construction and graded in size. I am hopeful that within a few years every school will be equipped with the most approved style of furniture.

18, 19. In thirty-two of our school-houses the windows are upon weights, but in the older ones, twenty-five in all, no such provision has been made nor is likely to be made. I find much trouble in the matter of window blinds. These are always short-lived. Frequently poor in quality, when the windows are lowered from the top, the wind takes rude liberties with them, making them look very much the worse after one season's use. Blinds are very easily torn or pulled down by the children in their play, and trustees soon grow impatient of refurnishing in this direction. The consequence is that too many of our schools are poorly furnished with blinds. Sometimes trustees deem it an extravagance to put blinds on windows with a northern aspect, because the sun does not shine in there, so that some schools are fitted with blinds on one side only.

20. Except in schools built within the last decade the "structural ventilation" is so defective as to be very little better than none at all, and in a few instances it is positively worse than none. In one school, for instance, a row of holes all along the front of the teacher's platform admits a sheet of cold air from outside. This in its passage along the floor to the furnace at the opposite end of the room mows like a scythe the limbs and feet of the unfortunate children writhing at their desks, at the foot of each of which there is likewise a cold air duct through which the savage gusts of icy "ventilation" rush in to supply the little dears with "fresh air" of the same thermometrical quality as that which killed Lieutenant Peary's dog teams in high latitudes. The genial "furnace" is encased with a zinc jacket which inexorably precludes any possibility of the little ones warming their agonized great toes, or even thawing their frozen shoes after a two-mile tramp on a winter morning, unless they could get on top of the furnace some six feet up, where the generous streams of hot air rush through in a vertical course to the ceiling, and which, I suspect, they sometimes do. The hot air rushed up by this cast-iron volcano floats along the ceiling, filling the upper and empty half of the room until it strikes the opposite wall, where, having no means of exit, it is turned downward on the teacher's head, forcing her to retreat with a splitting headache, and causing her to seek relief by opening the windows at the top, which while it tends to cool the children's heads at the risk of giving them severe colds, furnishes no relief whatever to their frost pinched feet on the floor. And yet this is a school with "structural ventilation." Another system of structural ventilation consists of a row of "ventilators" in the ceiling, directly over the line of stove pipe, through which the heated air rushes directly upward without ever looking down at the little folk far below, and making room for the inrush of the cold winter breath of the school yard through the fresh air registers placed at intervals along the walls on a level with the children's feet. Thus between *ineffectual ventilation* upon

which some one stumbled by making holes in the ceiling, the walls and the floor, and *no ventilation* at all, on which at least no one prided himself, I must say that some of our schools are open to criticism.

Unfortunately it is not always possible to make trustees understand that there is a difference in gravity between hot air and cold air, or that either has any gravity at all. Some there are too who do not admit that vitiated air is unwholesome. A public school inspector should be competent to direct the construction of a ventilating system in any school and it should be imperative upon trustees to submit for his approval the plan on which they intend to build.

The stoves and pipes in all our schools are in good condition, and, largely owing to Arbor Day efforts, they are almost all creditably clean.

22, 23. Our figures show our school-houses to be graded as follows: Thirty as grade I. twenty one as grade II, and six as grade III. In thus classifying I have compared the buildings with one another, having in view also what I think a schoolhouse should be. I fancy, however, that among those classed as grade I will be found as fine rural school buildings as any in the province. These are modern and graceful in style, of white brick, having a good heating and ventilating system, well lighted, commodious and furnished with suitable porches and ante-rooms. In one only, a two-room school, the Smead & Dowd system of heating and ventilating is employed, and it is giving very good satisfaction.

25, 26. The numbers of pupils present during my visits throughout the term were: Approximately, 835 boys and 945 girls, whereas our registers for 1894 showed 1,832 boys and 1,863 girls enrolled in our schools. The difference—2,115 pupils must be accounted for by the fact that at this season of the year the larger pupils are engaged at work upon the farms, infringing not a little upon the provisions of the Truancy Act, which is largely inoperative because the appointment of the truant officers, on whom the working of the system depends, is left optional or permissive instead of being made imperative.

27, 30. All the spectacles used in the schools in East Kent would not be more than enough to supply all the members of one old-fashioned family such as they used to have up in Grey County—fourteen pair in all. And yet I do not consider this a conclusive proof of the absence of defective vision. There are many who *should* wear glasses, but who fear being ridiculed, and whose parents are unaware of the defect or of the advantages of artificial aids. It would hardly be possible to get, even approximately, the number who require glasses, without close personal observation for this purpose and careful enquiry extensively made. The number might reach from seventy-five to one hundred, or three per cent. of our pupils.

I believe that cases of defective hearing are very rare among us: Only five are reported in all. True, the youngsters sometimes fail to hear the assembly bell, but even a very low hint to go for recess can be heard by every little ear within the walls.

My investigation shows likewise an absence of weakly pupils: All are not equally robust, but the more slender in form and the less florid appear to enjoy quite as good health as the others. I think the absence of headache and other signs of good health are due in some measure to the somewhat small attendance generally in the schools, to the frequent airing of the rooms and to the wise laws which limit the school terms to the most suitable seasons of the year, and to the better systems of teaching, which relieve the pupils of a great deal of close study of books.

31. Almost without exception our pupils take keen enjoyment on the play grounds during recess, and in no case did I find any who decidedly desired to be excused from it.

Nearly all the children in rural schools lunch in or at the schoolhouse. Even those who reside near by prefer to remain, at the noon recess, so that they may join in the school games. I observe that the pupils do not wait until the noon recess for lunch, but draw upon the lunch basket during the intermission as well. Yet they are evidently thriving on this oft recurring system of refreshments. The healthiest children I ever saw

were those of a good Scotch dame, who in reply to a question as to how many meals they had daily, replied that they had but "One diet a day, and that is frae morn till nicht." No, no, our many cold lunches do not appear to have any undesirable effect whatever.

33. There are practically no organized sporting clubs in East Kent Public Schools. The proximity of our rural schools to the Chatham and Ridgetown Collegiate Institutes robs us of our boys and girls at 12 or 14 years of age, and below that age they are too young to organize for manly sports.

During this year we have been singularly free from epidemics. A few individual cases of measles and diphtheria have been known, but there has been no general outbreak in any school.

35. Our school sites, considering that our country is somewhat flat, are generally well chosen and suitable. Generally the best available lot has been procured, though in a few instances a trifling difference in price has led to a decision in favor of a lot in an inferior location. As there are practically no sites to be chosen in East Kent it makes little difference to this inspectorate, but the Public School Inspector should have some control over so important a matter.

Our grounds are now generally well supplied with shade trees: In our fifty-seven school lots we have 1,125 trees, an average of twenty to each lot. These are not always arranged to the best advantage: A few should be situated on the south side of each school house, near enough to shade the building from the summer sun. The trees should not be arranged along the fences on both sides, opposite to the school, as they would thus intercept the grateful breezes in hot weather. The maple and the Norway spruce are, I regret to say, the only kinds planted. I would much prefer to see a variety of native forest trees preserved in the school grounds: The drooping elm, the birch, the beech, the tamarack, the hemlock and the thornapple trees could and ought, with many others, to be thus preserved, even if it were necessary to set aside an additional acre of ground for this purpose. A public grant from the Legislature could not be better expended than for this purpose, and the legislator who shall bring this about will deserve the eternal gratitude of this country, and will immortalize his name by making our school properties, by this feature, superior to those of any other land.

In ornamentation and tastefulness our school grounds are not yet by any means perfect. Flower beds are few: where once we managed to have them kept, they are now too often being abandoned. This is owing to the want of proper gates to keep out the active and eager shearling and the mean, persistent school section hog. In some instances gates have been purposely opened or boards kicked off the fences by friends of these free commoners. Trustees too will not quarrel with their neighbors in defence of a school flower bed, and the result is that the teachers and pupils become discouraged at seeing the result of their labor thus destroyed.

Our school fences and gates are not such as I would like: Every lot is well fenced, but it is invariably the *farm fence*. Trustees are unwilling to risk the charge of extravagance by putting up a more costly fence than that on the farms near by. Such a distribution of the present legislative grant as would encourage the building of a tasteful fence, of a pattern approved by the inspector, would effect changes that would be a decided advantage to the rising generation, and influence largely the appearance of many a future Canadian home. Some effectual action in this direction should be taken.

43. In some parts of this county water cannot easily be found, and on some (one third) of our school grounds we have not a proper supply, although the trustees have in some instances drilled deep wells in various parts of the lots. Generally, where good water is to be had, we are well supplied. *Digging* wells for school use is a poor plan. In such wells the water becomes foul or unwholesome from standing too long, and it is hard to keep such wells free from pollution by mice and toads being drowned in them. An iron pipe in an artesian well is the best kind of well for schools. Water from the schoolhouse roof 'filtered' (?) into a reservoir should not be permitted to be supplied to the children. In some of our lots we have good "flowing" wells—a two-inch pipe driven about 100 feet down, from which the pure water flows in a continuous stream.

44. In every instance we have separate closets, and these, with but two exceptions, are under separate roofs, and a reasonable distance apart.

With but one exception the approaches are screened with board fences. A much more graceful method however would be to plant three or four Norway spruce trees in front of each. These would soon form a pleasing object of scenery, and would need none of the repairs too often long required by the board fence contrivance. These trees would form a pleasant and permanent ornament, and while flower beds with changing teachers and scarcity of sheep pasture might come and go, these would still go on for ever

There is a tendency to *economize* in building school closets and they are therefore frequently out of repair: Cheap latches and hinges lead to open doors, and these again admit snow drifts in winter and rainstorms in summer, and then inevitably the floors become polluted, and those who would cannot be cleanly.

Exposed as these buildings are to the visits of irresponsible lads out of schoolhouses, it is impossible without good locks and careful attention, to keep them free from objectionable cuttings and pencillings. We may do much by teaching the children better principles—to abhor evil and to love the good and the pure, but so long as the average, not to say the worst, school closets of our Province remain as they are, a strong counter influence exists, paralyzing to some extent the good seed sown, and silently suggesting evil which may escape the vigilance of the teachers. There are few plank or gravel approaches to the closets in this county. People in rural sections provide their children with strong shoes in bad weather and they do not see the philosophy of being allowed to walk upon two rods of plank after walking two miles in the mud. Plank walks across a school yard, too, form impediments to running and playing ball. Our soil also in many parts is porous and the ground is consequently dry and clean under foot.

47. We have not more than a dozen woodsheds in the whole inspectorate. Our yeomanry prefer to let the rugged oak and maple bolts bid sturdy defiance to the elements, rather than invoke their clemency with planed and painted deals, and they can challenge us to debate as to whether the firewood blocks in their rustic coats cannot outface the universe at as small a cost as can the most durable structure that our arts and ingenuities can devise for their protection.

48. Our school grounds vary in size from half an acre to an acre: The average size is about five-eighths of an acre. I observe that the smaller grounds are usually in better condition, the larger being more prolific of weeds, whose tendency is to grow most rapidly when people are most busily engaged, so that these unwelcome tenants of the school ground are apt to be neglected.

Our schools do not require as large play grounds as formerly: The attendance is smaller than in years gone by. People are marrying later in life. The average number of children in a family is from two to four, whereas it used to be from four to ten. Another cause of decreasing attendance is the prevalent fashion of residing in the nearest town or village, leaving the farm house unoccupied and the rural school attendance proportionally smaller.

COUNTY OF KENT, WEST.

Robert Park, Esq., Inspector.

In doing so I must first congratulate the Minister of Education upon taking up this very important matter, for, should nothing come from the investigation of it but the enquiry itself, much good will result. I have endeavored to make the enquiry as educative as was possible to teachers, trustees, and particularly so to pupils. To that end I made known the nature of the report in every school, and explained, as far as was possible, the aims and objects the Minister of Education had in view in examining into the matters touched upon and did my best to stir up an interest in behalf of improvement, that I hope the pupils may carry into every home, as well as take to heart themselves.

Teachers.—It will be seen by looking at the statistical report that the average age of the sixty-eight rural teachers employed in the schools of West Kent is but twenty-six and one-quarter years, and that the average experience is but five and three-quarter years. If eight of the older teachers be taken away from the sixty-eight, the average age would be reduced to less than twenty-three years, and the average experience to four years, and this average is based upon the close of this year rather than upon the time when it was taken. Of the sixty-eight teachers, sixteen have taught under *one* year, twenty-eight under *two* years, and thirty-four, or half, under *three* years. Of the sixty-eight teachers, fifty-two seem to have excellent health, fifteen good, and but one poor. It is doubtful if in any other occupation you could find a larger percentage of good health than this, yet, as I have observed closely myself, have made enquiry of the teacher, as well as of others concerning him, I believe it to be absolutely correct. There is no teacher in my division, but one, that has any symptom of consumption, and it is doubtful if even he has it, as of late years he is much stronger and more vigorous than formerly.

But again, if one takes the average age and experience into account, he sees that those who are engaged in the teachers' work have mostly been in it but a short time, and hence he may easily come to the conclusion that consumption and other diseases that are thought to be incidental to the profession have not had time to do more than sow their baneful seeds, to have effect later when their subject has abandoned the profession for some other. But here again I am met by the fact that of the eight mentioned already, who are oldest, and who have been longest in the profession, six have excellent, two have good, and none have poor health.

Notwithstanding that fifty-one out of the sixty-five schoolbuildings in the rural district of West Kent have no structural provision for ventilation, and the further fact that many of them are overcrowded, I am forced to the conclusion that teachers as a rule are as healthy as persons in any other occupation. I think also that this is more fully the case to-day than at any time in the past, and I attribute this fair degree of good health under adverse circumstances to two causes:—(1) The teacher understands more of the laws of health than formerly, and takes greater pains to use even the miserable means at his command to purify the air of the school-room. One can scarcely go into a room now where the teacher is not intelligent enough to try to effect a change of air both at recess and at noon. The pupils are induced to go out to play, the teacher commonly going with them, while the windows and doors are thrown open to admit a fresh supply of oxygen. (2) The teacher's work, through improved methods of doing it, brought about by the training of the Model and Normal schools, is much less wearing upon him than it once was. It is true he spends more time after school in devising the means for carrying out his next day's work than he once did, but once his work is devised, everything moves with the precision of machinery, pupils are kept interested and busy, there are no difficulties in matters of discipline for him to fret over, everything is going well, and after a day's work in which he sees his pupils have made progress, each trying to outdo the other in industry, he goes home, not with a load of care, but with pleasure, to prepare for the work of the morrow.

The one teacher in my division who complained of ill-health has abandoned the profession of teaching for that of medicine. His school-room was far below the cubic requirements, yet with an attendance of about seventy children he scarcely ever opened the windows and doors, and of the 111 pupils who complained of headache in the sixty-five schools, twenty-two, or one-fifth of them, belonged to that school. The conclusion that I must come to, therefore, is that though many of the school-rooms are inferior to what they should be in point of ventilation, if the teacher makes use of what he is now compelled to know of hygienic laws, neither he nor his pupils need suffer much from ill-health engendered by bad ventilation.

Pupils.—There were present in the sixty-eight divisions of rural schools visited, 2,096 pupils, or an average of thirty-one in each division. The busy season, when child labor can be utilized on the farm, is the cause for the comparatively low average, the Truancy Law seeming to have no effect in the rural districts. Of the 2,096 pupils, I found but three actually wearing spectacles, and two others who had need of them, that

is one pupil in every 420 has necessity for glasses. This does not show that "myopia is dreadfully on the increase." I also found but twelve who are defective in hearing, or one in every 175. The number apparently weak, thirty-five, is also comparatively small, and the number who are indifferent to play is so small that unless they are imported this county will have a dearth of "moping misanthropes" in the generation to come. In the sixty-eight school divisions there have been twenty cases of contagious disease, but in nearly every case there were but one or two afflicted, and no fatality that I could hear of. Through the training received in the model schools the teacher understands the danger to the community from the spread of contagious disease, knows his duty in the premises, and makes use of his powers to prevent its dissemination. There seems then to be little danger now of the school becoming the agent for the spread of contagion.

I am sorry to report that there are but eight sporting clubs in the sixty-five rural schools of West Kent. While gathering the matter for this report I have done my best to interest both teachers and pupils in this very important matter. I have called attention to the value of play as recreation, and as a means of developing muscular power, but I have been still more particular to call attention to its value as a means of developing true manliness. I have also called attention to the fact that boys will learn to manage business affairs of after life in a business way in the organization and management of a good sporting club. From the interest shown by teachers and pupils in what I had to say I feel certain that much good will result.

Schoolhouses.—While we have in West Kent a few of the finest rural school buildings in the province, I regret to have to say that there are yet in this division one-third of the buildings below the cubic requirements. There are thirty-two without a porch, and sixteen without either porch or ante-room. If it were not that the teachers in these schools were very careful in training their pupils in habits of neatness, these schools would present a very untidy appearance, and the floors might be littered with matter that would be conducive to ill-health. I think it would be right and proper, and eminently in the interest of all concerned, if the Minister would make it compulsory for every school building to have a porch or ante-room, before participating in the school grant. I have asked for it in every case, and so far have had no result from my request. Notwithstanding this want of what is absolutely necessary, I found but one room out of sixty eight that showed any sign of untidiness at my last inspectorial visit, and there the room had not been swept the day before as required by law. I have called the attention of that Board to the defect and I hope that it will at once be remedied by a daily service.

All the schools but four have regularly appointed janitors at an average salary of about \$25 per annum, and the remaining four are taken care of by the teacher. I hope to have these teachers leave this work to the janitors entirely, though I believe, that, in three or four cases, the teacher undertook the care of the school because the janitor's work had been unsatisfactory.

Most of the boards provide for having the school-room scrubbed at least twice a year, many of them four times, and a few arrange with the janitor to do it monthly. The were but two not scrubbed in 1895, and these were scrubbed in December, 1894. Half of the schools, thirty-four, have been whitewashed since January, 1895. Many of the remaining half are ceiled with wood, and walls and ceilings are painted, not only of these, but of several of the better schools, where the walls and ceiling are of plaster. Some eight or ten have been thus treated this year. In two of the schools the crudest kind of wooden seats are still in use, and in eight others they are old-fashioned and uncomfortable.

It is to be regretted that some boards seem to think that blinds are a superfluous luxury. I have insisted upon these being procured where necessary, and in most of the eighteen cases reported defective the fault lies with the care given to the blinds after they are procured. Two or three tacks come out, the blind falls and is put in a corner for repairs, which it never receives, when two minutes' work upon the part of the teacher or an older pupil would put all^s to rights again. I have pointed this with similar matters out to pupils and teachers, and hope to see these things receive better care.

Thirty-seven, or more than half the schools, have windows without weights, but about two-thirds of these are supplied with catches for holding the sash when lowered or raised. There are no less than fifty-one out of sixty-eight rooms without adequate means for ventilation. Some of these buildings are almost new, and yet no care has been taken to draw the foul air from the rooms by means of a ventilating shaft connected with the chimney. Of course many of these rooms have means for allowing cold air to come into them, but make no provision for vitiated air to get out.

Of the six stoves reported in poor condition, all but two were merely dirty, and I have no doubt new stoves have been procured instead of the two which were defective.

School Grounds.—The largest school grounds in the division contains one acre, the smallest one-half acre, and the average is ten-thirteenths of an acre. In two of the townships nearly every ground is one-half acre, in the other three nearly every ground is one acre. There are four schools, under the control of two school boards, where the grounds are unfenced, notwithstanding my appeals that the law should be carried out. The boards are of the opinion that the school property assumes a city air when it has no fence. What I have said with reference to school porches would apply with equal force to the case of unfenced grounds, for I find that carelessness with reference to fences leads to carelessness about improving the grounds, and about the condition of the water-closets.

Though the country is very flat, most of the grounds are fairly well drained, and but few have no shade trees. Many trees have been planted during the past three years, but the seasons have been so dry that no inconsiderable number have died. Nine schools have no shade trees, and the greatest number at one school is fifty-seven, while thirty-nine schools have twelve or over. Many of the schools have the trees arranged beautifully, but there seems to be too little attention given to beautifying the grounds with beds of flowers. I have attempted to stir up an interest in this matter and expect some improvement next year. Fences and gates in other places than the four mentioned, are generally well kept, and where I have reported them defective they are about to be repaired.

I report but forty-seven wells in sanitary condition. All are in a sanitary location, but owing to the very dry weather many of the others are without water, and a few need to be cleaned out.

All the schools have separate closets, but there are no less than fifty separate closets not properly screened, and eight of these belong to the four schools with unfenced grounds. One hundred and thirteen were in good condition, the remaining seventeen needing repairs. It is rare to find anything wrong about school closets now. In some of them you see traces of the barbarism of a few years ago, but very little sign of present immorality or uncleanness. Where I have seen the slightest trace of either I have called the attention of the pupils to it in such a way as to make them resolve to do better. Most of the teachers inspect the closets daily, a few weekly, and only two irregularly. These two will hereafter, I hope, look upon this as one of the most important duties of the teacher.

Grading of the Schools and Grounds.—I have graded nineteen of the schools I., thirty-seven grade II., and twelve grade III. Those graded I. are good, substantial, modern buildings, either brick or frame, most of them heated by furnaces, and supplied with fair means of ventilation, though not all having ventilating shafts. They have within, all the requisites necessary for good teaching, as well as providing for the comfort of the pupils.

Those graded II. are good fair school buildings, but not provided with modern means of ventilation. They are substantial, and though lacking in some respects, are still suited to the purpose for which they were constructed, and will answer for school purposes for a few years to come.

Those graded III., are small inferior buildings, cramped, destitute of porches or ante-rooms, and they really ought to soon vanish from the landscape and give place to better and more comfortable buildings.

As to the grounds, I have graded twenty-one grade I., thirty-five grade II., and nine grade III. Those graded I. are nicely levelled, have a good sod, are well shaded with trees fairly well grown, have proper walks where necessary, are kept trim and neat, with some attempt at ornamentation by means of flower beds: those graded II. are suitable for play grounds. they have been levelled and otherwise cared for, planted with trees, in some cases not grown yet into shade, and in some cases seeded but not yet having a good sod: those graded III., are, some of them, unfenced, and all neglected.

COUNTY OF LAMBTON, No. 1.

Charles A. Barnes, Esq., Inspector.

Teachers.—The health of the teachers is very good, sixty-one out of sixty-four reported as being in either excellent or good health, and seventy per cent. of that number as being in excellent health.

I cannot think that this is owing to the ease with which the work may be performed, or to the excellent sanitary condition of the schools, but rather to the rapidity of the changes in the profession; nearly forty per cent. of those reported as in excellent or good health are in the first year of teaching and twenty-nine per cent. of the remainder in their second year; and hence the injurious effects arising from teaching in unsanitary buildings are not observable, or have not had time to develop.

Many teachers, however, complain of being tired and worn out at the close of the day—this is doubtless owing to the exhausting labor required and the impure atmosphere of the school-room. This condition of things has also an injurious effect upon the pupils—they become languid and sleepy and more restless as the day advances, and hence I am satisfied these defects might be greatly remedied by a proper system of ventilation being insisted upon in all our public schools.

Pupils.—The use of glasses I think is not more prevalent than usual, at all events there are only nine cases in an aggregate of 1,700 pupils, which certainly is not very large. The usual games are football, baseball and cricket, but in many cases no particular sports are indulged in and no organized clubs are found among them.

Schoolhouses, etc.—The arrangements for scrubbing, sweeping, lighting fires, whitewashing, etc., are far from satisfactory. Fifty-three per cent. of the schools have not been whitewashed during the year, and many of them for several years.

Twenty per cent. have not been scrubbed during the year, and in many cases those that have been scrubbed were done by teacher and scholars on Arbor Day.

The sweeping in a majority of schools is done by the children at noon, and the pupils are thus compelled to eat their lunch in the dust of the school-room, or outside frequently in cold and stormy weather. The dusting of the seats, desks and furniture in these schools is not done at all, and consequently they do not present a very clean and tidy appearance.

In a number of the schools the trustees make their contract with the teacher to teach the school for a certain salary, the lighting of the fires and the sweeping being included.

There are, however, a few schools whose trustees take a lively interest in all that pertains to the well-being of the school, and these schools are not only efficiently conducted by the teacher, but the cleanliness of the room and the satisfactory condition of the premises are worthy of much praise.

School Grounds.—The school grounds have much improved during recent years but still much remains to be done to make all rank *first-class*. Walks are in many cases provided to the door of the school-room, of either gravel or plank, but to the outbuildings they are almost unknown, there being only eleven, or seventeen per cent., of the number reported that have walks and some of these are very inferior.

Shade trees are found in a large majority of the school grounds, but there are a few which have no shade trees, notwithstanding that the attention of the school authorities has been repeatedly drawn to the matter. The grounds are sufficiently large to prevent the necessity for any playing on the highway. In a large number of the sections the area of the play ground is *one* acre and the average is $\frac{2}{3}$ of an acre.

The closets, speaking generally, are in an unsatisfactory condition. There are no walks except those previously mentioned ; seventy per cent. are not screened, many have no doors, and forty per cent. of them are not in proper condition for use.

The attention of trustees has been repeatedly directed to this matter, but so far the results are not very encouraging.

I think some plan should be adopted by the Department that would secure better ventilation, and an improved condition of the premises and outbuildings.

COUNTY OF LANARK.

F. L. Michell, Esq., Inspector.

Teachers.—The health of the teachers is not worse than that of persons engaged in other work. A small percentage suffer from indigestion and liver complaint brought on by badly ventilated rooms and insufficient exercise. These teachers do not attend to the state of the air and to the ventilation of the rooms. Quite a number are injured by chalk dust, which produces catarrh of the throat. Trustees should be compelled to provide proper wipers or dustless crayons. There is no reason why teachers should not be as healthy as others, providing they observe the principles of hygiene with which they are all familiar. I should like to see a straight question placed on each half-yearly report, of this nature : “Do you as trustees honestly declare that your school affords comfort and convenience to the teachers and pupils, and has it been kept in a cleanly condition during the term ?” A satisfactory and truthful answer to this question should be a *sine quâ non* in respect to the apportionment of the school grants.

Pupils, etc.—I do not believe that pupils’ eyes are being injured to any appreciable extent under the present system. Very few pupils in this county use glasses, and these are either near-sighted by heredity, or affected by the diseases for which the school cannot be held accountable. I have known of only two cases of spinal curvature, and these were the result of too rapid growth. Overcrowding and bad ventilation are doubtless grave evils, but in our rural schools are not prevalent. Warmer schoolhouses and better heating appliances, such as could be obtained by stove casings, are more needed than larger school capacity. The heat supply is often both inadequate and badly distributed ; I am strongly in sympathy with your suggestions regarding sports and games. Many teachers not only do not direct the sports of their pupils, but do not even know what these sports are. Games that do not develop the faculties and give rise to healthy emulation are almost useless in the school economy. Could not a cheap pamphlet of school games be prepared and distributed with a view of encouraging progress along the lines indicated ?

Schoolhouses, etc.—I have experienced the greatest difficulty in getting trustees to keep the school buildings and outhouses clean. In many cases the floor would never be scrubbed, nor the walls whitewashed unless threats were applied. The regulations on this count can scarcely be too stringent. The school floors should be thoroughly washed with boiling water and soap, at least twice a year and the walls should be either thoroughly washed when painted or lime-washed when not, at least annually. Neither of these jobs is often well done, the trustees let the work to the lowest tender and the floor is mopped over with cold water and the walls are left in a condition far from satisfactory.

School Grounds.—Here also much carelessness is prevalent. The grounds are not kept free from thistles, and hence are unfit for the use of the children who are mostly in their bare feet in the summer. Too many of the lots are not kept neat and tidy and en-

courage the pupils to be satisfied with a slovenly environment. The condition of the closets in many cases is simply disgraceful. Double-closets are too common, and hence modesty—the crown of womanhood—is not encouraged. Separate buildings should be required, and the girls' closet should be carefully screened. The regulations should require the closets to be disinfected and regularly cleaned. The evil of dirty and badly constituted closets does exist and ought to be thoroughly stamped out.

I have graded the houses and grounds as directed, but so many factors enter to make up the grading that it cannot be fully dealt with. The regulations should be explicit, and after due notice trustees should be compelled to improve in these respects.

In conclusion, I beg to thank you for your efforts towards the improvement of our schoolhouses and surroundings. I can assure you that I have done what I could to meet your desire and if you, as I hope you will, require more attention to these important matters, I will carry out your instructions to the letter.

COUNTY OF LEEDS, No. 1.

William Johnston, Esq., Inspector.

(1) The hardships to which teachers are exposed during the winter have an injurious effect upon their health. (2) The impure atmosphere of the school-room weakens teachers, especially females. (3) Very few teachers maintain good health if they teach five or more years. (4) I do not think spectacles are more used now than formerly. (5) I do not see any signs of spinal curvature among pupils; the desks, with few exceptions, are suitable. (6) Organized games, etc., are almost unknown in rural schools. (7) The arrangements for sweeping, etc., are satisfactory: few schools are neglected in this respect. (8) The school grounds are by no means in a satisfactory condition. This remark applies to about one-third of the schools.

For several years I have made the "sanitary conditions of schools" my "peculiar care," and hence my schools are in fairly good condition.

COUNTY OF LEEDS, No. 2.

Robert Kinney, Esq., Inspector.

Teachers.—The average age of teachers is twenty-four years, while the average experience is four years. The average number of days lost by sickness during the year is one and a half, and in no case was the sickness chargeable to the school-room. The health of fifty-one teachers is reported excellent, twenty-nine good, and six inferior. They do not appear to suffer to any appreciable extent from the effects of bad ventilation or the unsanitary condition of the school-room. Perhaps this immunity is due to some extent to the small average attendance of pupils, being less than twenty, as well as to the enforced exercise in walking, morning, noon and night, to and from school. The health of the older teachers is either good or excellent.

Pupils.—Out of one thousand three hundred and forty-nine, seven wore glasses, or about one-half of one per cent. More attention is paid to the care of the eyes now than formerly, and this fact alone is sufficient to explain the increased use of spectacles. Without doubt, myopia and other diseases of the eye may be caused by continuous application of the eye for too long a time to the printed page, under circumstances where the light is not favorable, and where the normal conditions are not observed. While reading, the eye should occasionally be relieved, as in nature, by viewing large objects at long distances as well as small objects at short distances.

Schoolhouses.—In grading the school buildings we considered the kind of building, its capacity, its seating accommodation, lighting, heating, cleanness, and its means of ventilation. It seems to be a difficult matter in rural sections to get suitable caretakers for the school buildings, the result being that cleanliness is not as much in evidence as it should be. The use of the scrubbing brush, as a means of moral as well as physical education, is not well understood. The crayon is sometimes preferred to the broom. We are perhaps too busy *apperceiving* to *perceive* what is so plainly evident, namely, that cleanliness is not only next to godliness, but that it is also the basis of all sanitation.

School Grounds.—The grading of school grounds into classes I, II. and III. is based on general suitability, such as size, drainage, elevation, trees, fencing and caretaking.

Generally speaking the school grounds and closets are neither tidy nor well kept. If inspectors had the power to prevent the payment of the \$100 municipal grant in cases where trustees were either negligent or unwilling to discharge their duties in this matter, the evils that now exist would soon be remedied. At present the care taken of the school premises is far from being satisfactory. For the future we shall endeavor to deal with it fully and fearlessly as directed by the Department.

COUNTY OF LEEDS, No. 3.

T. A. Craig, Esq., Inspector.

Teachers.—(a) Health.—The accompanying statistical report shows that only about three per cent. of the teachers in this inspectorate are inferior in health, and that only one case of sickness is chargeable to the school-room. It is also noticeable that while the teacher spends about one-fourth of his time in the school-room, only one out of thirty-eight cases of sickness is reported as caused by living in the school. It will further be noticed that the average age of these teachers is twenty-three and one-half years, and the average years' experience is more than four. Considering these facts, one is forced to conclude that after all the teacher's life is not fraught with special danger, at least, during the first years of service.

(b) Exercise.—Many of the teachers—particularly the ladies—do not take a proper amount of outdoor exercise. While a good number are reported as having regular times for recreation in the open air, a considerable portion of their exercise consists of walking to and from their boarding-house to the schoolhouse. This distance is seldom more than half a mile, so that the whole distance thus travelled in a day would not exceed two miles.

(c) Special diseases.—The prevailing disease in this part of the province is nasal catarrh. Improper ventilation and want of cleanliness do much towards disseminating this disease. I cannot say that the teachers suffer from any special disease which may be said to originate in the school-room or be peculiar to school life. I am convinced, however, that there is a failing or breaking down of the weaker parts sooner than would have been the case had physical education received proper attention.

Pupils.—(a) Spectacles.—I found only three pupils, out of 1,385, wearing glasses. I also noticed a few children who were near sighted, but were not provided with spectacles. These facts indicate that there is no serious ground of complaint regarding the failure of the children's eyes.

(b) Deformities.—Such deformities as spinal curvature, rounded shoulders, curvature of the femur, one shoulder higher than the other, etc., are noticeable, and are no doubt the result of improper seating and improper attention to the position of pupils in their seats. Although I have reported only nine schools with defective seating, there are many in which the graduation of the seats is not what it ought to be. Teachers do not give enough attention to seating their pupils so as to guard against all conditions which either cause or tend to cause deformity.

(c) Sporting clubs, etc.—The teachers entirely neglect their work in the play ground. Few of them know how to make the best possible use of the recesses, and so do not take any part in the children's games. The organization of the pupils into clubs, or groups, and directing them in their games, is reckoned by most teachers as foreign to their work.

Schoolhouse.—(a) Scrubbing.—Trustees do not make proper provision for keeping their schoolhouses clean. A school-room should be scrubbed, at least, once a month or oftener; most trustees imagine that if they get it scrubbed once or twice a year it is all that is required. This work is in most cases very carelessly done.

(b) Whitewashing.—Very few schools are whitewashed oftener than once in three years, and, like the scrubbing, the work is frequently done by incompetent persons.

(c) Sweeping and dusting.—Most of the schools are swept daily, but this work is also too carelessly done. In many cases it is left for the pupils to do after four o'clock, or, during the noon hour. The dusting is frequently neglected altogether.

(d) Trustees neglect, and sometimes refuse, to make proper provision for keeping their schoolhouse clean, and as a result the sanitary condition of many of the schools is anything but satisfactory.

Grading of Schoolhouses.—I have graded as (a) Excellent.—Those having proper seating, special provision for ventilation, special arrangements for heating, good floor and walls, proper lighting, good blackboards, and windows in good condition and properly arranged.

(b) Good.—Those having proper seating, good ventilation, but, no special provision for admitting fresh air, ordinary heating, good blackboard, floor, walls and ceiling in good condition.

(c) Inferior.—Those having defective seating, ventilation not good, or only by opening door or raising lower half of windows; floor, walls and ceiling broken or requiring repairing, blackboard only fair and heating ordinary.

School Grounds.—(a) Condition of grounds.—The school grounds—with the exception of four—are dry and suitable for play grounds. The four which are rated inferior are so classed because they are rough and uneven. With two exceptions, every school in the inspectorate is provided with the required amount of grounds.

(b) Closets.—These buildings are neglected by both the teachers and the trustees. They are too often miserable make-shifts, instead of good substantial buildings properly screened and comfortable. I invariably report the condition of these buildings to the trustees, but I find that there is the same indifference, on the part of these officials, in performing their duties in this particular that there is in regard to the scrubbing and sweeping.

Grading of School Grounds.—I have graded (a) Excellent.—Those having ornamental fences along the highway, the remaining fences good, suitable gates, grounds level, dry, well planted with shade trees and provided with suitable walks.

(b) Good.—Those having ordinary board or log fences, good gates, dry, fairly level, partially planted with shade trees and having some walks.

(c) Inferior.—Those having fences and gates out of repair, grounds uneven or wet, few if any trees and no walks.

COUNTY OF LENNOX AND ADDINGTON.

Frederick Burrows Esq., Inspector.

Teachers.—The teachers of our rural schools are generally young and healthy. In most cases they remain so short a time in the profession that it is hard to determine to what extent they are affected by the conditions of their work. I am not aware of any disease peculiar to them. Bicycle riding and walking are the exercises usually taken in suitable weather.

Pupils.—The children attending our rural schools are usually robust and fond of physical exercise.

There is very little increase in the use of glasses. The light in the school-rooms is good and by means of blinds is in many cases admitted from the left and rear of the pupils.

In the recently built schoolhouses a good part of the light comes through high grouped windows behind the pupils. Spinal trouble is extremely rare. Our rural schools with few exceptions have become small, and the large cubic area as compared with the attendance has greatly lessened the effects of imperfect modes of ventilation. With the exception of measles and whooping cough our schools have been very little troubled with epidemic diseases this year.

Schoolhouses.—As many of our rural schoolhouses are wood-ceiled, washing or painting has taken the place of whitewashing in such.

A good many of those plastered were whitewashed this year. Arbor Day is largely devoted to a general cleaning up of both houses and yards. The trustees usually have the houses well scrubbed at least once a year. The sweeping is done in many cases by pupils. As a general thing I find the teachers anxious to have their school-rooms clean and neat, and willing to lend a helping hand to keep them in this state. Both ventilation and proper lighting are receiving due attention in the erection of new buildings.

School Grounds.—On some of the sites selected many years ago, because of their rocky and valueless condition it is extremely difficult to maintain a fence or make a tree grow. These old rocky sites are, however, dry and healthy.

As by-laws exist restraining cattle from roaming at large, some trustees are disposed to leave their school grounds without a front fence. This I have opposed, and have been met with the answer that the regulations are not mandatory. The grants are so small in many cases that the threat to withhold them has no great force. It seems to me that inspectors should have the moneys payable under section 109 under their control, to bring negligent and parsimonious trustees to a sense of the duty they owe to the rising generation. The school grounds are sufficiently large, none being less than half an acre, and most of them dry and suitable for play grounds. The closets are cared for much better than formerly. I have advised that the sweeping of the school-rooms be thrown into them. The dust being limy serves not only to deodorize the closets, but to disinfect them as well. I have in some cases to complain of the remissness of teachers as well as of trustees in the matter of the out premises.

COUNTY OF LINCOLN.

James B. Grey, Esq., Inspector.

Teachers.—The general health of our teachers is excellent. In the county of Lincoln there are sixty-four rural teachers, of whom fifty-eight are under thirty years of age, and these, with two exceptions, are physically strong and enjoy good health. Their power of endurance seems to be little effected by the work of the school-room. Of course, owing to the great expenditure of nervous energy, a feeling of weariness is frequently felt at the close of the school, but this soon wears away. So far as I have observed during my long service, I cannot say that any of the ailments referred to in your circular are peculiar to the profession. To maintain unimpaired their physical powers, teachers walk a great deal, and quite a number, both male and female, ride a wheel. I know of only one case in which a teacher's health suffered from an overcrowded, ill-ventilated room. The cause has been removed by the trustees erecting a new and commodious schoolhouse.

Pupils.—I do not observe that spectacles are more used than they were ten years ago, or that the number troubled with near-sightedness is increasing, neither do I see any signs of spinal curvature or rounded shoulders that can be attributed to improper positions

in sitting, or to any other cause incident to school life. With our improved desks, and with proper care on the part of the teacher, these deformities should, instead of increasing, decrease. In the rural districts the organization of clubs for outdoor sports does not receive the same attention as in towns and cities. It is a rare thing to find a teacher, especially a lady, directing or supervising the games of the boys.

Schoolhouses.—Trustees in this county usually arrange with one of the scholars to light the fires and sweep and dust the school-room every day, at a salary varying from \$15 to \$25 a year, and, according to the reports of the teachers, the work in most cases is satisfactorily done. As a rule, our school-rooms are scrubbed out three times a year at an extra cost, and when the walls and ceilings are not papered or wainscotted, they are, with some exceptions, whitewashed once a year.

School Grounds.—Quite a large proportion of the playgrounds are well kept, well drained, neatly fenced, supplied with good walks, and as large as the law requires. I believe every lot has been planted once or oftener with shade trees, but either from want of care, or the unsuitable nature of the soil, the trees in many instances never came to anything, so that under this item I am unable to make a very satisfactory report. Your impression in regard to the sanitary condition of the closets is correct. I frequently find the boys' closet in a filthy state, due generally to the neglect of the teacher. I find it impossible to get young female teachers to inspect the closets regularly, or talk to the boys about the necessity and propriety of keeping these places clean. How to keep them in good order is one of the most perplexing problems an inspector has to deal with.

Grading of Schools.—Of the thirty-seven schools reported upon, I have put down nineteen as excellent, because the buildings are comparatively new, in first repair, well lighted and heated, and well ventilated; thirteen as good, because they are not equal to the first grade in the above particulars; and five as inferior, because the buildings are old, and will have to be replaced by new ones in the near future. Of the school grounds, I consider thirty as excellent, because they are dry, level and well fenced; six as good, because they are dry and well fenced, but the ground is somewhat uneven; and one as inferior, because in spring and fall, or during a freshet, the ground is wet.

COUNTY OF MIDDLESEX, EAST.

J. Dearness, Esq., Inspector.

(b) In most cases teachers cannot or do not attribute their ailments to any particular cause.

(c) Only a few of the teachers report taking systematic physical exercise (calisthenic, etc.), but nearly all say that they get, in some way or other, sufficient exercise to keep them in health. The majority are young persons who have been teaching only two or three years. The few who have taught twenty years and upwards raise the time of average experience beyond the proportion of their numbers.

(d) Many teachers could not tell when the school-room was last whitewashed. The times reported vary from one to nineteen years.

(e) In many instances the windows were constructed to move on weights, but now one or more are out of repair.

(f) I have not regarded a manhole in the ceiling nor even a flue in the chimney as structural ventilation. The latter in some situations affords considerable ventilation but at the best is inadequate.

(g) It is easy to count the number of pupils who wear glasses, but the number of near-sighted children is quite different. Not all of those wearing glasses are myopic, and many whose vision is short of normal are without glasses. It is only the former who are enumerated in this report.

(h) This number was difficult to obtain. Sometimes when the children were asked, "How many of you ever have headaches in school?" nearly all would raise their hands. I tried to get only those who frequently have been known to have headache.

Nearly every teacher said the pupils are more easily managed in the forenoon than in the afternoon.

(i) I did not get the number of children who suffered from epidemics. The slips asked only the nature of the epidemic, if any. There was typhoid in two sections, diphtheria in one, chicken-pox in fifteen and whooping-cough in seven, sufficiently general to be described as epidemic.

COUNTY OF MIDDLESEX, WEST.

H. D. Johnson, Esq., Inspector.

Teachers.—The teachers in this inspectorate as a whole enjoy excellent health. They do not suffer from any disease that is peculiar to themselves. They do not appear to suffer from such diseases as myopia, bronchitis, pulmonary or neurotic troubles any more than those engaged in other callings. Not a single teacher engaged in the rural schools in 1898, so far as I am aware of, had to use glasses. The time lost by them on account of sickness was considerably less than an average of a day for each teacher during the year 1895, and in no case is it chargeable to any defect in the school-room, but the result in one case of an accident and in the others caused by some slight ailment. Owing to the improved condition of farmers, teachers are now able to secure a comfortable boarding place in almost every rural section convenient to the schoolhouse, which no doubt contributes very materially to their health.

Pupils.—Glasses are not more used now than they were six years ago when I made my first visit to the schools. I found only thirteen pupils in the division that used them in 1895. Pupils do not show any tendency to spinal curvature or rounded shoulders. They all love and enjoy play just as much as their studies. There are only three school houses in the district that are below the departmental regulations for size, and many of them are far beyond the requirements in this respect, so that overcrowding is now almost unknown in the schools. The popular games among the pupils are cricket, ball of various kinds, "bear," "steal the wedge," jacks, marbles, etc. I found only one properly organized sporting club among the boys.

Schoolhouses.—All the school-rooms except four are swept daily. The sweeping is almost invariably done after school hours. In the case of the four that are not swept daily the attendance is very small, being only from five to ten. Trustees with very few exceptions make provisions for sweeping, dusting, and scrubbing by hiring persons to do it. Some of the schoolhouses are scrubbed monthly, some quarterly, some half-yearly, and a few only yearly. Very few of them are whitewashed annually. A large number of them do not require it as they are ceiled with wood which is either oiled or painted. A few of them are papered. The sweepings are generally burned.

School Grounds.—The grounds are generally kept neat and tidy. Arbor Day has done much towards securing this desirable state of things. There is only one yard in the inspectorate that is too small—the average size being 6.7 of an acre. Very few of them have all the walks that are required. From the dry, gravelly, sandy nature of the soil in many of them walks are not much needed, as the paths formed by the pupils from the gates to the school-room, and to the closets, are always dry. All of them have been planted with shade trees, in many cases more than once. Where the soil is suitable these have done well, but where the soil is hard and clayey they have frequently withered and died even after they had grown one or two years. The yards with two exceptions are properly drained.

The state of the closets has improved during recent years, but their condition in too many instances is still far from being satisfactory. They are usually cleaned once a year

and in some cases oftener, but there does not appear to be any systematic attempt at regular weekly or monthly disinfection. There is a growing feeling in the majority of sections in favor of keeping them properly, and this I am persuaded will have a wholesome effect as the chief difficulty that I have found is not so much in getting trustees to put them into a proper state as to get them to keep them properly afterwards. Nearly all the teachers inspect them daily.

Grading of Schools.—In grading schoolhouses for grade I., I have required the school room to be (a) of proper size, (b) in thorough repair, (c) properly furnished and the furniture in excellent repair, (d) fair means of ventilation, (e) building comparatively new. I also considered the general excellence of the building.

For grade II., I have required the schoolhouse to be (a) of proper size, (b) in good repair, (c) properly furnished and furniture in good repair, (d) fair ventilation. I also took into consideration the general state of the building.

I placed all the other schoolhouses that did not come up to the most of these requirements in grade III.

Grading of School Grounds.—In grading school grounds for grade I., I have required the school yard to be (a) of proper size, (b) excellent from a sanitary standpoint, (c) fences and closets in proper repair, (d) some trees and a well properly kept, (e) general suitability of the grounds for school yard purposes.

For grade II., I have required the school grounds to be (a) of proper size, (b) good from a sanitary standpoint, (c) fences and closets to be at least in fair repair, (d) well properly kept, (e) general suitability of the grounds for school yard purposes.

School grounds that did not come up to most of these requirements I placed in grade III.

COUNTY OF NORFOLK.

J. J. Wadsworth, Esq., Inspector.

Teachers.—It will be gathered from the tabulated report that the teachers of Norfolk are healthy and vigorous. It is seldom that a teacher is absent from his school on account of illness. The schoolhouses are very seldom overcrowded (I refer to the rural schools) and the condition of living requisite to the maintenance of a high standard of health are found in nearly every section. I feel certain that philanthropists may restrain their solicitude as to the health of our teachers. They take abundant exercise, many using the bicycle; and are as robust, and have as good a chance for long life as any other class in the community.

Pupils.—As to myopia, it is not on the increase. Spectacles are more frequently worn by children now than formerly, but there is no increase of ocular trouble. Nor is there any tendency to spinal curvature or other deformity. Country pupils find ample scope for muscular development in their long walks to and from school—in helping on the farm—and in numerous games on the playground. The schoolhouses are well warmed and well ventilated; and it is very seldom that I hear of the death of a pupil.

A number complain of headache—not many (84 in 6,000). But it is not over-study that causes it.

Schoolhouses.—The schoolhouses are regularly whitewashed, when not papered, or ceiled with wood, as many are now—matched boards, varnished, and there are only occasional instances of neglect of scrubbing and sweeping. “The elementary principles of cleanliness” are certainly not neglected in Norfolk, in either town or country, except occasionally, when a line from the inspector is sufficient.

School grounds.—I have no complaint to make of these—although I have occasion to notify trustees more in regard to them than anything else. Fences and gates and out-houses, etc., will get out of order, and trustees are not as prompt to repair them as is

desirable. The teachers co-operate with me in endeavoring to keep matters right and if they could spend a few dollars annually for trifling repairs without waiting for the action of the trustees it would be an advantage. It is not an annual wholesale over-hauling that is wanted, but "the stitch in time that saves nine," and it is seldom that trustees can be got to attend to these trifles.

The boys' water-closets are a source of constant trouble. Some better device is needed. The perforated shelf is a failure. A long urinal outside the w. c. is required for one thing; and some different kind of seat.

The girls' water-closets are invariably in good condition.

Grading of Schools and Grounds.—The tabular statement shows the grading. In making it I have taken into account the size, construction, condition and furniture of the building as well as many other items; and with respect to the grounds, have kept in view what an ideal school yard should be.

But in making such judgments it must be remembered that the size and wealth of the section must be kept in view.

Summary.—Upon the whole then, from a sanitary point of view, there is little to complain of in the rural schools, shelter, warmth, air, light and comfort being almost universally found. There has been a wonderful advance in these matters during the last twenty years; and there is certainly no ground for apprehension that disease or any physical defect has its origin in the rural schoolhouse.

COUNTY OF ONTARIO.

James McBrien, Esq., Inspector.

Teachers.—Man is an organic unity, and therefore a healthy body is a healthy mind. Hence I direct my best efforts to secure every influence that will preserve and promote sanitary conditions in and around the schoolhouse. My ambition is to make it the sanitarium of the school section. I have lived to see this accomplished in part. It is a rare occurrence now to see the pale emaciated children that I frequently met with not two decades ago. My teachers, as a rule, co-operate heartily in this great and beneficent work, the redemption of the body from the bondage of ignorance.

One hundred and six out of one hundred and twenty-nine teachers have fixed rules for exercise, the great instrument of all development and, therefore, in strength, vigor and endurance they compare favorably with any other class of society. Hence they are qualified to diffuse the sunshine of cheerfulness among the little ones, as good as a tonic for them. Hence they are also as free from myopia, bronchitis, phthisis, or nervous trouble as any other profession.

Pupils.—There were only thirty-seven pupils out of 2,500 that were using spectacles at my last inspection. We have observed the law of the muscles with respect to the position of the pupil, whether sitting, walking, or standing, and therefore they are growing up perfectly straight and full chested, thanks to physiology and hygiene. During my last tour of inspection, I met with only one case of spinal curvature, and by enquiries, I was convinced it was caused by constitutional weakness.

School Grounds.—In general, they are "tidy and well kept." They are well fenced, planted with trees and many of them decked with flowers. We have 3,284 trees flourishing, that is to say, thirty on an average for every section in the country. The size of the playgrounds is a little more than seven-eighth of an acre on an average. The wells are annually cleaned out, disinfected, and some of them ventilated. My purpose is to see that they are all ventilated. The closets are regularly cleaned out and disinfected, with a few disgraceful exceptions. When I come to such I set the Board of Health in hot pursuit of them. I am often at a loss to know the name of the secretary of the board. The law should require them to send the name to the county inspector.

Schoolhouses.—The most of my schools are swept every evening and scrubbed three times a year by a janitor. They are whitewashed every two years, according to reports. Some are painted and varnished, I consider this superior to whitewashing, as the microbes cannot make a home in the paint, nor the dust find a lodgment, as cleanliness is a part of godliness. When we meet with a dirty schoolhouse, we raise a little earthquake. This now is a very rare occurrence.

Grading of Schools, etc.—In general terms I made the fulfilment of the requirements of the regulations the basis of my classifications with respect to dimensions, equipment, planting and ornamenting grounds. I did not compare the 1st class with 2nd, respecting the situation of the sites.

COUNTY OF OXFORD.

William Carlyle, Esq.

Immediately after the passage of the new school Act, 1871, Oxford began the erection of new school buildings, and seventy-five were erected before the introduction of the regulation that now governs the capacity of school-rooms. Hence some schoolhouses comparatively new and in good condition, fall short in cubical contents of the requirements of the latest regulation. Since the erection of these buildings, great improvements have been made in school architecture and equipment. The more recently built schoolhouses are splendid in design and equipment. Every inspectorate will have its specialties. After this county supplied a new building in every section where one could be reasonably asked for, amounting to three-fourths of the school sections, a common desire actuated all concerned in school management to advance the schools themselves, morally and intellectually, to a state of efficiency that would make them worthy of the improved accommodation provided for them. In this, the most important feature of school improvement, success, I am satisfied, has been attained.

Now in turn another advance can be made on the line of accommodation, and your circular will have its effect in suggesting wherein school buildings and grounds can be made conducive to better sanitation, and as a matter of course to more satisfactory progress on the part of the pupils.

COUNTY OF PERTH.

William Alexander, Esq., Inspector.

Teachers.—About thirty-seven per cent. of the teachers report their health as being "excellent;" fifty-nine per cent., "good;" and four per cent., "inferior." Very little time is lost by our teachers on account of sickness, and I think the instances are rare where the teacher's illness can be traced to any unsanitary condition of the school-room.

Pupils.—Very few pupils wear spectacles, and I am quite sure the number has not increased during the past ten years. Physical defects and deformities are rarely met with among the pupils. As our school-rooms are better lighted and are provided with more comfortable seats and desks than formerly, one would not expect to find physical defects on the increase.

Comparatively few of our schoolhouses have what might be considered a complete system of ventilation, but nearly all of them can be tolerably well ventilated if in the hands of thoughtful and careful teachers. During the winter months, however, when the attendance is large, and when warmth seems to be the first consideration, I believe the pupils often suffer from a poisonous atmosphere, more especially where there are no structural arrangements for ventilation. The health and general welfare of the children lie largely in the hands of the teacher, and this makes it all the more important that our schools should be in charge of teachers of good sense and good judgment.

Only a small percentage of our teachers take any interest in the sports of the children, and with the exception of a few football clubs there are no organized sporting clubs among the boys.

Schoolhouses.—During the past ten or twelve years there has been quite an improvement in the condition of our schoolhouses. The schoolhouses are in general fine, respectable buildings. Twelve rural schools have basements and are heated with furnaces.

In a great majority of the sections a person is employed to sweep the school-room daily, and in winter to light the fires in the morning. Provision is also made for scrubbing the floor several times a year. The number of school-rooms whitewashed seems small, but this is owing to the fact that in many schoolhouses the walls and ceilings are painted and tinted and only require brushing down or washing, and in a good many others the walls and ceilings are made of wood, oiled and varnished. I find that more attention is given, each year, by trustees to the cleanliness and orderly condition of their school-houses.

School Grounds.—For the most part the school grounds are well kept, and are nearly all provided with a well, woodhouse, separate closets, gravel walks and a goodly number of shade trees. In a few cases it has been found impossible to get good water on the school premises, and arrangements have been made to get a supply of good water elsewhere. As to the closets, I too often find them in a most unsatisfactory condition. In winter the doors are found standing open and the closets partly filled with snow. Again and again I have recommended that weights or springs be attached to the doors so that they would not remain open. I have asked the teachers to inspect them daily and see that they are kept in good sanitary condition. The bad condition in which many of them are is chiefly owing to the negligence of the teacher.

The requiring of this sanitary report will, I believe, have a good effect, as it very pointedly directs the attention of trustees and teachers to the requirements of the law regarding the proper care of the indoor and outdoor school premises.

COUNTY OF PRINCE EDWARD.

G. D. Platt, Esq., Inspector.

Teachers.—My observations of the general health of our teachers fully bear out the figures in my statistical report. During my entire tour this half-year I did not find one teacher laid aside by illness, or even complaining of indisposition. Only two reported their health as inferior. The number of days lost by illness would probably have been much less but for the prevalence of an epidemic known as German measles which attacked many schools and from which the teachers did not escape.

Only twenty-six are reported as having fixed rules for exercise, but nearly all take regular exercise in some form or other—many by taking long walks to and from their boarding places, others by assisting in household duties and in other ways. Most of the teachers take part in the games on the play ground to a considerable extent, but very few carry their supervision as far as is necessary to secure the best results in developing and strengthening character.

Pupils.—Of over 1,400 pupils present at the time of my visits only twenty-seven are reported as in feeble health, and only fifteen as wearing glasses. A few other pupils should have glasses, but very few. I see very little change in this respect in the rural schools, but I shall have a different report when I come to the towns.

I have not noticed any case of physical deformity due to the school seats and desks. As to overcrowding, we have hardly an instance in our rural sections. The great trouble

is that our school population is not half equal to the school accommodation. In seventeen schools the attendance at my last visit did not exceed twelve at any one, and in only thirteen schools were there more than thirty pupils in charge of one teacher.

In the larger schools, baseball and football clubs are formed, and considerable enthusiasm is manifested by the pupils, and in the smaller schools oftentimes boys and girls take part in the same game of ball, frequently under the eye of the teacher. Only twenty-five pupils of the 1,433 are reported as indifferent to play. This circumstance should furnish a fair indication of the condition of the pupils' health.

Schoolhouses.—The number of school-rooms reported as below the regulations in cubic contents for the number enrolled is, with perhaps an exception or two, sufficient for the number in actual attendance.

The small attendance at most of our schools may be accepted as the explanation why more has not been done to secure better means of ventilation, and is also sometimes made the excuse by trustees for the neglect of duties which would be more thoroughly discharged in cases of necessity.

A large number of our schoolhouses are sealed inside with lumber instead of being plastered, thus doing away with the necessity of whitewashing. In others the whitewashing is too often left until the walls and ceiling become dingy and disfigured with smoke, or in some other way.

The floors are scrubbed and the desks and woodwork washed generally twice a year, in a few instances oftener, but in others not more than once a year. This is done by some persons employed by the trustees, but in several sections the trustees report that it is impossible to find one to hire for the purpose.

The sweeping is usually done by a caretaker, but in several schools the task falls to the pupils. This is especially the case in small schools. With very few exceptions the sweeping is done every day.

Very little has been done in the way of structural ventilation for the reason above referred to, though in most houses the windows are lowered from the top and other devices employed for the purpose.

School Grounds.—These are as a rule well kept. In nearly every case they are clean and dry at all times of the year. One too common disadvantage is that the soil is poor and not suited to the growth of shade trees. This of course applies to a small minority of about a dozen schools, but is sufficient to mar the general character of the record. A large portion of the grounds have been properly enclosed, but in some instances the front fence has been removed as an unnecessary hindrance in the winter, or not required for use or ornament at any time. I may say that the custom is being quite extensively applied to private residences, and where cattle are not allowed to run at large does not seem so objectionable as formerly when this was not the case. Still I prefer to have the front fences retained. A considerable degree of taste and care are manifested not only by teachers and pupils, but by trustees as well, in keeping the premises neat and attractive.

Most of the grounds embrace half an acre and a few are still larger. All the schools have separate closets, except one, which is a very small school. In nearly every case the closets are screened from one another, but in many cases not from the road. In answer to my repeated demands, trustees are generally careful to have these places kept in good condition. The greatest difficulty is experienced in the winter from the impossibility of keeping them free from snow. The paths to the closets are all right in the summer, but sometimes neglected in the winter. Teachers should call upon trustees to have this matter attended to when necessary.

Grading of Schools.—I did not have this matter in mind during my last visit, but from my intimate knowledge of every house and grounds, I find no difficulty in making the required classification.

As to the house, I consider its external condition and appearance, door and approaches, porch, etc.; its internal arrangements—stove and pipes, seats and desks, blackboard, windows, height of ceiling, general neatness, tidiness, cleanliness, brightness and air of comfort.

As to the grounds, their size, condition of the surface, condition of the fences, number and size of the shade trees, appearance and location of the closets and condition of the same.

I desire to add in the matter of *wells*, that at first I insisted on a well for each school site, but afterwards I allowed as an alternative, that a school board might obtain the right to get water from the nearest neighbor, and results show this to be the more satisfactory arrangement. Several of the wells at the schoolhouse have been abandoned, either on account of the quality of the water—that is from its mineral taste—or from the great difficulty of keeping it in order, and its going dry frequently.

In classifying the schools of Prince Edward according to the character of the buildings, I regard twenty-nine as excellent, forty-one as good and five as inferior.

The school grounds I would arrange as in my statistical report, thirty-eight excellent, thirty good and seven inferior.

COUNTY OF RENFREW.

R. G. Scott, Esq., Inspector.

I find it is very difficult to get trustees to realize the importance of regularly attending to the cleanliness of the school room, and having the walls and ceiling cleaned and whitewashed even once a year.

Much difficulty is also experienced in having window blinds provided and properly set up. However, the teacher is usually a valuable auxiliary in this matter.

The sweeping of the school-room is generally well attended to by the teacher and pupils, and of the seventeen reported as not swept daily, the greater number are swept regularly three times a week.

There is no matter regarding which I have observed such surprising indifference on the part of trustees as that of water-closets. In many cases the strongest representations have been of no avail till a threat of the withdrawal of the grant has been made. There are, in fact, four such cases pending at present.

In choosing school sites trustees almost invariably exercise due care to select as good locations as the circumstances will admit of.

In building new schoolhouses, of late years, the trustees attend to the four following points at least:

They build them of a size suitable to the numbers attending; they put them on well-built stone foundations; they lay close, double floors; and they put in long, high windows.

Although the sashes are hung on weights in so few instances, still a considerable number are furnished with other appliances for lowering and raising them.

UNITED COUNTIES OF PRESCOTT AND RUSSELL.

W. J. Summerby, Esq., Inspector.

Teachers.—The great majority of our teachers are young and in excellent health. The four cases of sickness reported as referable to the insanitary condition of the schools were, in three instances, due to bad ventilation; and in the other, to a bad floor, and consequent cold drafts.

Many cases of slight illness not reported are no doubt due to the breathing of impure air ; and it is probable that a good deal of the listlessness observable in some schools is owing to the same cause.

Pupils.—Eyesight. A very small percentage of the pupils are myopes, and not many of those wear spectacles. A better knowledge of physiology will no doubt in time put a stop to this neglect. I have not found that the pupils' eyes have been injured by imperfect lighting of the school-rooms.

Rounded Shoulders. A good many cases of rounded shoulders are to be seen in the schools. Improved seats and simple calisthenic exercises will cure this ; but it is astonishing that a great many parents are opposed to any systematic physical exercise in school. They look upon the time spent thus as wasted.

Games. Running games and the various ball games seem to be favorites. A few schools have croquet sets. Very few large boys go to school ; and so the boys and girls in many schools play together.

Schoolhouses.—Ventilation. As shown by the statistical report, the great defect is the lack of any effective means of supplying a sufficiency of fresh air. Only one-ninth of the schools are reported as having any structural means of ventilation ; and in some of these the means are crude and imperfect. Many other schools are supposed to be ventilated properly, *i.e.*, they have a hole in the ceiling. I have given no credit for this in the report.

Sweeping, etc. The arrangements for sweeping, scrubbing, etc., are not generally satisfactory. It appears that in many sections there is no person that will do such work. The result is that in the purely rural districts the sweeping must be done by the teacher and pupils. It is thus usually done at noon ; and, considering the circumstances, is, as a rule, done fairly well.

Whitewashing. Many schools are unplastered, being finished in wood. This partly accounts for the apparently small percentage of whitewashings.

School Grounds.—Small sites. The neglect here is general. In many of the older sections the site is a mere recess beside the road, scarcely large enough for the school house and the necessary outbuildings.

Sanitary Condition of Sites. In classifying the sites with respect to the sanitary conditions I have considered the essential point to be the natural state of the ground. Nature has done much for us ; and the sites are almost invariably healthful ; but, as a rule, little has been done to improve upon nature.

Fences. With respect to fencing, it will be seen that I have placed three-fourths of the grounds in the lowest grade. An obstacle to fencing has been the fact that yards fenced all round drift up to the fence tops. With wire fences the drifts are avoided ; but the barbs were an objection. Now, with the introduction of smooth wire fences that are firmly locked together, I expect to see many more of our grounds fenced in the near future.

Closets. Rather fewer than one half of the schools are provided with closets under separate roofs ; nearly half have two closets side by side under one roof, but with separate entrances. The few remaining schools have either no closets (6), or only one (8).

Only one-fifth are reported as in a satisfactory condition as to cleanliness ; about one-half were found fairly clean ; and the rest were in a still less satisfactory state. Here, again, as in the sweeping and scrubbing, it appears to be impossible for many of the trustees away from the villages to get any one to do the cleaning.

Bases of Classification of Grounds. The following are the bases of the grading of the grounds : (a) the natural situation of the site ; (b) the drainage, levelling, etc. ; (c) the fencing ; (d) the water supply ; (e) the outbuildings.

COUNTY OF SIMCOE, NORTH.

J. C. Morgan, Esq., Inspector.

Teachers.—The general health of the teachers, according to their own statements, varies from excellent to good, any other cases being exceedingly rare, and my own observation seems to confirm this. Nor is it to be wondered at, since most of the teachers in rural schools are young people under twenty-five years of age, and are therefore possessed of the health and strength usual in youth. But even in the case of those who have had a good deal of experience as teachers, I do not find many instances of bad health, nor in all these instances is the lack of health and strength to be ascribed chiefly to their profession. It is fortunate that in most instances the teacher boards so far from the school that a reasonable amount of exercise is taken in walking to and from the school four times in the day, and in the majority of cases this walk is extended after dismissal at 4 p.m. It is however a matter of regret that so few teachers go out at recess, and that some few do not even take the trouble to ventilate their school thoroughly at these times. It is difficult to say what diseases are most common among teachers, there are so few well-defined cases of chronic disorders, but diseases of the digestive organs and bronchial troubles are probably the most frequent, the former being to some extent accounted for by the sedentary habits, the short hour at dinner time and other conditions which necessarily surround teachers, the latter being, I think, inseparable from any profession requiring as much speaking aloud as the average teacher is called on to do. I am not able to make any suggestions looking to the removal or the lessening of these evils.

Pupils.—Comparing the pupils of to-day with those of twenty and twenty-five years ago I am unable to see any material change in any respect so far as the general health is concerned. This is, of course, in rural schools; in town I am of opinion that round shoulders, listlessness and indifference to active, healthy sports are much more common than they used to be. It is true that in country schools the use of spectacles has decidedly increased, but even now the statistics show that there are few pupils who use them, whilst we all know how cheap and readily-obtained they are now-a-days as compared with a few years ago. We have little or no overcrowding in rural schools except for short periods during the year, and although the ventilation is, as a rule, not of the best, the evil results do not seem to be either great or permanent. It is to be regretted that so few clubs for cricket, football, etc., exist, but the conditions which obtain in the average rural school almost prevent their existence. Many of the pupils have long distances to walk after dismissal, and nearly all of them are required to assist in different ways about their homes. It is therefore impossible for them to remain about the school for any time after four o'clock. During the dinner hour however (in nearly every school), and at recess time football, baseball, and other active games (rarely cricket) are freely indulged in. In addition to this a club exists in many sections, and is joined by both the teacher and the elder scholars who thus have—during the long summer evenings—many opportunities for active exercise and healthful recreation.

Schoolhouses.—I am sorry to be compelled to report that the improvement made in schoolhouses is not as great as I could wish, and I must perforce accept my share of responsibility for this, inasmuch as whenever I have been compelled to choose between the spending of money on the schoolhouse (on the one hand) and on the salary of the teacher and the purchase of apparatus (on the other) I have usually decided in favor of the latter. The statistical report will however show that most of the schoolhouses are whitewashed or kalsomined once a year, and that where not so reported, the explanation is (sometimes) to be found in the fact that they are not only ceiled but entirely lined with wood—oiled and varnished. In every case the schoolhouse is scrubbed once a year, usually twice, occasionally (too much so) more than twice. Every schoolhouse is swept at regular intervals, almost always once a day, but the mode is not always satisfactory. Too often one of the elder pupils is employed with the result that the work is indifferently done, and in some cases the pupils voluntarily undertake it in turn, with consequences even worse. I think that the law could with advantage be made more decided and

stringent on this point. The whole question is, however in rural sections, beset with practical difficulties as great as are undoubtedly the dangers to health which almost everywhere obtain under existing conditions. It is, in my opinion, marvellous that epidemic diseases are so rare as they have been in my inspectorate, and somewhat careful investigation has hitherto shown me that the outbreaks which have taken place have been due to importations from other places rather than to any predisposing causes existent in the section itself.

School Grounds—Are too often anything but well kept, indeed the outside arrangements are usually worse than anything else. It is true that most of the yards are cleared and kept fairly clean, and free from stones, but too often the sweepings from the school itself are to be found collected in corners of the building or are blown to all parts of the yard. Most grounds are properly fenced and almost all are planted with trees, though the majority of these are too small as yet to be of any use for shade. I have encouraged the naming of trees after public characters, and the giving the care of these into the hands of individual classes or pupils, but the constant change of teachers seems to render imperative (for the most part) any efforts in this direction. Being very fond of flowers myself I have succeeded in educating about sixty per cent. of the teachers to having a couple of flower beds kept quite nicely until the June holidays, after which they are usually neglected. In many schools however the windows are quite filled with blooming plants, hanging baskets, etc., which are taken home by pupils, cared for during midsummer vacation and brought back again when school re-opens. The yards are nearly all quite large enough for the pupils, and where they play on the public roads, it is usually from choice, and for the most part the practice is not attended with any evil results. There are proper walks in the majority of schools and these are rendered necessary by the condition of most of the yards in spring and (to some extent) in autumn. In most cases the site is selected with a view to natural drainage, as anything else is usually impossible, and every care is exercised in this direction, but when the heavy snowfall melts in spring, and occasionally with the constant autumnal rains, it is difficult to have the school yards in anything like a decent condition, the exceptions being those of an acre in extent where a "sod" has been carefully encouraged.

The evil which is most prevalent, and which, to my mind, is at once the one most to be feared and the most difficult to meet is the condition of the closets. A glance at the statistical report will show that there are (universally) two separate closets for the sexes, and that the rule is to have them to some extent screened, but in the endeavour to secure privacy they are too often taken to the extreme corners of the yard at the sacrifice of other considerations. It must be evident to any thoughtful teacher that when they are thus placed at a distance from the school itself, children will avoid going to them when it is raining, or very cold, or when the snow is very deep. It has been too painfully manifest to me on several occasions that the woodshed, etc., have been used instead, and—to some extent at least—this is very common. The attention of the teacher is of course always drawn to it, but this has to be done again and again with each new teacher, and the total prevention of it seems to be a task well nigh hopeless. To the disturbing conditions mentioned above, add the facts (1) that sometimes the door will be left open (not an uncommon thing) and the next morning will find the building itself half filled with snow, the approaches being entirely blocked; (2) that where the school ground is used by some athletic club the young men and elder lads in the section (who have left school) are responsible, I believe, for much that is objectionable about the outbuildings, and of course a very young teacher, especially a female, finds it exceedingly difficult to exercise any control or supervision over such persons, indirectly backed, as they too often are, by a lax sentiment and a carelessness about these things on the part of the ratepayers which is, to me, wholly incomprehensible. It is no uncommon thing for the teacher (when I have been compelled to remonstrate warmly about something) to show me that the door has been forcibly broken open or off, and to add that his efforts to trace the guilty persons have been looked on with indifference or openly ridiculed. I fear that the *public* sense must be aroused thoroughly before much is accomplished in the way of reformation. This is equally true with respect to the obscenity occasionally met with, this being even a

more fatal evil than the other. Whilst it is true that much of it might be traced to big boys not attending school, it is not confined there, nor indeed is it restricted to boys alone, and it requires a teacher of some power and influence, whose vigilance is as sleepless as his abhorrence for obscenity or profanity is profound, to cope successfully with the evil. And it is just here that the weakness of having so many young and utterly inexperienced teachers is so keenly felt. Whilst so much, so *very* much, yet remains to be accomplished, it is gratifying to know that a steady improvement is going on, and that where I can retain a teacher in the same school for any time I can at least almost entirely prevent any *external* manifestations of the evil. In all the newer schoolhouses the difficulty has been practically overcome—at least in these directions—by a plan for building woodshed and closet all connected with the school, which I am succeeding in having generally followed. A plan of it exists, I believe, in the Department, at least a duplicate was sent there at the time of the Philadelphia Centennial, when I was fortunate enough to secure first place with the original plan in the competition for rural schoolhouses. There is but one defect, but as this is inconsiderable as compared with any one of the many evils usually met with, and as even this cannot exist with a vigilant teacher and a fairly careful board of trustees, I feel that the adoption of the plan has done very much to lessen at least the tangible proofs or signs of that moral leprosy which is far too common among our youth.

In conclusion, I earnestly rejoice that the Department has taken this matter in hand, and I feel deeply that your circular is quite the most important step which has been taken for many years. I know that we inspectors have often felt that we were fighting a battle (in these matters) almost singlehanded, and against influences which we could not overcome, and not only will your circular have roused us to a keener realization of our duty and of the necessity for performing it thoroughly, but it will make us feel that we have actively arrayed with us (and let us hope that it may be in some way which will be *felt* throughout Ontario) all the influence and power of the Department, without which we cannot do much, but backed fully by which there is but little which we cannot accomplish.

COUNTY OF SIMCOE, SOUTH.

Thomas McKee, Esq., Inspector.

Teachers.—The teachers in this inspectorate are healthy and robust as a general rule. I have only reported four as in inferior health. One of these has been teaching over thirty years, the other three I believe owe their troubles to hereditary causes. The reasons why the health of our teachers is good are that their constitutions are good, and that they take plenty of systematic outdoor exercise. I don't think that the teachers of this inspectorate suffer to any appreciable extent from inferior ventilation or the unsanitary condition of the school-room, neither do I think, so far as my experience goes, that the diseases specified are in any way peculiar to the teaching profession. There can be no doubt, however, that any isolated cases can be mitigated by school authorities exercising greater care regarding sanitary conditions.

Pupils.—I don't think there is any increase, so far as my schools are concerned, in cases of near-sightedness or deafness, and any cases we have, are, I believe, to be attributed to other causes, rather than to defective lighting in the school-rooms. The same or a like remark is true in regard to curvature of the spine, rounded shoulders and other physical defects. We are not much troubled with overcrowding, however, and only to a trifling extent with inferior ventilation. We exercise every precaution and take every means possible to prevent or remove such a state of things. We encourage outdoor sports and exercises both on the part of girls as well as boys.

Schoolhouses.—In most of our schools, provision is made for the regular sweeping scrubbing and whitewashing by the trustees. Some, a considerable number, are veneered with wood and don't require whitewashing. The number of the schools left to the teacher

to keep clean is every year becoming less. I find the trustees and teachers with very few exceptions, ever ready to co-operate in procuring as great cleanliness in the school room as possible.

School Grounds.—In the majority of school sections, the trustees, as well as the teachers and pupils, take a laudable pride in having and keeping the school premises clean, tidy and comfortable, as well as ornamented. There are a few yet without trees or flower beds, sheds or proper water-closets, but they are every year becoming less in number. I encourage and insist on the part of the teachers for constant supervision of all the school surroundings, especially the closets.

Grading of Schools.—In grading I have placed thirty-two in class one. In this class the schools are fully up to the regulations in size and neatness, the seating is graded and comfortable, the maps, blackboards, etc., modern and amply sufficient, the walls clean and ornamented, the grounds ample and well cared for, and ornamented with trees and flowers, and the closets sweet and sufficient, with screens. In addition to all this, in order to rank in grade one, the gates and fences and sheds must show that some one looks after them.

In class two, I rank thirty-eight or those that are inferior in some one or more of the above requirements,

And in class three, fifteen or those that are altogether lacking in inside or outside accommodation.

COUNTY OF SIMCOE—EAST, AND WEST MUSKOKA.

Isaac Day, Esq., Inspector.

"Are the teachers subject to any special disease?" There are only four or five teachers that have made teaching the work of their life. These, without exception, are enjoying just as good health as any other class of persons of like age. Of course they take regular exercise outside, either in walking or working in the garden or around the house. This seems to show that teaching need not be unhealthy work. The average age of the teachers in this district is about twenty-four. This means that very few of them are making teaching their permanent profession. Most of them leave before one can judge as to whether their health has been impaired or not. When robust and healthy persons enter the school-room, it takes a long time for an impure atmosphere to effect them seriously. Although all teachers will admit the necessity of pure air and exercise, yet few of them have regular times and places for exercise. Were it not that they live in the country, and are therefore obliged to take some exercise, the ill-effect of the school-room might be more easily seen. I do not think that teachers are nearly as careful as they might be as to the kind of atmosphere they shall breathe in the school-room. It is a very easy matter to fix the windows so that they may be lowered, and to arrange that no draught shall take place. Few of the teachers, however, do this, or try to induce the trustees to do so. My opinion is that if the teachers wished they could so regulate their exercise and their school-room that they might enjoy just as pure air as many hours per day as any other class.

Pupils.—As may be seen from my report, but few pupils in the country use spectacles—not more now than ten years ago. Were the parents able, or did they see the necessity of procuring spectacles, they would get them. In many cases I have seen where spectacles would have been beneficial. They were not gotten because the parents could not afford it. Children's eyes are as good now as ever they were. The school life has not the bad effect on them that many think.

Spinal curvature is often heard of, but I have never yet seen a case of it in the rural schools. Sometimes I have seen cases where the children had rounded shoulders. These

cases might have been avoided if the pupils, in all cases, had been induced to sit upright and to walk upright. Teachers might do much more than they are doing to induce their pupils to sit properly at the desk.

Most of the teachers think the pupils harder to manage in the afternoon than in the forenoon. The reasons given are that the children need change; they have been confined so long that it has become irksome. Not only do they wish a change of place, but also a change of occupation. Again the more or less vitiated atmosphere has caused this restlessness and prevented the attention so easy to engage in the early hours of the day.

Schoolhouses.—Sweeping is done in all the schoolhouses every day, but in many cases it is done by the teacher or the pupils. In fact, so great is the competition now among teachers to get schools that I have known them to offer to light the fires and sweep the floor in order to induce the trustees to engage them, so that I believe this evil is on the increase.

I am glad to be able to report that so many of our schools are now supplied with good desks and seats. Less than eighteen per cent. of the schools in this division have now the old cumbersome, torturing desk and seat of a few years ago.

The scrubbing is regularly done once a year, sometimes oftener. In some cases by the pupils and teacher on Arbor Day, or some other holiday; but in most cases the trustees engage persons to do it. About seventy per cent. of the schools were not whitewashed in the year 1895. Many of the schools were never whitewashed. Many of the new schools are now being sheeted with pine and painted instead of being plastered. In some cases the plaster is being taken off the old walls and sheeting is being put on.

Outhouses, Grounds, etc.—I do not know whether the experience of others has been the same as mine, but I do know that no other part pertaining to the school suffers from the neglect that the closets do. Often I find them full of snow. Very few of them are regularly disinfected. Only twenty per cent. of them are screened, not five per cent. of them have walks. Some of the schools are not furnished with shovels that paths may be made through the snow to them. I have never neglected to call the attention of the trustees to the closets, but so little attention was paid to my report in this respect that for the last year where the closets have been in an unsanitary state I have threatened to call the attention of the Board of Health to them. This, in many cases, has been successful. I do not see, however, that this matter can be regulated until Trustees see that it pays financially to keep good closets. If so much of the grants could be applied so that those having the best closets should have the greater grant, I have no doubt that in a short time the outhouses and closets would be improved. Only twenty per cent. of the rural schools in Muskoka have wells in good condition, but it should not be forgotten that thirty per cent. are built on the rock where it is impossible to get wells. In these cases water is carried from the neighbors, or else the well is situated on some contiguous land not belonging to the school.

I have graded the school grounds of the thirty-six schools reported on in Muskoka as follows: None in grade one, thirteen in grade two, and twenty-three in grade three. Of the forty-seven in Simcoe I have placed in grade one only one, twenty-eight in grade two, and eighteen in grade three. When the grounds are such as to provide in the best manner for the pleasure, health and comfort of the pupils, when they are at least an acre in extent, when they are well fenced and have good gates, when they have suitable walks, flower beds and shade trees, I should place them in the first class. When the grounds are less than an acre, but at least half an acre, with most or all of the other requisites mentioned above, I should place them in the second class; and when the grounds are less than half an acre, or when they are not level and suited for play, or when they are unfenced, or when they are in an unsanitary situation, I should place them in the third class.

Many of the schools in Muskoka, in fact not more than twenty-five per cent. are furnished with woodsheds, but in Simcoe not more than nine per cent. are without them.

I am very glad that this means has been taken of calling attention to those things pertaining to the school life that I fear are too often neglected, and yet at the same time

are of just as much importance to the physical and moral nature of the children as is the strictly intellectual side of the school life. Teachers and other school officers too often think that all they should care for is the progress of the pupils in their studies. There is something behind this that the intellectual, to be of any effect, must be based on, viz.: a healthy body; and even if the body be healthy and if the intellect be as strong and acute as it can be, if the whole be not based on morality, the school life is vain. The effect of a good, well ventilated, pleasant and clean, school-room, ornamented with pictures and drawings on the blackboard, and more than that ornamented with the pleasant smile of the teacher must refine the nature of the child. Not less effective will be the school grounds and surroundings. If they are large enough for the boys to compete for the mastery against their fellows, the nature of the boy will be tempered and moulded. He begins to know his own powers and to learn the powers of others. He is learning one of the great lessons of life—how to live as a social being. If these games be carried on under the eye and with the assistance of the teacher, the effect will be much greater for good. Organized plays for girls will serve similar purposes. Again, the effects of well-kept flower beds, of good walks, fences, and tastefully arranged grounds cannot be estimated, but that the effects will be real and substantial in the greater refinement of the pupils no one can doubt.

COUNTY OF VICTORIA, EAST.

J. H. Knight, Esq., Inspector.

Teachers.—As only twenty-five days are reported lost by sickness, and in each case the teacher said it was not due to any school-room defect, I do not think the schoolhouses are much to blame.

I have classified the health of teachers according to their own statement. If I had used my own judgment I might have put some a little lower, but not many.

Pupils.—Only four pupils wore glasses at my visits. I wish the question had been how many have defective eyesight? A great many pupils cannot see to read from the blackboard at a distance of twenty or thirty feet. Such children ought to wear spectacles.

Eight pupils are reported as of defective hearing. These cases are not all bad ones. I have known cases where the teacher had difficulty in making the pupil hear; but such instances are rare.

Thirty-five complain of headache. Most of these are only occasional.

Only one organized sporting club is reported, but teachers report that five matches have taken place. The weak point of clubs and matches is that a few experts do most of the playing. I think it much more important that as many as possible should play, whether they are likely to become skilful or not.

Eleven cases of epidemic diseases are reported. Probably this is over the average. The schools suffer much on this account. As long as one doctor puts up a placard and another takes it down, this will continue. One medical man says a disease is infectious, another says it is not; and while the medical men are disagreeing the patients are dying.

Schoolhouses.—Most of the schoolhouses were built for a larger attendance than now exists. In a few cases the attendance has increased. Ten reported cubic contents below regulations. Of these not more than five are too small except when the attendance is unusually large.

Of the schools not whitewashed in 1895, eight have painted ceilings, and one is oiled, the ceilings being constructed of matched lumber. This system works well, provided the paint is not too dark a color.

Of the fifteen not scrubbed in 1895, one has a new hardwood floor, laid this year.

Thirteen schools are not swept every day. I would recommend that trustees be required to pay for the daily sweeping of the schoolhouse, and that every school floor be scrubbed once a year, and where the attendance is large, twice or more.

I find trustees more willing to make improvements than formerly. Very often when I report that hardwood needs painting, at my next visit I find it has been done. This would not be the case a few years ago.

There are seventeen cases of defective seats. In most cases the desks are of good pattern, but they are too high for the smaller pupils. I think this will be remedied.

The blinds are insufficient in twelve cases. The absence of blinds is very rare, as I have paid great attention to this matter; but I have reported whenever all the blinds did not work satisfactorily.

I wish all the windows were on weights. I prefer it to structural ventilation where there is not a caretaker. Windows can be opened at intermissions.

The Special Report says, "Are stoves and pipes in good repair and cleanly?" The Summary says, "Are stoves and fixtures in bad repair?" I have reported nine such. Generally it is the pipes need cleaning.

School Grounds.—Only four have walks where required, that is, from the gate to the door and from the door to the closets. This should be changed at once.

There are 501 shade trees, which is nearly twelve to each school on an average. Probably nearly as many have died. Most of the trees are maple. I wish they would plant evergreens instead.

In almost every school the girls' closets are cleaner than the boys, showing, not that boys are naturally less cleanly than girls, but that in almost every school there is at least one boy with impure instincts. Female teachers very seldom trouble themselves about such things, and therefore are not a success in large schools.

I have reported thirty-four schools with closets in good condition. I mean that they are clean and in good repair. The screening and providing walks will take time unless pressure is used.

Three schools use a basement in lieu of a woodshed. As a matter of economy the trustees generally provide a woodshed.

Five schools have only a quarter of an acre of land. In each of these cases the attendance is small, and there is a good fence. At Kinmount S.S. No. 3, Somerville, there are two departments and only three-eighths of an acre. The lot is triangular in shape with streets on two sides and buildings on the third side. The trustees cannot enlarge, and to change the site, which is on a hill and very healthy, might be a disadvantage. Three sites are of one acre each, three are three-quarters of an acre each, and all the others half an acre.

Grading of Schools.—To be graded excellent, a schoolhouse must be large enough, well built, easily warmed and ventilated, clean and well furnished.

To be graded excellent, a site must be large enough, well fenced, level and fit for a play ground, high and well drained, planted with trees and provided with suitable out-buildings.

General Summary.—The two greatest dangers to the health and well-being of pupils are bad warming and bad lighting; and the carelessness of teachers is generally the cause. Sometimes pupils are shivering with too little heat, but more frequently the damper of the stove is not closed soon enough, and to lessen the heat windows and doors are opened, to the great peril of those who are exposed to the draft. It is worse still where the walls and windows are imperfect.

In the matter of light, the blinds are generally allowed to cover half the window, whether the day be bright or cloudy. The result is that on a dark day those pupils who need a strong light are straining their eyes in the dark. On a bright day pupils are suffering with the sun in their eyes. More pupils suffer from these causes than from bad ventilation.

COUNTY OF VICTORIA, WEST.

Henry Reazin Esq., Inspector.

Teachers.—Owing to the immense output annually of third class teachers, who must and will teach at any salary underbidding experienced teachers, few teachers are allowed to remain long in the profession. A dozen would nearly count out all my teachers of 5 or 6 years' experience. Hence my teachers are nearly all young and healthy, only one Mr. John Oundal, has *neurotic* trouble, he has taught 22 years. One is affected with phthisis, but he was affected before going into his school. Two are nearsighted (ladies) but they were always so. None has bronchitis.

Pupils.—But for epidemic diseases I should have almost a clean sheet on this subject. Our children nearly all come of healthy parentage. English, Irish, Highland and Low-land Scotch.

In the second place our country is high and healthy, consisting chiefly of the watershed between Lake Simcoe and Georgian Bay on one side and the waters of the Trent Valley on the other side. In the third place our schoolhouses were mostly built under the superintendence of an architect and are consequently well lighted, well heated and well ventilated. I scarcely once a year see a pupil wearing glasses. Our pupils are remarkably free from physical defects, and I do not know of a single case either caused or aggravated by attendance at school. All teachers encourage out-of-door sports for boys and many of them for girls as well. No opportunity is lost to urge the importance of such exercises for girls as well as boys. In one school the girls have their own football club. Baseball and football are the prevalent sports.

Schoolhouses.—The schoolhouses in my inspectorate have nearly all been renewed during my incumbency, and I fortunately from the very first insisted upon brick buildings, and the employment of an architect by the trustees. Hence our schoolhouses are well heated, well lighted, well ventilated and well seated. Sweeping is never neglected. The schoolhouses are generally scrubbed once or twice a year. Very little whitewashing is done except in 3 or 4 old wooden buildings. Our most modern buildings are ceiled overhead, painted and varnished.

School Grounds.—Our school grounds are all roomy, high and dry. In Carden, Dalton, Digby and Laxton, many of the premises are not fenced. Being in sparsely settled districts, some of them on rocky land and some of them beside the bush, the trustees have thought it unnecessary to fence them. The construction and sanitary condition of the closets are the greatest difficulties I have to contend with. I notice some improvement in this respect, still in many cases the water-closets are little better than breeding places for the germs of disease. The only thorough remedy I know of is one suggested in my report some years ago. Have plans and specifications with dimensions of a *closet for rural schools* prepared by an architect for distribution amongst trustees. Give inspectors power and instructions to withhold all school grants from trustees who after due notice fail to provide their schools with the regulation water-closets or their full equivalent.

Grading Schools.—In a former report I made the suggestion, that inspectors should be empowered to divide their schools into three classes as to literary standing, results, equipment, sanitary conditions, etc. I still think it would add greatly to his power to improve the sanitary conditions of the schools. My three classes of school buildings correspond with the number respectively of brick and stone building, frame buildings and log buildings.

COUNTY OF WATERLOO.

Thomas Pearce, Esq., Inspector.

Teachers.—The rural school teachers in the county of Waterloo, are as a rule healthy, vigorous men and women. Owing no doubt largely to our excellent schoolhouses, there is seldom any time lost on account of a teachers' illness. I cannot report any disease peculiar to the profession here. I hear of sore throat, not at all serious, complained of from time to time, but bronchial and neurotic trouble appear to be rare.

Pupils.—I have not noticed any change in the use of spectacles during the last ten or fifteen years; only three-fifths of one per cent. of the pupils wear glasses. Defective hearing is much more common, but I do not believe either defect is chargeable to conditions in or about the schoolhouses. There is not one instance of overcrowding in the rural schools in the county. The school-rooms are commodious and the regulation requiring an additional room and teacher when the average attendance is over fifty is strictly enforced. Country boys and girls, speaking generally, have to assist at home morning and evening, besides walking to and from school, so that games in the play ground to develop muscle are not in my opinion so much required in our rural schools as drill and calisthenics and the training of children to sit upright in their seats, mainly with the view of improving their carriage and gait and preventing round shoulders. The slouching walk and lolling reclining habit in the seats are permitted in far too many of our schools.

Schoolhouses.—Number of rural schoolhouses, 80. Number of rural school departments and teachers, 102. A dirty untidy school is rarely seen in this county. Sweeping daily—in a few schools every alternate day—by a person employed for the purpose, is the rule. Scrubbing and whitewashing receive attention when required. In a number of the schools reported as not whitewashed in 1895, the walls and ceilings are painted. The windows in over half our schools are on weights and nearly all the remainder have stops or catches attached to the sashes. Of the 80 schoolhouses, 27 have basements and are heated by furnaces. In about two-thirds of the schools the only ventilation is by the windows and doors.

School Grounds.—The grounds are, in a sanitary sense, well situated, well fenced and with few exceptions neatly kept. In 48 sections there are wells on the premises, in 24 there are wells or springs close by, and in 8 the water supply is unsatisfactory. Only two sections are without woodsheds or other covering for the wood. In only 7 sections is the area of the grounds less than the regulation requirement.

General.—The ratepayers of the county of Waterloo, are certainly to be congratulated upon all matters along the lines of this report. If the various other aspects of our educational status were as satisfactory as the health of our teachers and pupils and the sanitary conditions of our school premises, the county would, to-day, occupy a very enviable position in this province.

COUNTY OF WELLINGTON, NORTH.

David Clapp, Esq., Inspector.

As the teachers change in this inspectorate once in every three years, their health is not undermined by the sanitary condition of the schoolhouse. They do not remain long enough in the profession to suffer from any disease peculiar to it. It will be seen from the report that not many of the rural schools have made any structural provision for ventilation. Then, too, very few of the teachers either have any fixed place for recreation, or take regular exercise. A very large percentage have no interest in the plays of their pupils, nor do they organize clubs, or arrange matches with neighboring schools.

It is a noticeable fact that more pupils wear spectacles now than formerly, due to a variety of causes. The parents are better able to provide for their children, and the old prejudice against their use is dying out. The need of those with defective vision is better understood than formerly, and the fine type, badly printed page, and color and quality of the paper of the text-books are a prolific source of eye trouble. To these may be added, in some cases, badly lighted school-rooms, faulty desks, and the want of proper blinds to shut out the full glare of the sun.

In nearly all the rural schools no provision is made for sweeping and dusting the school-rooms. Either the teachers or the children do this work, and the former very frequently bind themselves, not only to sweep the room, but to kindle the fires. In sixty-eight rural school buildings, twenty-six were not whitewashed once, nor seven scrubbed during 1895. At the annual meeting the letting of contracts for this work should be in the order of business under section 19. It might be arranged for in this way :

(d) Letting of contracts for firing, sweeping and dusting schoolhouse.

(e) Letting of contract for scrubbing, whitewashing, cleaning well, disinfecting and keeping closets in good condition.

(f) Miscellaneous business, etc., etc.

The school grounds have as a rule been well selected, but not many of them have other than natural drainage, nor are they cared for as they should be.

Very few of the closets have screened approaches, and some of them are an abomination of filthiness. During the winter season many are snowed under, and I have had the sanitary officer on tours of inspection. The trustee boards are removing these buildings from the fence corners, and are erecting porches to keep out the snow. We have had a large number of good shed buildings erected of late years, and many more thoroughly renovated and rebuilt. There were but few woodsheds in this inspectorate in 1895, but now all but fourteen have them, and a number will be erected in 1896.

Good steady progress has been made by trustee boards, but much remains to be done. I have oftentimes been aided in my work by the boards of health, who are anxious that the school-rooms and their surroundings should be kept in a healthful condition.

COUNTY OF WELLINGTON, SOUTH.

J. J. Craig, Esq., Inspector.

From the fact that sixty-five out of sixty-nine rural school teachers report themselves in excellent health, it may fairly be concluded that very few of them in this inspectorate are being injured by the unsanitary condition of the schoolhouses. There is, however, no doubt that a lack of a proper system of ventilation is a serious defect in most of our rural school buildings.

In only two or three schools is there anything like a structural system of ventilation. These have furnaces in their basements.

The trustees generally are most anxious to introduce a good system, and if the Department will undertake to furnish a feasible plan of ventilation for an ordinary school-room, heated by a wood or coal stove, there will be no difficulty in having it adopted in nearly all the schools in this division of this county.

Five or six years ago I received a plan from a gentleman supposed to be an authority on this important subject. The trustees of one section, at considerable cost, had the system placed in their school, where it still remains, an unsightly monument of the designer's abilities. Its efficiency is problematic.

Abundant proof is afforded that the eyesight of the pupils has not been seriously impaired by defective lighting, when the statistical report shows that of over 2,300 pupils present at inspections, only eleven wore glasses.

I regret that a few of our schools still have very inferior seating accommodation, but I trust that at a very early date this, the chief cause of spinal curvatures, etc., will be removed.

Whilst there are actually no organized athletic clubs in any of our rural schools, football, baseball, or lacrosse is played at all of them.

There is not one school which is not swept at least three times a week.

In several of the buildings the ceiling and the walls have been painted; in other cases the buildings have been up only a year or two, hence the answer *re* whitewashing in the statistical report is misleading. Little fault can be found with the irregularity of the whitewashing, scrubbing or sweeping.

In the majority of cases a caretaker is regularly engaged.

The grounds for the most part are on very desirable sites, and most of them are sufficiently large in area. They do not, however, receive that care and attention that is so necessary to render them neat and tidy. Seventeen of these grounds are in an exceedingly satisfactory state; twenty-eight of them could, with a slight expenditure, be made very suitable for the purpose for which they are required; whilst eighteen of them are so small, or their surface is so uneven, that they are wholly unfit for play-grounds. With ten exceptions, the fences are in fairly good order, and the planting of trees has been general throughout the inspectorate.

Every school in this inspectorate has two closets. In many sections both are screened, and in nearly every section the girls' is screened. With very few exceptions the closets are clean, but the old pit system is still in use. The dry earth has been adopted in several sections, and as I am, in every report to the trustees, endeavoring to impress upon them the urgent necessity of paying special attention to the state of the closets, I have every expectation that shortly nothing will be wanting on this head.

Schoolhouses.—There are only three frame buildings, the remaining sixty being brick or stone.

The schoolhouses graded excellent are very neat and commodious structures, fully equipped with good blackboards, modern furniture and apparatus, and rendered attractive by suitable mottoes and pictures hung on the walls.

The grounds graded excellent are each not less than one acre in extent, well fenced, and well supplied with shade trees, have good wells, screened closets, and separate play-grounds.

COUNTY OF YORK, NORTH.

A. B. Davidson, Esq., Inspector.

Teachers.—In my statistical report you will see that of the fifty-nine teachers, seventeen describe their health as excellent, forty-two as good and none inferior. No teacher ascribed any sickness he or she may have had to schoolhouse defects. Certainly no disease peculiar to the profession has manifested itself in this inspectorate. A few old teachers suffer from nervous irritability, and just as many of the same class suffer for want of stimulating interest in their work, or more properly their schools suffer. The school conditions under which all the teachers in this district carry on their work are certainly not unfavorable to health with perhaps one exception, and in this one case a remedy is assured, as the trustees are preparing to build a new schoolhouse this summer.

Pupils.—In a school-attending population of about 5,000, twelve wear spectacles, thirty are more or less deaf, ninety are weakly, ninety-four complain of headaches and twelve take little or no interest in play. In no case could I learn that the schoolhouse was the exciting cause of any of these ailments. In the matter of headaches, as far as the schoolhouse is concerned, I believe they were more likely to be due to the temperature

at which the room is kept, than to any defect in the ventilation of the building as only three of the houses are reported as being without structural provisions for ventilation. There is a very general lack of interest among the teachers in the children's games, sports, etc. Most of the teachers consider it no part of their duty to supervise the play ground, organize their sports, restrain the rude and encourage manliness in their games. As a rule they take an exceedingly narrow view of their relation to their pupils. The "Domsie" type of school-master is very rare in our public rural schools.

Schoolhouses.—All my schools are large enough, and with one exception all are comfortable. Seventeen are not swept daily, dusting is never heard of. Some are swept twice or thrice a week, and some trustees bind the teacher to keep the schoolhouse clean. The custom of employing the teacher to sweep the school-room is on the increase, I am sorry to say, due I think to the excessive competition among teachers for schools. I do not think cleanliness is increased by this arrangement, and I think it is hurtful to the influence of the teacher, destroying as it does, in some measure the dignity of the teacher's labor. Scrubbing was done in all the schools once a year with one exception, and in some cases twice a year.

School Grounds.—The school grounds are as a rule very good. Fences are well kept in almost all cases. I could report only three as inferior in this respect. Except in one hilly district the wells are in good condition. Walks from the schoolhouse to the gates and to the outhouses are certainly wanting much more than they should be. In regard to site only one is inferior. Invariably the worst feature of the playgrounds is the condition of the closets. In a great many cases they are simply bad. I have to be continually urging and in some cases even to threaten loss of school grant, before I can get trustees to take action in the matter. In this matter many teachers are very careless. If the inspector could readily impose a slight penalty on a school section for neglect in regard to all sanitary conditions, I am convinced great good would result. In one of my townships the Board of Health one year issued an order to all the trustees respecting the closets. On my next round I found a very marked effect had been produced and the conditions were much improved. A few years ago much activity was manifested in planting trees in the grounds, but of late not much interest is shown. I make requests year by year but with no results. If trustees could be got to attend the school when the inspector makes his visits, even if their attendance was only at one of his visits, I am persuaded it would result in much good to the school. The inspector could go over all matters affecting the school with the trustees, and help them to a higher conception of the work of the school and a more accurate knowledge of its needs.

COUNTY OF YORK, SOUTH.

D. Fotheringham, Esq., Inspector.

Teachers—Their health: In the seventy-three rural schools of South York forty-three male teachers and thirty-nine lady teachers are employed. Their ages range from eighteen to fifty-one, and average twenty-eight years.

The length of service is from three months to twenty-nine years, and averages 6.5 years.

Twenty-one teachers lost during the year, ninety-one days through illness, the cause of which was in no case attributed to defect in school-room conditions.

Measles were epidemic in twenty-seven sections. Some of the teachers were laid aside by that disease, while one lost thirty days through eye trouble.

Thirty reported health excellent, forty-nine good, and three inferior.

On the whole, the health of our teachers in rural schools and their care of it must be reported highly satisfactory, and no one type of disease has, during ten years of observation, indicated any special trend in the profession, unless two or three deaths from phthisis, one from heart failure, one from brain paralysis and one from peritonitis could warrant a general conclusion.

Sixty-nine teachers take regular exercise, and all teachers of experience give careful attention to ventilation and temperature in the school-rooms.

Pupils.—Twenty-five in 2,761 pupils present at inspection were found using glasses, but many were found using their eyes within a few inches of books or slates, and the impression formed was that teachers and parents are largely indifferent as to the care of the eye.

Even more common than the habit of using the eye with too short a range of vision is the vicious one of sitting with one shoulder propt by the desk and the spine distorted. These pernicious habits are directly due to the lack in most schools of properly graded and properly constructed desks and seats.

It is pitiful to see the unavoidable contortions and distress of tender children on their wretched seats, constructed, many of them, twenty years ago, without props for the feet or bracing power for the spine, level and glossy, so that much of a child's energy is spent on poisoning or regaining the regulation posture.

As a rule schools have abundance of light, and the seating is so arranged that it falls over one shoulder or both, but in thirty per cent. of the schoolhouses its strength cannot be regulated from lack of suitable blinds. In these the sun will for hours pour his beams on the heads, books and desks of those sitting near the windows. Permanent injury to eyes and nervous system must follow such exposure.

In response to constant reminders many boards of trustees have remedied this defect, but still there are twenty-three boards stolidly indifferent on this matter.

One school in five has a baseball or football club, and twenty-seven matches were played by them in '95.

It is to be regretted that the sports of school children are not as much under systematic and intelligent control as are their studies indoors. Their influence in the development of character and true manhood cannot be ranked second to these and yet most teachers spend the recess and noon hour largely in planning class and seat work while this wide and important field for discipline in self-control and physical and moral development has hitherto with rare exceptions been left uncultivated, and instead have grown many a rank weed of tyranny and passion, vulgarity and profanity.

Houses.—In South York schoolhouses are mostly substantial, roomy and comfortable. Twenty rank as first-class, forty-eight as good, and only five as inferior. Sixty-one are brick, one stone, and eleven frame.

The regulation air-space (250 cubic feet for two-thirds of the population from five to sixteen years of age) exceeds the requirements by enough for 2,270 more, that is, there is now provided double the air space that the Education Department makes obligatory. Not a cubic foot of air too much have we in any school—not enough, for the comfort and health of children and teachers. This would seem to show that public opinion is wiser than our legislators on this point and should lead to more liberal provision for pure air to each child, especially when it is known that four times as much is secured for British soldiers in barracks.

Only three schools are defective by the present standard.

In the matter of ventilation, three-fourths of the houses are destitute of structural provision therefor, and twenty-one are unprovided with weights to the windows.

In most recently erected houses, reasonable consideration is given to ventilation, but even in these most of the furnaces draw their cold air, at least, in part, from the school-room, and thus the air already breathed and contaminated is heated and returned for consumption.

Sweeping and dusting are better attended to in this inspectorate than formerly. Still, there are twenty-five boards of trustees who think twice or thrice a week sufficient. Little doubt, if it could be done five times for the same money as twice, it would be done five times. It would be unjust to many boards to say that if it were a part of a teacher's duty, the full tale would be exacted. Yet this is true of some. But when a boy or girl is employed at ten dollars a year to do the sweeping and dusting, the pay is so clearly below the standard of reason that the caretaker is left to give, in vulgar parlance, a lick and a promise two or three times a week.

In a few cases, even now, teachers are obliged to attend to this business or pay for it out of their salary. Alternative, another will.

The wholesomeness of frequent whitewashing does not seem to be appreciated by school boards in rural districts, as forty-five were not careful to do this in 1895. A few of these houses are painted on walls and ceiling, and do not need the whitening brush, but for sanitary reasons should be brushed and washed frequently.

The best that can be said of scrubbing schoolhouses, is that it is done at Easter, Christmas and midsummer in some schools. The majority are scrubbed in midsummer only, and nine were not so cleaned at all in 1895.

If ladies occupied seats on school boards, neglected houses would seldom be found. Housewife and motherly instincts would guarantee wholesome and bright school-rooms.

Grounds.—Forty-eight may be classed as to sanitary location as "excellent," and twenty-five as "good."

As to suitability, sixteen are "excellent," fifty "good," seven "poor."

Thirty yards are one acre or over; eleven are three-quarters or over; thirty are one-half acre or over, and two are under one-half. Seven are inadequate according to the regulations, some of these but slightly.

Nearly all yards are greatly improved by cleaning up on Arbor Day, but very few have ever had the furrows of the former grain or grass field obliterated. In some may still be seen the humps and hollows formed by the overturning of forest trees.

Most are relieved of surface water by the natural slope of the ground. Some, a few, are in rainy weather "mud-puddles."

Grading grounds seems to most a superfluous expenditure.

The fences and gates of ten are "excellent." In forty-nine cases they are "good." In fourteen cases they are "poor" and neglected.

Walks are laid in almost all cases except where not needed, from the gate to the house.

The rural schools of South York have 1,850 growing shade trees, an average of twenty-five each.

While a few are naked and forsaken-like, most are well shaded and attractive with many deciduous and evergreen trees interspersed. Many are decorated on Arbor Day with flower beds and trees and shrubbery, most of which, however, come to an untimely and discouraging end while teachers and pupils are enjoying the midsummer vacation.

Closets.—Separate conveniences are provided at every school. Of these, however, many are of the most primitive structure and arrangements. As a rule, they are kept clean in summer, but are seldom in a sanitary condition. From only a few is the soil regularly removed. In most, the place itself and the neighborhood are offensive and dangerous to a large degree.

In times of snow many are inaccessible, both inside and outside. The condition in times of thaw and after it in some is simply indescribable.

The location and screening of the outhouses have received considerable attention of late, so that only in nine cases can much fault be found. Occasionally they were set down within a few feet of the rear of the house, and that sometimes in the direction of prevailing winds, so that in warm weather the open windows gave ready access to offensive and dangerous effluvia.

It is only in a few cases that proper walks to privies are maintained.

On the whole, the prevailing character of outhouse convenience is the most neglected, shiftless, unsanitary and discreditable department of public school equipment.

The regulations of the Department make inadequate provision for comfort, health and morals, and the machinery for securing compliance with these is neither adequate nor promptly available.

Instructions as to size, location, privacy, suitability for age and sex, daily sweeping in summer and winter, and monthly cleansing should be of the most definite character, and be enforced by a health officer who is not afraid to do his duty.

DISTRICT OF NIPISSING.

Rev. George Grant, Inspector.

Besides the schools covered by this report, I have visited and inspected on the same lines ten departments in the incorporated towns of North Bay, Mattawa and Sudbury.

The Public School Departments in North Bay would rank as No. 1 in all respects, as to grounds, building, water supply, heating and general equipments.

Mattawa and Sudbury would rank as grade II., in these respects, Sudbury with somewhat better grounds, rooms and general equipment than Mattawa.

I may say, speaking generally, with regard to the rural schools, that the health of the pupils in the District of Nipissing has been remarkably good. Only one instance of epidemic disease is reported, and that was only measles. No case of sickness has been chargeable to the school-room. The kind of buildings erected are fairly good specimens of the "Rural School," and would compare favorably with those erected in the District

of Parry Sound. Very little has yet been done in the way of enclosing or beautifying the school grounds. The settlements are quite new, for the most part since the opening of the C. P. R., and their first efforts are necessarily and properly devoted to making the building itself comfortable for the children.

In this report five schools are classed as not whitewashed in 1895. Four of these are either new buildings or finished with dressed and matched lumber, and consequently not requiring to be whitewashed.

The same difficulty as in Parry Sound exists in Nipissing with respect to the water supply, viz. ; the universal presence of the rock. Two schools are reported with "well in good condition," other three procure the supply from springs near by ; but not on the school premises.

DISTRICT OF PARRY SOUND.

Rev. George Grant, Inspector.

The condition of the schools in Parry Sound town, and the incorporated villages of Burk's Falls and Sundridge, is all that could be desired. The buildings are new, the rooms large and convenient, and the equipments of the best modern style.

In regard to the state of the rural schools, in general, I may say, that although many of the schools are far from being in an ideal state, as to sanitary conditions, yet there are few, if any, harmful results accruing to the children from the condition of the school-houses, or their surroundings.

(1) Because the settlement in most of those cases is so sparse that there is nothing like overcrowding in these schools. In a great many of the worst conditioned schools the attendance hardly ever rises above eight or ten pupils, and often falls as low as three or four.

(2) The pupils come from poor homes, compared with which, the schoolhouse, bad as it is, is comparatively a place of comfort.

(3) Many have to work before and after school hours, and many more have to walk long distances to and from school, and so get abundance of fresh air and exercise.

The conditions of the children, both in and out of school, are altogether different from those in crowded centres, or even in older or more popular settlements.

In regard to some of the items in this report :—

(1) We report fourteen schools out of the forty-one as having a well in good condition. In many cases the schoolhouse stands on rock, and it is impossible to get water on the school grounds. Rock underlies the soil of the whole territory, and in many places crops come up so near the surface that good wells are very difficult to get, and for the same reason shade trees are an impossibility in many cases ; but in almost all cases good water is obtained from either a neighboring spring or from a well within reasonable distance from the schoolhouse.

(2) Again, we report twenty-four schools not whitewashed, but seventeen of these are buildings either new and fresh, or buildings ceiled with matched and dressed lumber, which is far more elegant and tasteful than the old style of lath and plaster. The whole is oiled or varnished and of course never requires to be whitewashed.

(3) Nine cases of epidemic outbreaks—four of these were slight outbreaks of diphtheria, that were at once stamped out by the sanitary board provided by law—and the other cases were such mild diseases as chicken-pox, measles, etc.

On the whole the health of the pupils and teachers has been highly satisfactory, as the report shows.

*APPENDIX K.—TECHNICAL EDUCATION—MECHANICS' INSTITUTES
FREE LIBRARIES, ART SCHOOLS AND SCIENTIFIC INSTITUTIONS.*

REPORT OF S. P. MAY, ESQ., M.D., C.L.H., SUPERINTENDENT OF PUBLIC
LIBRARIES, ART SCHOOLS, ETC.

1. *Mechanics' Institutes.*

SIR,—I have the honor to submit herewith my report on the Mechanics' Institutes, Free Libraries, Art Schools and Scientific Institutions, receiving a share of the Government Grant, in the Province of Ontario for the year ending 30th April, 1895.

At the present time there are 348 Mechanics' Institutes, Free Libraries, Art Schools, and Scientific Institutions receiving Government aid in operation in this province.

For the year ending 30th of April, 1895, the following institutions reported :

289	Mechanics' Institutes.
12	Free Libraries.
7	Art Schools.
7	Scientific Institutions.

Total 315

The following Mechanics' Institutes did not report : Alvinston, Belmont, Blyth, Bothwell, Elmvale, Hanover, Highgate, Islington, Kemptville, L'Orignal, Mayflower (Wisbeach P. O.), Merrickville, Merriton, Molesworth, Ottawa, Petrolea, Saltfleet (Stoney Creek P.O.), Wallaceburg, Walter's Falls, Wardville, Winchester, Windermere.

The following Public Libraries have been incorporated since the 30th April, 1895 : Angus, Bridgen, Drumbo, Kintore, Kinburn, Napanee Mills, North Bay, Primrose, Tamworth, Thedford, West Lorne.

Note—The name Mechanics' Institute, was changed to Public Library, by Act of Parliament, on the 1st of May, 1895.

I inspected the following Institutions during the year : Allandale, Aurora, Barrie, Beamsville, Beeton, Belleville, Belfountain, Belwood, Bowmanville, Brampton, Brighton, Brockville, P.L., Brockville Art School, Burford, Cardinal, Cobourg, Colborne, Cold Springs, Cornwall, Credit Forks, Creemore, Deseronto, Dunnville, Elora, Ennotville, Erin, Fenella, Fergus, Fonthill, Fort Erie, Gananoque, Garden Island, Glenmorris, Grimsby, Hamilton Free Public Library, Hamilton Literary Association, Hamilton Art School, Hillsburg, Iroquois, King, Kingston Public Library, Kingston Art School, Lancaster, London Free Public Library, London Art School, Maple, Merriton, Millbrook, Morrisburg, Napanee, Newcastle, Newmarket, Niagara, Niagara Falls, Niagara Falls South, Norwich, Oakville, Orono, Paris, Picton, Port Colborne, Port Hope, Prescott, Richmond Hill, Rockwood, Spencerville, St. Catharines Free Public Library, St. George, St. Thomas Free Public Library, St. Thomas Art School, Tottenham, Thorold, Trenton, Waterdown, Welland.

MECHANICS' INSTITUTES' REPORT.

The following extracts are taken from the annual reports for the year ending 30th April, 1895. (For details see Tables A, B, C.) :

I. Classification of Mechanics' Institutes, Reporting 1894-5.

Mechanics' Institutes with libraries, reading rooms and evening classes.	30
" " " and reading rooms.....	149
" " " evening classes.....	6
" " " only.....	103
" " " Reading room only.....	1
Total	289

2. Mechanics' Institutes' Receipts and Balances on Hand.

The total receipts of 289 Mechanics' Institutes was.....	\$ 99,686 35
Balance on hand.....	8,607 27

3. Mechanics' Institutes' Expenditure.

The total expenditure of 289 Mechanics' Institutes was....	\$ 91,079 08
--	--------------

4. Mechanics' Institutes' Assets and Liabilities.

Assets of 289 Mechanics' Institutes	\$423,475 87
Liabilities of 289 Mechanics' Institutes.....	14,896 18

5. Number of Members in Mechanics' Institutes.

289 Mechanics' Institutes have 31,195 members.

6. Number of Volumes in Mechanics' Institutes and Number of Volumes Issued.

Number of volumes in 289 libraries	439,456
Number of volumes issued in 289 libraries	687,100

7. Reading Rooms in Mechanics' Institutes.

180 Institutes reporting have reading-rooms.

180 Institutes subscribed for 3,508 newspapers and periodicals.

8. Evening Classes in Mechanics' Institutes.

36 Institutes had 966 pupils in the Commercial, English, and Drawing courses.
Some of the pupils took two or more courses.

The following abstracts show the proportionate number of volumes in each library so far as reports have been received :

Libraries with less than 250 volumes.

Algonquin, Allandale, Alian Mills, Burford, Calabogie, Cargill, Chesterville, Copleston, Creemore, Dalhousie (McDonald's Corners P. O.), Delaware, Delhi, Douglas, Holland Centre, Kars, Little Britain, Logan (Mitchell P. O.), Lucille, Maple, Mildmay, Mono Centre, Mono Mills, Morewood, Morriston, Nanticoke, Pakenham, Richmond, Riversdale, Rockwood, Spencerville, St. Vincent (Meaford P. O.), Sundridge, Thessalon, Tweed, Violet Hill, Wheatley.

Libraries with over 250 and less than 500 volumes.

Admaston, Atwood, Belwood, Bervie, Brougham, Cheapside, Clarksburg, Cobconk, Courtright, Dresden, Dutton, Emsdale, Enterprise, Fenella, Floradale, Fordwich, Glen Allan, Hastings, Hillsburg, King, Kirkfield, Lakefield, Little Current, Melbourne, Millbrook, Milverton, Oil Springs, Omamee, Plattsville, Queensville, Rat Portage, Rodney, Shedden, Springfield, St. Helen's, Sunderland, Underwood.

Libraries with over 500 and less than 1,000 volumes.

Alliston, Arnprior, Beaverton, Bognor, Burk's Falls, Burlington, Camden East, Cardinal, Chesley, Claremont, Coldstream, Cold Springs, Dufferin (Glanbrassil P. O.), Dungannon, Erin, Ethel, Flesherton, Gore Bay, Gorrie, Gravenhurst, Hagersville, Hensall, Highland Creek, Huntsville, Inglewood, Irquouis, Kingsville, Lake Charles, Lancaster, Leamington, Manilla, Manotick, Midland, North Gower, Orono, Oxford Mills, Palmerston, Parkhill, Parry Sound, Pembroke, Pickering, Picton, Port Carling, Port Colborne, Port Perry, Port Rowan, Romney, Russell, Sault Ste. Marie, Schreiber, Shelburne, Sparta, Stayner, Tara, Thamesford, Thornbury, Tilbury, Tilbury East (Valetta P. O.), Tiverton, Warkworth, Waterford, Westford, Williamstown.

Libraries with over 1,000 and less than 1,500 volumes.

Arkona, Athens, Beamsville, Belfountain, Bradford, Brighton, Caledon, Caledonia, Cannington, Chappleau, Cornwall, Deseronto, Duart, Dundalk, Essex, Forks of the Credit, Ganacque, Georgetown, Glencoe, Glenmorris, Grand Valley, Holyrood, Jarvis, Lion's Head, Listowel, Markdale, Morrisburg, Newburgh, New Hamburg, Newmarket, Norwood, Port Arthur, Ripley, Tavistock, Tilsonburg, Toronto Junction, Tottenham, Trenton, Vandorf, Victoria (Caledonia P. O.), Waterdown, Watford, Woodbridge, Woodville, Wyoming.

Libraries with over 1,500 and less than 2,000 volumes.

Abrarder, Ailsa Craig, Aurora, Baden, Beeton, Blenheim, Bobcaygeon, Bolton, Braebridge, Brussels, Clatsworth, Cheltenham, Claude, Cobourg, Drayton, Fonthill, Fort Erie, Lucan, Lucknow, Markham, Meaford, Mono Road, Niagara Falls S., Oshawa, St. Catharines F. L., Thamesville, Walkerton, Weston, Wiarton.

Libraries with over 2,000 and less than 2,500 volumes.

Almonte, Aylmer, Carleton Place, Clifford, Collborne, Dunnville, Elmira, Ennotville (Barnett P. O.), Forest, Hespeler, Lindsay, Mount Forest, Oakville, Orangeville, Port Elgin, Renfrew, Richmond Hill, Streetsville, Teeswater, Whitby, Wingham.

Libraries with over 2,500 and less than 3,000 volumes.

Alton, Arthur, Bowmanville, Brampton, Exeter, Fenelon Falls, Ingersoll F. L., Mitchell, Napanee, Orillia, Paisley, Point Edward, Ridgetown, Southampton, Stouffville, Welland.

Libraries with over 3,000 and less than 3,500 volumes.

Ayr, Belleville, Campbellford, Clinton, Durham, Embro, Goderich, Harriston, Norwich, Penetanguishene, Perth, Port Hope, Prescott Smith's Falls, St. George, Wroxeter.

Libraries with over 3,500 and less than 4,000 volumes.

Barrie, Fergus, Kincardine, Niagara, Niagara Falls, Owen Sound, Scarboro', Simcoe, F. L., Thorold.

Libraries with over 4,000 and less than 5,000 volumes.

Chatham F. L., Collingwood, Galt, Garden Island, Grimsby, London, Milton, Seaforth, Stratford, Strathroy, St. Mary's, Uxbridge, Windsor, Woodstock.

Libraries with over 5,000 and less than 6,000 volumes.

Berlin F. L., Dundas, Kingston, Preston, Waterloo F. L.

Libraries with over 6,000 and less than 7,000 volumes.

Paris, St. Thomas F. L.

Libraries with over 7,000 and less than 8,000 volumes.

Brockville, Peterboro'.

Libraries with over 8,000 and less than 10,000 volumes.

Elora, Guelph F. L.

Libraries with over 10,000 and less than 20,000 volumes.

Brantford F. L.

Libraries with over 20,000 and less than 30,000 volumes.

Hamilton F. L.

Libraries with over 30,000 volumes.

II. *Free Libraries.*

The following extracts are taken from the Annual Reports for the year ending 30th of April, 1895 (for details see Table D).

1. *Free Libraries' Receipts and Balances on Hand.*

The total receipts of twelve Free Libraries was	\$65,596 36
Balances on hand	1,023 55

2. *Free Libraries' Expenditure.*

The total expenditure of twelve Free Libraries was	\$64,572 81
--	-------------

3. *Free Libraries' Assets and Liabilities.*

Assets of twelve Free Libraries	\$328,950 21
Liabilities of twelve Free Libraries	106,049 97

4. *Number of Readers in Free Libraries.*

Twelve Free Libraries report having had 67,233 readers.

5. *Number of Volumes in Free Libraries, and number of Volumes Issued.*

Number of volumes in twelve Free Libraries	165,263
Number of volumes issued in twelve Free Libraries	1,000,706

6. *Reading Rooms in Free Libraries.*

Twelve Free Libraries subscribed for 1,384 newspapers and periodicals.

Machine drawing	77	
Building construction	37	
Industrial design	188	
Advanced perspective	50	
		408
Total		20,011

The following medals and special certificates were awarded for the year ending 30th April, 1895 :

Gold Medal.

Presented by the Minister of Education for Advanced Course :—Industrial designs and drawing from the antique, Kathleen Hall, Toronto Art School.

Silver Medal and Certificate.

Presented by the Minister of Education for the best industrial designs (Art Schools), Walter Jeffery, Toronto Art School.

Silver Medal and Certificate.

Presented by the Minister of Education for the best industrial designs (High Schools and Collegiate Institutes), Florence Doughan, Belleville High School.

Silver Medal and Certificate.

Presented by the Minister of Education for the highest number of marks in the Mechanical Course, Harry G. Batten, Hamilton Art School.

Silver Medal and Certificate.

Presented by the Minister of Education for the best specimen of machine drawing from models, Percy Keltie, Hamilton Art School.

Silver Medal and Certificate.

Presented by the Minister of Education for the best original drawings in building construction or architecture, W. Noffke, Ottawa Art School.

Bronze Medals.

For the best painting from life, Marion Living, Ottawa Art School.

For the best drawing from life, Ernest Fosbery, Ottawa Art School.

For the best specimen of china painting, M. Brown, Loretto Abbey, Toronto.

For the best specimen of wood-carving, G. Paigiter, Toronto Art School.

For the best specimen of engraving on wood, F. S. Smith, Toronto Art School.

For the best specimen of modelling in clay, G. Usbourne, Toronto Art School.

For the highest number of marks in Primary Drawing Course (Art Schools and Ladies' Colleges), Sadie Hawkins, Loretto Abbey, Toronto.

For the highest number of marks in the Primary Drawing Course (Public Libraries)-Stuart Fleming, Owen Sound Public Library.

For the highest number of marks in Primary Drawing Course (High Schools and Collegiate Institutes), Fred. W. Andrew, Harbord Street Collegiate Institute, Toronto.

For the highest number of marks in Primary Drawing Course (Public Schools), Herbert J. S. Dennison, Given Street Public School, Toronto.

III. Art Schools and Provincial Drawing Examinations.

1. *The Report of the Brockville Art School for the year ending 30th of April, 1895*, shows that the session consisted of two terms, attended by seventy-three students in the Primary, Advanced and Mechanical Courses. The number of lessons given in the various subjects were as follows: Freehand 58, model drawing 58, perspective 58, geometry 58, memory drawing 48, shading from flat 55, shading from round 58, drawing from flowers 50, ornamental design 50, industrial design 48, machine drawing 48, architectural drawing 48, modelling in clay 35. The number of certificates taken at the annual examination was, 57 proficiency, and two full teachers' certificates.

They had a small number of pupils in the extra subjects, including oil and water color, from objects and life, but this being a manufacturing town the directors considered it of greater importance to encourage mechanics' to study the necessary subjects applicable to their trades and manufacturers, than to devote the time of their teachers in giving instruction in so called accomplishments in fine arts to young ladies. The directors say that quite a number of comparatively uneducated young men have taken a deep interest in the study of practical and advanced geometry, as the basis of industrial design. They have a class for modelling in clay, their work is intended as original models for manufacturing purposes and not mere copies from casts.

Since their last report several of their senior students, owing to their knowledge of drawing, have been employed in different Canadian cities, and others owing to the stagnation of trade have gone to the United States where they have obtained lucrative employment.

Miss Margaret Stewart one of their former pupils who recently won a scholarship and fellowship in the Philadelphia Woman's School of Design, is now in town, and if possible the directors will avail themselves of her services next session.

The receipts, including \$495 Government grant, were \$530. Expenditure, \$499. Balance on hand, \$31.

2. *The Report of the Hamilton Art School for the year ending 30th April, 1895*, shows that the school opened on the 14th September, 1894, and continued open till 30th April, 1895. The number of individual students who attended the school were, eighty-one females and eighty-three males. The number of individual students who attended the different classes were, thirty-six in the day classes, and forty in the general evening classes, sixteen in the technical classes, thirty-eight in the geometry and perspective classes, ninety-two in the Saturday classes. Total entries 222.

The following trades and professions were represented in the classes: Architects, brass founders, bricklayers, carpenters, carriagemakers, cabinetmakers, cartoonists, clerks, draughtsmen, engravers, engineers, embroiderers, electricians, foundry men, lithographers, landscape gardeners, machinists, milliners, musicians, newsboys, printers, saddlers, students, tailors, teachers, tinsmiths, weavers, wood-carvers.

A new class was formed for needle work taught by Mrs. Leith-Wright, late of the Royal School of Art Needle Work, at South Kensington.

The teaching staff were, Mr. S. J. Ireland, Principal, who superintended the work of every pupil in the school, with six assistants.

The following Provincial medals and certificates were awarded to students of this school: Silver medal for machine drawing from actual measurements; silver medal for mechanical course, and the following certificates: Modelling 2, sepia 9, water color painting 2, wood-carving 1, drawing from the antique 12, oil monochrome 1, specific designs 3, architectural drawing 4, machine from actual measurement 4, for the five subjects of the mechanical course 25, for the five subjects of the advanced course 68, for the five subjects of the primary course 89, total awards 224. Citizens gave \$40 and a medal for local prizes, with beneficial results. Four free scholarships were given to the best pupils of the junior fourth grade in the City Public Schools, two by this Board, and two by the Board of Education.

The receipts, including \$558 Government grant, and \$300 City grant, were \$2,903.39. Expenditure, \$2,801 24. Balance on hand, \$102.15.

3. *The Report of the Kingston Art School for the year ending 30th of April, 1895*, shows that the school work commenced on the 1st of October, 1894, with an increased attendance, which was maintained during the session.

Thirty-five pupils attended the day classes, and twenty six the evening classes; the greater number of the latter were those whose interest is desired, viz., apprentices and young men working at the several manufacturing trades as machinists, carpenters, etc. Nearly all of them expressed their intention of continuing these studies, and of influencing their friends to join, so that a large evening class may confidently be expected when the school re-opens in the fall. The curriculum of study laid down by the Department has been followed.

The classes were closed at the end of April, when the Departmental examinations took place.

The directors feel satisfied that the increase will be much larger next year than it has been during this, as additional subjects of interest have been added, and the increase of each year has its influence on the succeeding one.

The receipts, including \$434 Government grant, were \$688.83; expenditure, \$663.35; balance on hand, \$25.48.

4. *The Report of the London Art School for the year ending 30th of April, 1895*, shows that, notwithstanding the great depression in trade that has existed for some time, this school has been fairly prosperous, and the attendance much more regular than for some time previously.

The students have selected those subjects most suitable to their respective trades and professions, instead of taking lessons for pastime or amusement.

During the past few years quite a large number of their students have been earning their own living, either directly or indirectly from knowledge imparted to them in this school. Among these we notice several architects, civil engineers, engravers, lithographers and color printers, wood carvers, etc., and several have distinguished themselves in oil and water and china painting.

A life class was established during the last term, which promises to be very successful.

The financial report shows that the expenditure has considerably exceeded the income, which is accounted for from the purchase of new studies, etc.

The receipts, including \$435 Government grant, were \$631.46 ; expenditure, \$631.46 ; balance due teacher, \$199.33.

5. *The Report of the Ottawa Art School for the year ending 30th of April, 1895*, shows that the school year commenced on the 1st of November, 1894, and closed on the 30th of April, 1895.

The school classes were open every week-day, morning and evening, and on certain days, afternoon classes were carried on under the supervision of a staff of three teachers, Mr. F. Brownell, R.C.A., and two assistants. The total number of students attending during the session was eighty-eight.

Classes were conducted in the primary, advanced and mechanical courses ; also the following in extra subjects, pen and ink studies, oil and water color painting from still life, and nude and draped life.

The class of art needlework which was for some years taught in this school has been abandoned.

At the annual Departmental examinations forty-seven students presented themselves, and were awarded ninety proficiency certificates, together with one silver and two bronze medals.

It is satisfactory to be able to record that the season's work has been marked by vigor and success. The quality of the work done and the interest shown by the students have evidenced steady improvement, while the outside appreciation of the school is shown by the absorption of its students into various phrases of practical work for which its training has in no slight degree prepared them.

The receipts, including \$467 Government grant and \$41.45 borrowed money, were \$1359.81 ; expenditure, \$1359.81.

6. *The Report of the St. Thomas Art School for the year ending 30th of April, 1895*, shows that the classes commenced on the 1st of October, 1894, and ended on the 30th of April, 1895. Fifty pupils attended the classes during the year. The number in each course was as follows : Thirty-four primary, twelve advanced, and eight mechanical course.

The following trades and professions were represented in the classes : Architects, builders, carpenters, cheesemakers, machinists, mechanics, millwrights, painters, plumbers, printers and students.

Three medals were awarded by Mr. MacKay, Chairman of the Art School Committee, for the best work in the primary, advanced and mechanical classes.

The receipts, including \$318 Government grant, were \$735.50 ; expenditure, \$735.50.

7. *The Report of the Toronto Art School for the year ending 30th of April, 1895*, shows that the number of students was 105, embracing representatives of many trades and professions, in which art knowledge is indispensable and remunerative.

At the annual departmental examinations their students were awarded the gold medal for advanced course, silver medal for industrial design, bronze medal for lithography; sixty eight proficiency and three full teachers' certificates in the primary course; thirty proficiency and one full teacher's certificate in the advanced course, and five proficiency certificates in the mechanical course. In addition, cash prizes were given by the Board of Directors, and other prizes of great value were generously presented by manufacturing firms to encourage the development of art and design.

When these prizes were distributed in November an exhibition of school work was made, which called full many expressions of admiration from the numerous visitors.

The directors claim that the classes of this session have been a decided success, that the reputation of the school has been sustained, and the standard of the work has been considerably advanced.

The receipts, including \$495 Government grant, were \$1,269.82; expenditure, \$1,125 00; balance on hand, \$144.82.

8. *The Report of the Ontario Society of Artists for the year ending 30th of April, 1895*, shows that they contributed towards the success of the following Exhibitions:

Arts and Crafts Exhibition, Hamilton.—On closing the spring exhibition of 1894, a large proportion of the collection was forwarded to Hamilton. The attendance was good, and great satisfaction expressed.

Toronto Industrial Exhibition.—The Art Department was as usual contributed by the Society. A good display was made by Canadian artists, and all the space was filled, including that allotted to the art schools and amateurs.

Art Union Exhibition.—During the Christmas holidays the Society held an Art Union Exhibition, which was well patronized.

Royal Canadian Academy—The exhibition was held in the gallery of the Society.

University of Toronto.—A small collection of pictures was loaned for its annual conversazione.

Owen Sound Exhibition.—A collection of about 100 pictures was loaned for an exhibition in Owen Sound.

The Ontario Society of Artists claim the principal credit for all the above named exhibitions, as furnishing the greater share of material and facilities for holding them.

Receipts, including Government grant of \$500, were \$3,673.14; expenditure, \$1,443.76; balance on hand, \$2,230.14.

Scientific Institutions.

1. *The Report of the Astronomical and Physical Society of Toronto for the year ending 30th of April, 1895*, shows that there are three life, thirteen honorary, eighteen corresponding and ninety-eight active members. During the year papers have been read on the following subjects:

Fallacies in Mathematics and Astronomy, T. Lindsay.

Earth Currents, J. Morrison.

Lignefaction of Gases, Arthur Harvey.

The Development and Progress of Areas of Depression, R. T. Stupart.

The South Polar Regions of the Earth, Arthur Harvey.

Comets of Short Period, W. F. Denning.

The Nebular Hypothesis of La Place, J. Phillips.

Spectroscopic Binary Stars, J. E. Gore.

The Transit of Mercury of November 10th, 1894, T. Lindsay.

On a Lens for adapting a visually corrected refracting Telescope to Photographic observations with the Spectroscope, T. Lindsay.

Meteorology, A. Elvins.

Meridian Transit of Mercury, F. L. Blake.

Special Perturbations, J. Morrison.

The Progress of Astronomy in 1894, John A. Paterson.

The Spectre of the Nebulae, A. F. Miller.

Earthquake and Volcanic Phenomena, A. Elvins.

The receipts, including \$200 Government grant, was \$385 90. Expenditure, \$358.27. Balance on hand, \$27.63.

2. *The Report of the Canadian Institute, Toronto, for the year ending 30th of April, 1895*, shows that the following papers were read at the ordinary meetings of the Institute:—

Opening address by the President: Work of the Institute reviewed, Provincial Museums advocated, Prof. R. Ramsay Wright.

The Spirit of National Art, W. A. Sherwood.

Corals, J. J. Hare.

A Notice of Samuel Holland, first Surveyor-General of British North America, Rev. Henry Scadding.

A plea for a Geodetic Survey of Canada, P. H. Hyndman.

Co-operation in England, Samuel D. Mills.

Aboriginal American Inscriptions in Phonetic Characters, Rev. Prof. Campbell.

A Recent Contribution to the Ossianic Controversy, Rev. Neil MacNish.

Art in its Relation to Religion, T. Mower Martin.

The Aurora Borealis—Its Connection with Magnetic Earth Currents, G. G. Pursey.

Aerolites, Arthur Harvey.

The Æsthetic Unity of the Fine Arts, Hamilton MacCarthy.

Raids and Legal Actions in Canada arising from Slavery and the late Civil War, J. C. Hamilton.

Life in the African Jungle, Dr. R. L. Garner.

The Fur Trade from 1784 to 1812, Capt. Ernest Cruickshank.

The Eye Spotted Bud-Moth (*Tonetocera Ocellana*), D. W. Beadle.

Some Principles in Grammar, George A. Chase.

Toxins and Antitoxins, J. J. MacKenzie.

Tea, Coffee and Cocoa (illustrated by the lantern), Prof. W. H. Ellis.

Bimetallism, Prof. J. Mavor.

The Reliquiæ Celticæ, Rev. Neil MacNish.

The University Biological Museum, Prof. R. Ramsay Wright.

A Comparative Study of the Gastric Mucous Membrane, Dr. R. R. Bensley.

The Hinterland of Ontario, Thos. W. Gibson.

Biological Section.

There were ten meetings of the Biological Section, at which seven papers were read :

Evolution in relation to Classification, J. Noble.

Fungi, with special reference to the mushroom, A. Harvey.

Edible Fungi, C. Armstrong.

Alternation of Generations in Plants, J. Noble.

Polyembryony in the Dog-Toothed Violet, E. C. Jeffrey.

The Surinam Toad, Prof. R. Ramsay Wright.

Some Rare Bird Visitors, J. Maughan, Jr.

A considerable amount of attention has been given to the Museum, to which has been added several specimens ; it has also been enriched by the loan of seventeen cases of beautifully stuffed birds.

Historical Section.

At the Historical Section the following papers were read :—

Canada since its discovery by Sebastian Cabot, O. A. Howland.

Reminiscences of Canadian Artists, J. W. L. Forster.

Geological and Mining Section.

Five papers were read at the Geological and Mining Section, viz.:—

Geology and Mineralogy of the Rainy Lake Region, Prof. A. P. Coleman.

A resume of British Hall Mark Laws, and the necessity for such Laws in Canada, Robert Dewar.

The Hinterland of Ontario, Thomas W. Gibson.

A List of Minerals found in Ontario, George Mickle.

The Application of the Microscope to the Study of Rocks, W. E. Boustead.

The Committee on the extension of the Museum and the promotion of a National Museum presented an interim report containing a large amount of valuable statistical information from various countries, the publication of which at present will serve no practical purpose.

The Institute received from the office of the Governor-General copies of correspondence which has passed between the Secretary of State for the Colonies and His Excellency on the proposed unification of Civil, Astronomical and Nautical day.

The invitation to the British Association for the advancement of science was presented to the General Committee at Oxford last year by the President and Professor Ellis on behalf of the Institute and Universities and Colleges, and by Alderman Shaw on behalf of the city. The deputation was cordially received.

Meetings have been held during the past session, which have been well attended by representatives of all public bodies in the city.

A petition presented to the Provincial Legislature resulted in a promise of \$7,500.

The City Council passed a by-law to grant the sum of \$5,000 towards the expenses of the meeting. It was too late to have the proper authority enacted during the past Session of the Legislature ; there will be ample time to secure this during the next Session, as the meeting will not take place for a year afterwards.

A memorial will be presented very shortly to the Dominion Legislature asking for financial support.

Library Statistics.

Books and periodicals purchased.....	32
Books and periodicals circulated.....	1,935
Donations of books and pamphlets received	206
Exchanges received from 540 societies.....	2,611

The receipts, including \$1,000 Government grant and \$700 borrowed from building fund, was \$2,804.64. Expenditure, \$2,754.44. Balance on hand \$50.20. Archaeological fund receipts, \$672.44. Expenditure, \$123.12. Balance on hand, \$549.32.

3. *The Report of the Hamilton Association for the promotion of Science, Literature and Art, for the year ending 30th of April, 1895*, shows that the total membership is 147, and that an increased interest has been taken in the proceedings of the Association during the past session by the members and the general public.

Ordinary Meetings.

The following papers were read during the session.—

The purpose of the Association, President S. Briggs.

Early History of the Indians North of the Great Lakes, Dr. P. E. Jones.

Europe during the past Thirty Years, Rev. J. H. Long.

A Two Thousand Mile Tour to the Land of perpetual Ice and Snow, J. B. Tyrrell

Speech of the Lower Animals, Prof. R. L. Garner.

Early History of Wentworth County, J. H. Smith.

Idyl of a Rambler, H. B. Small.

Battle of Stoney Creek, Douglas Brymner.

Biological Section.

Six regular monthly meetings have been held, at all of which instructive discussions took place relative to the work of the section.

Large and valuable additions have been made to the Herbarium during the year.

Of Canadian wild flowers found in the twelve mile limit, thirty-seven species representing sixteen genera have been added. A valuable collection of Jamaica ferns donated by Mr. Adam Brown, with catalogue of the same, has been placed in the Herbarium. Of these there are 102 species representing twenty-two genera.

The Herbarium now also contains the late Prof. Wright's beautiful and unique collection of 100 Arizona and New Mexico ferns and Pacific seaweeds.

Geological Section.

As a result of this year's work, Hamilton is credited with three new genera of fossil sponges and seven new species.

Mr. A. E. Walker presented to the section a valuable collection of fossils properly classified and named.

The following papers were read and discussed :—

Geological Notes, Col. C. C. Grant.

Opening Address, Chairman.

Notes on the Devonian Rocks, Col. C. C. Grant.

Geological Notes, Col. C. C. Grant.

The Glacial Man Controversy, Col. C. C. Grant.

Short Notes on Recent Discoveries, Col. C. C. Grant.

During the year the Chairman has forwarded thirty-four specimens to the Geological Survey at Ottawa, about 100 to the Geological Survey at Washington, sixty to the Dublin Museum and a large number to the Museum of McGill University.

Photographic Section.

In addition to the regular monthly meetings, outings have been periodically held, and have resulted in a large addition to the local views possessed by the section.

In April, 1895, a four days' exhibit of work done by members of the section was made and proved of great interest to the members of the Association and the citizens generally.

The receipts, including \$400 Government grant, were \$695.85. Expenditure, \$489.75. Balance on hand, \$206.10.

4. *The Report of the Literary and Scientific Society, of Ottawa*, shows an increase of fifty members during the session. The total number of members is now 260.

Lectures.

The Lecture course was as follows:—

Inaugural address, "Some Questions of the Day," W. D. LeSeur, President.

The Deemstry of Man, J. F. Waters.

Carlyle, Prof. William Clark.

Browning's Reading of Euripides, Prof. John Watson.

Champlain, Joseph Pope.

Charles Kingsley, Rev. F. B. Hodgins.

The relation of Agriculture to the progress of Canada, J. W. Robertson

Celestial Mechanics, J. C. Glashan.

Library Statistics.

Books purchased	136
Books presented to the Society	80
Number of books and reports in the library	3,116
Number of members who borrowed books and magazines	258

The books, etc., loaned to members were 267 history and biography; 151 travels and adventure; 4,556 fiction; 15 poetry; 226 essays; 2 geology; 10 chemistry; 103 science and art; 267 magazines.

The reading room is supplied with eleven dailies, sixteen weeklies, and twenty-four monthly and quarterly magazines. Several newspapers are presented to the Society by the publishers and private individuals

Royal Society.

At the last meeting of the Royal Society this Society was represented by the secretary, Mr. F. K. Bennetts, who read a report upon the Society's work for the year.

This Society has been again invited to send a delegate to the Royal meeting of the Royal Society to be held in May next.

The receipts, including \$400 Government grant, were \$1,612.20; expenditure, \$1,397.79; balance on hand, \$214.41.

5. *The Report of L'Institut Canadien Francais de la Cité D'Ottawa, for the year ending 30th of April, 1895*, shows that there are over 300 members. During the year lectures and entertainments have been given on the following subjects:—

Opening lecture, *La Litterature le patriotisme et l'histoire de l'Institute*. Dr. F. X. Valade, President.

La question ouvriere, Rev. Pere Hammond, S. J.

La Comedie, Les Amateurs.

Les Orages, Alph Charon.

La Gymnastique, N. Page et Ariel Co.

Les Volcans, A. Robert.

L'Independance du Canada, Messrs. Vincent et Philion.

La taxe sur les Celebataires, Messrs. Audette et Chagnette.

A literary club for lectures and discussions has been conducted for young people, and a class of over fifty pupils took lessons in German from Professor Drengé.

The library consists of about 300 volumes of English and French literature, and the reading room has forty newspapers and English and French magazines and reviews, and the museum contains about 700 specimens chiefly relating to Botany and Mineralogy.

As this is the only French Literary and Scientific Institution in Ottawa it is liberally patronized by the citizens.

Receipts, including \$400 Government grant, were \$2,253.11; expenditure, \$1,832.11; balance on hand, \$421.00.

6. *The Report of the St. Patrick's Literary Association, of Ottawa, for the year ending 30th of April, 1895*, shows that there were 133 members, and that the evening classes in drawing were attended by thirty-nine students representing the following trades and professions: Bricklayers, bookkeepers, butchers, clerks, carpenters, electricians, machinists, printers, students, tailors and others. The library is well selected and contains 422 volumes, which were well circulated. The books principally read were history, biography, general literature, and religious literature. It is gratifying to state that only six per cent. of the books circulated were fiction.

The library and reading-room, which is largely attended, is supplied with five dailies, seven weeklies, and six periodicals, is open from 6 to 10 p.m., seven days a week.

The receipts, including Government grant, \$260, were \$3,004.55; expenditure, \$901.58; balance on hand, \$2,102.97.

APPENDIX L.—UNIVERSITY OF TORONTO; COUNCIL OF THE UNIVERSITY; COUNCIL OF UNIVERSITY COLLEGE; SCHOOL OF PRACTICAL SCIENCE; REPORT OF J. A. DUFF, ESQ., B.A., LECTURER IN THE SCHOOL OF PRACTICAL SCIENCE.

1. ANNUAL REPORT OF THE UNIVERSITY OF TORONTO, 1894-95.

To His Honor the Honorable George A. Kirkpatrick, LL.D., Lieutenant-Governor of the Province of Ontario, Visitor of the University of Toronto.

MAY IT PLEASE YOUR HONOR :

The Chancellor, Vice-Chancellor, and members of the Senate of the University of Toronto, have the honor to present their report upon the condition and progress of the University for the year 1894-1895.

The following tabulated statement of the admission to degrees, and *ad eundem statum*, and of the members who matriculated in the different Faculties from June, 1894, to June, 1895, is submitted :—

Law :—

Matriculation	16
Degree of LL.B.	18

Medicine :

Matriculation	40
<i>Ad eundem statum</i> , from the College of Physicians and Surgeons	12
<i>Ad eundem statum</i> , from other Universities	2
Degree of M.B.	65

Arts :—

Matriculation	225
Degree of B.A.	175
Degree of M.A.	13

Agriculture :—

Degree of B.S.A.	8
-----------------------	---

Pedagogy :—

Degree of B. Ped.	1
------------------------	---

Dentistry :—

Matriculation	6
<i>Ad eundem statum</i> from the Royal College of Dental Surgeons.	64
Degree of D.D.S.	34

Music :—

Matriculation	9
<i>Ad eundem statum</i>	1

Pharmacy :—

Matriculation	2
<i>Ad eundem statum</i> , from the Ontario College of Pharmacy.....	41
Degree of Phm. B.	39

Engineering :—

Degree of C.E.	2
---------------------	---

Applied Science :—

Degree of B.A. Sc.	11
-------------------------	----

During the year fourteen hundred and thirty-five candidates were examined in the different Faculties, as follows :—

Faculty of Law	20
Faculty of Medicine.....	233
Faculty of Arts.....	1013
Faculty of Agriculture	11
Department of Pedagogy.....	4
Department of Dentistry	72
Department of Music	27
Department of Pharmacy.....	42
Department of Engineering	2
Department of Applied Science.....	11

Total 1,435

TORONTO, November 8th, 1895.

W. MULOCK,
Vice-Chancellor.

2. ANNUAL REPORT OF THE COUNCIL OF THE UNIVERSITY OF TORONTO, 1894-1895.

To His Honor the Honorable George A. Kirkpatrick, LL.D., Lieutenant Governor of the Province of Ontario, Visitor of the University of Toronto.

MAY IT PLEASE YOUR HONOR :

The Council of the University of Toronto begs leave to present to your Honor the following report for the academic year, ending with the 30th of June, 1895 :—

In accordance with the provisions of the new University Act, the University Council is now charged with the work of instruction in Arts, Law, and Medicine ; the subjects in the Faculty of Arts, being, however, restricted to Mathematics, Physics, Mineralogy and Geology, Chemistry, Zoology, Botany, Physiology, History, Ethnology, Comparative Philology, History of Philosophy, Logic and Metaphysics, Italian and Spanish, and Political Science.

Under this arrangement the members of the teaching Faculties of Art and Law for the past session were as follows :—

Staff, 1894-1895.—Faculty of Arts.

President, JAMES LOUDON, M.A., LL.D.

Physics :—

Professor, James Loudon, M.A., LL.D.

Demonstrator, W. J. Loudon, B.A.

Lecturer, C. A. Chant, B.A.

Assistant-Demonstrator, J. C. MacLennan, B.A.

Fellow, G. F. Hull, B.A.

Mathematics :—

Professor, Alfred Baker, M.A.
 Lecturer, A. T. DeLury, B.A.
 Fellow, J. W. Odell, B.A.

Chemistry :—

Professor, W. H. Pike, M.A., Ph.D.
 Lecturer, W. L. Miller, B.A., Ph.D.
 Fellow, Miss J. Balmer, B.A.
 Lecture-Assistant, F. B. Allan, B.A.

Biology :—

Professor, R. Ramsay Wright, M.A., B.Sc.
 Lecturer, E. C. Jeffrey, B.A.
 Assistant-Demonstrator, R. R. Bensley, B.A., M.B.
 Fellow, J. McCrae, B.A.

Physiology :—

Associate Professor, A. B. Macallum, B.A., M.B., Ph.D.

Mineralogy and Geology :—

Professor, Edward J. Chapman, Ph.D., LL.D.
 Fellow, W. A. Park, B.A.

History and Ethnology :—

Professor, G. M. Wrong, B.A.

Comparative Philology :—

Professor, Maurice Hutton, M.A.

Political Economy and Constitutional History :—

Professor, James Mavor.
 Fellow, O. A. Stuart, B.A.
 Mackenzie Fellow in Political Science, S. J. McLean, B.A.
 Mackenzie Fellow in Political Science, D. C. Ross, B.A.

Philosophy :—

Professor of History of Philosophy, J. G. Hume, B.A., Ph.D.
 Lecturer and Demonstrator, A. Kirschman, Ph.D.
 Lecturer, F. Tracy, B.A., Ph. D.

Italian and Spanish :—

Associate-Professor, W. H. Fraser, B.A.
 Fellow, F. J. A. Davidson, M.A.

FACULTY OF LAW.

Political Economy and Constitutional History :—

Professor, James Mavor.

Roman Law, General Jurisprudence and History of English Law :—

Professor, Hon. William Proudfoot.

Constitutional and International Law :—

Professor, Hon. David Mills, LL.B.

The following tables exhibit the numbers attending the pass and honor lectures in University subjects :—

PASS.

Subjects.	Mathematics.	Physics.	Chemistry.	Biology.	Mineralogy and Geology.	Philosophy.	Logic.	Political Science.	History
Fourth year	7					28		28	
Third year		28				36		37	42
Second year.....		40	30		24	181	129		94
First year.....	185	97		155					
Totals.....	192	165	30	155	24	245	129	65	136

In no case do the numbers given above include honor students. Instruction was given to one student of the first year in the School of Practical Science in Mathematics. Instruction in Physics, Biology and Chemistry was given to sixty-four students of the first year ; in Medicine in Physics and Chemistry to thirty-one students of the first year ; and to twenty-nine students in the second year in the School of Practical Science.

HONOR.

Subjects.	Mathematics.	Physics.	Chemistry.	Biology.	Mineralogy and Geology.	Philosophy.	Political Science.	History.	Italian.	Spanish.	Ethnology.
Fourth year	5	8	1	13	19	17	38		4	3	27
Third year		18	22	20	22	14	33	25	37	37	
Second year	21	2	28	27	32	23	50	55	25	25	
First year.....	41	37	34	32	34				62		
Totals.....	67	65	85	92	107	54	121	80	128	65	27

Note.—The second year lectures in Chemistry and the fourth year lectures in Biology were attended by forty-six students of the second year in Medicine. Instruction in Mathematics was given to forty-two students of the first year and to twenty-nine students of the second year in the School of Practical Science.

The following table exhibits the numbers taking practical work in the University Laboratories :—

Laboratories.	Physical.	Chemical.	Mineralogical.	Biological.	Psychological.
Fourth year.....	8	1	7	13	17
Third year	18	22	22	20	14
Second year	21	28	32	27	
First year.....	37			32	
Totals.....	84	51	61	92	31

Note.—Practical instruction in Chemistry and Biology was given to forty-six students of the second year and to sixty-four students of the first year in Medicine and in Physics to eighty-five students of the School of Practical Science. Two graduates in Arts were engaged in original research in the Psychological Laboratory during the session.

The members of the teaching staff in Medicine for the last session were as follows :—

FACULTY OF MEDICINE.

Professor of Surgery :—

W. T. Atkins, M.D., Tor., LL.D.

Professor of Clinical Surgery :—

I. H. Cameron, M.B., Tor.

Professor of Clinical Surgery :—

L. McFarlane, M.D., Tor.

Associate-Professor of Surgery and Clinical Surgery :—

G. A. Peters, M.B., Tor., F.R.C.S., Eng.

Professor of Anatomy :—

J. H. Richardson, M.D., Tor.

Associate-Professor and Demonstrator of Anatomy :—

A. Primrose, M.B., C.M., Edin.

Lecturer in Anatomy :—

H. Wilberforce Atkins, B.A., M.B., Tor.

Senior Assistant Demonstrator of Anatomy :—

F. N. G. Starr, M.B., Tor.

Assistant Demonstrators of Anatomy :—

F. W. Cane, M.B., Tor.
A. R. Gordon, M.B., Tor.
B. E. MacKenzie, B.A., M.D., McGill.
W. B. Thistle, M.D., Tor.
F. Winnett, M.D., Tor.
G. Clingan, M.B., Tor.

Professor of Medicine and Clinical Medicine :—

J. E. Graham, M.D., Tor., M.R.C.P., Lond.

Associate-Professor of Medicine and Clinical Medicine :—

A. McPhedran, M.B., Tor.

Lecturer on Clinical Medicine :—

W. P. Caven, M.B., Tor.

Professor of Pathology :—

J. Caven, B.A., M.D., Tor.

Demonstrator in Pathology :—

J. A. Amyot, M.B., Tor.

Professor in Pharmacology and Therapeutics :—

J. M. MacCallum, B.A., M.D., Tor.

Demonstrator of Materia Medica and Elementary Therapeutics :—

C. F. Heebner, Phm. B., Tor.

Professor of Gynæcology :—

U. Ogden, M.D., Tor.

Professor of Obstetrics :—

A. H. Wright, B.A., M.D., Tor.

Professor of Ophthalmology and Otology :—

R. A. Reeve, B.A., M.D., Tor.

Clinical Lecturer on Ophthalmology and Otology :—

G. H. Burnham, M.D., Edin., F.R.C.S., Edin.

Clinical Lecturer on Laryngology and Rhinology :—

G. R. McDonagh, M.D., Tor.

Professor of Hygiene :—

W. Oldright, M.A., M.D.

Medical Lecturer on Medical Jurisprudence :—

B. Spencer, M.D., Tor.

Legal Lecturer on Medical Jurisprudence :—

Hon. David Mills, LL.B., Q.C.

Extra-Mural Professor of Mental Diseases :—

Daniel Clark, M.D., Tor.

Professor of Physics :—

James Loudon, M.A., LL.D.

Lecturer on Physics :—

O. A. Chant, B.A.

Professor of Chemistry :—

W. H. Pike, M.A., Oxon., Ph. D., Göttingen.

Lectures on Chemistry :—

W. L. Miller, B.A., Ph. D., Munich.

F. B. Allan, B.A.

Lecturer on Chemistry and Toxicology :—

W. H. Ellis, M.A., M.B., Tor.

Professor of Biology :—

R. Ramsay Wright, M.A., B.Sc., Edin.

Professor of Physiology :—

A. B. Macallum, B.A., M.B., Tor., Ph. D., John Hopkins.

Assistant-Demonstrator in Biology :—

R. R. Bensley, B.A., M.B., Tor.

The following table exhibits the number of students registered as in attendance upon the lectures given by the staff of the Faculty of Medicine :—

Students of the Fourth Year	63
Students of the Third Year	57
Students of the Second Year	61
Students of the First Year.....	78
Occasional Students.....	75
Total.....	334

UNIVERSITY OF TORONTO, December 10th, 1896.

J. LOUDON,
President.

3. ANNUAL REPORT OF THE COUNCIL OF UNIVERSITY COLLEGE, 1894-1895.

To His Honor, the Honorable George A. Kirkpatrick, L L D., Lieutenant-Governor of the Province of Ontario, Visitor of University College.

May it please your Honor :

The President and Council of University College beg leave to present to your Honor the following report for the academic year, ending June 30th, 1895.

By a provision of the University Act, which took effect by a proclamation of the Lieutenant-Governor in Council, on November 12th, 1890, the work of instruction assigned under the confederation scheme to University College is now restricted to the departments of Greek, Latin, English, French, German, Oriental Languages, Moral Philosophy and Ancient History. Under this arrangement, the staff for the past session was composed of the following :—

Staff, 1894-1895.

President, *James Loudon*, M.A., LL.D.

Greek—

Professor, *Maurice Hutton*, M.A.
Lecturer, *A. Carruthers*, M.A.

Latin—

Associate-Professor, *William Dale*, M.A.
Lecturer, *W. S. Milner*, M.A.
Fellow, *F. B. R. Hellems*, B.A.
Temporary Lecturer, *Rev. Professor H. J. Cody*, M.A.

English—

Professor, *W. J. Alexander*, B.A., Ph.D.
Lecturer, *D. R. Keys*, M.A.

French—

Associate-Professor, *John Squair*, B.A.
Lecturer, *John Home Cameron*, B.A.
Fellow, *W. E. Lingelbach*, B.A.

German—

Associate-Professor, *W. H. VanderSmitten*, M.A.
Lecturer, *G. H. Needler*, B.A., Ph.D.
Fellow, *E. F. Langley*, B.A.

Oriental Languages—

Professor, *J. F. McCurdy*, Ph.D.
Lecturer, *D. W. McGee*, B.A., Ph.D.

Ethics—

Professor, *J. G. Hume*, B.A., Ph.D.

In the new Act it is further provided that students attending lectures in the above or other arts subjects of University study shall, if not enrolled elsewhere, be enrolled in University College.

The numbers registered in accordance with this regulation, together with others taking full or partial courses in University College, were as follows:—

—	4th Year.	3rd Year.	2nd Year.	1st Year.	Total.
Matriculated students	138	127	147	137	549
Occasional students.....	19	19	31	77	146
Totals.....	157	146	178	214	695

The following tables exhibit the numbers attending the pass and honor lectures in University College subjects:—

PASS.

—	Greek.	Latin.	English.	French.	German.	Oriental.	Ethics.	Ancient History.
Fourth Year	5	20	33	9	8

UNIVERSITY COLLEGE,
December 20th, 1895.

J. LOUDON,
President.

4. ANNUAL REPORT OF THE SCHOOL OF PRACTICAL SCIENCE, 1895.

To the Hon. G. W. Ross, LL.D., M.P.P., Minister of Education.

SIR,—I have the honor to submit the annual report of the School of Practical Science for the year 1895.

The calendar year not being conterminous with the academic year, this report will cover the second term of the session 1894-5 and the first term of the session 1895-6, except where otherwise stated.

In the second term of 1894-5, instruction was given in the building to students of the School of Science, students in Arts, and students in Medicine.

Owing to the completion of the new chemical laboratory the instruction given in this building during the first term of 1895-6 has been confined, with a small number of exceptions, to the regular and special students of the school.

The numbers in attendance were as follows :

<i>School of Science Students.</i>		
	2nd term, 1894-5.	1st term, 1895-6.
Taking full courses.		
I year	40	40
II "	29	21
III "	24	14
IV "	11	11
Taking partial courses	11	11
<i>University Students.</i>		
Arts	109	9
Medicine	139	..

The students of the School of Science taking full courses during the second term of 1894-5 were required to take University lectures in Mathematics, Physics and Chemistry. During the first term of 1895-6 the only University lectures obligatory were Mathematics and Physics, except in the case of students in the Department of Analytical and Applied Chemistry, who are obliged to take certain University lectures in Chemistry.

The attendance at these lectures was as follows :

	2nd term, 1894-5.	1st term, 1895-6.
Mathematics	72	61
Physics	82	59
Chemistry	41	1

The fees for the regular and special students of the School of Practical Science during the academic year 1894-5 were \$5,582, being an increase of \$305 on the fees of the previous year.

Of the above amount, \$1,250 were paid to the Bursar of the University of Toronto under the authority of an Order-in-Council dated June 4, 1895, and the remainder, \$4,332, to the Hon. the Provincial Treasurer.

The number of regular students who presented themselves at the annual examinations of the academic year 1894-5 was eighty-three, of these fifty-nine passed. The number of graduates was nineteen. The total number of graduates up to date is one hundred and sixty-nine.

The total number of graduates who have proceeded to the degree of C.E. in the University of Toronto is ten.

The number of graduates who proceeded to the degree of B.A.Sc. at the University examinations of 1895 was eleven. The total number of graduates who have received the degree of B.A.Sc. is thirty-four.

The regular courses in the school are :

- (1) Civil Engineering (including Sanitary Engineering).
- (2) Mining Engineering.
- (3) Mechanical and Electrical Engineering.
- (4) Architecture.
- (5) Analytical and Applied Chemistry.

The following statement shows the courses of lectures and practical instruction, the instructors, and the numbers of students taking the various courses.

Subjects Taught by the Faculty of the School of Science.

Subjects.	Instructors.	Numbers of students.	
		2nd term, 1894-5.	1st term, 1895-6.
Organic and Inorganic Chemistry, Applied Chemistry.	W. H. Ellis, M.A., M.B., Professor. W. Lawson, B.A.Sc., Fellow.	98	86
Mineralogy and Geology, Petrography, Metallurgy and Assaying, Mining and Ore-dressing, German.	A. P. Coleman, M.A., Ph.D., Professor. G. R. Mickle, B.A., Lecturer. W. E. Boustead, B.A.Sc., Acting Demonstrator.	60	48
Statics, Dynamics, Strength of Materials, Theory of Construction, Compound Stress, Hydraulics, Thermodynamics and Theory of the Steam Engine, French.	J. Galbraith, M.A., Professor. J. A. Duff, B.A., Lecturer. W. Minty, B.A.Sc., Fellow.	104	89
Drawing, Architecture, Plumbing, Heating and Ventilation, Mortars and Cements, Brick and Stone Masonry.	C. H. C. Wright, B.A.Sc., Lecturer. Jos. Keele, B.A.Sc., Fellow.	101	83
Surveying, Geodesy and Astronomy, Spherical Trigonometry, Least Squares, Descriptive Geometry.	L. B. Stewart, D.T.S., Lecturer. A. T. Laing, B.A.Sc., Fellow.	97	81
Electricity, Magnetism, Machine Design, Mechanics of Machinery, Rigid Dynamics.	T. R. Rosebrugh, M.A., Lecturer. A. E. Blackwood, Fellow.	75	57

Subjects Taught by the University Professoriate.

Algebra, Euclid, Plane Trigonometry, Analytical Geometry, Calculus, Astronomy.	Alfred Baker, M.A., Professor. A. T. DeLury, B.A., Lecturer. W. J. Rusk, B.A., Fellow.	71	60
Sound, Light, Heat, Electricity and Magnetism, Hydrostatics.	Jas. Loudon, M.A., LL.D., Professor. C. A. Chant, B.A., Lecturer. W. J. Loudon, B.A., Demonstrator. J. C. McLennan, B.A., Assistant Demonstrator.	71	55
Inorganic and Physical Chemistry.	W. H. Pike, M.A., Ph.D., Professor. W. L. Miller, B.A., Ph.D., Demonstrator.	41	1

The subject of Elementary Chemistry was formerly taught by the University Professor, but it is now taught by the Professor of Applied Chemistry of the school, beginning at the present session.

General Remarks.

The removal of the chemical laboratory of the University from this building afforded an opportunity of rearranging the rooms for the purposes of the chemical and mineralogical departments of the School of Practical Science. The room at the east end of the old building formerly used by Professor Pike as a students' laboratory has been converted into a blowpipe and assay laboratory. The space below this room in the basement is now used as a galvanometer room and is fitted up with galvanometers, electrometers, and other delicate instruments requiring very steady supports.

Several small rooms in the basement, south of the fire assay room, have been converted into a single room, in which a three-stamp mill, a Frue-vanner, crusher, etc., have been set up for the purpose of treating gold ores.

In all departments such additions have been made both to the instrumental equipment and the library as experience has proved necessary and useful.

The following are some of the principal requirements yet to be satisfied :

1. Three small testing machines for tension compression and torsion.
2. A ten-foot standard of length ; a semi-portable transit instrument.
3. A roasting furnace and a crucible furnace.

Leaching vats.

The ceiling over the milling room requires to be packed with mineral wool to deaden the sound.

4. A first-class fire-proof switch board, several dynamos and converters.
5. In all departments additions will be required to the books and periodicals, photographs, models, collections, cabinets and shelving.

J. GALBRAITH,
Principal.

TORONTO, December, 1895.

5. REPORT OF A VISIT TO SCIENTIFIC INSTITUTIONS IN THE UNITED STATES, BY J. A. DUFF, ESQ., B.A., LECTURER IN THE SCHOOL OF PRACTICAL SCIENCE.

To the Honorable G. W. Ross, LL.D., M.P.P., Minister of Education :

SIR,—I have the honor to report that during the months of May and June I visited Cornell University, Ithaca, N.Y. ; Columbia College, New York City ; Stevens Institute, Hoboken, N.J. ; Lehigh University, Bethlehem, Pa. ; Lafayette College, Easton, Pa. ; Massachusetts Institute of Technology, Boston ; Lawrence Scientific School, Harvard University ; The Polytechnic Institute, Worcester, Mass. ; and the Government Testing Laboratory, Watertown, Mass.

My special object was to acquaint myself with the character of the equipment of the above mentioned institutions for testing the strength and properties of materials, the methods of carrying on the tests, of recording results and preserving the tested specimens, and to enquire into the systems of teaching the theory of construction and testing of materials.

It was near the close of the session and the colleges were not in full working order, but I was able to meet with the professors and instructors in the laboratories and derived much benefit from their descriptions of the various instruments and methods of work.

In every case I was received with the greatest courtesy and every facility for acquiring information was afforded me.

The Engineering Laboratories in the School of Practical Science are sub-divided as follows: (a) Laboratory for Testing the Strength and Elasticity of Materials. (b) Cement Testing Laboratory. (c) Thermodynamic Laboratory. (d) Hydraulic Laboratory. (e) Electrical Laboratory. (f) Astronomical and Geodetic Laboratory.

In order to avoid any misapprehension I expressly state that in describing the equipment of the different institutions, I have reference only to their facilities for carrying on the experimental work in the first two sub-divisions, viz., Testing the Strength and Elasticity of Materials and Cement Testing.

Cornell University.

The Cement Testing Laboratory is in the College of Civil Engineering and is provided with automatic machines for the establishment of standard tests. The standard conditions that are aimed to be obtained in all tests, are nearly independent of human agencies and from the sifting of the cement, through the operations of moulding, mixing, condensing and testing, and even portions of the computations are done by machinery.

The time of setting of cement is obtained by an ingenious machine which describes an autographic diagram of the rate of setting.

The testing of materials is carried on both in the College of Civil Engineering and in the Sibley College of Mechanical Engineering. The Laboratory of the College of Civil Engineering is equipped with tension and compression machines, a Thurston Torsion machine, and there has recently been added a Riehlé machine of 400,000 pounds capacity, designed for experiments in tension, compression, shearing and cross-breaking. This machine is filled with attachments for automatically running out the poise and for describing an autographic diagram to record the amount of stress applied to the specimen at each instant, and the corresponding strain of deformation.

In the Museum of the College of Civil Engineering is a large collection of models of the standard joints and fastenings used in bridge work and a complete truss bridge one quarter full size.

The Testing Laboratory of Sibley College contains twenty machines of various standard types, for testing the strength of metals, including machines of 50 tons, 100 tons and 150 tons capacity. Impact machines, and Olson Torsion machine, similar to the one in the School of Practical Science, and one small and one 200,000 pound Emery testing machine. The 150 ton machine was manufactured by Olson and is fitted with automatic and autographic attachments.

Columbia College.

A valuable collection of new and old material which has failed under stress is continually receiving additions.

The Cement Laboratory is furnished with a Riehlé testing machine, fitted with improved briquette holders, and a full complement of the moulds, settling tanks, sieves, etc., necessary for conducting tests in cement.

The Testing Laboratory is equipped with three standard machines for determining tensile, compressive and transverse strength of material, a Fairbank, Riehlé and Emery of 50,000, 100,000 and 150,000 pounds capacity respectively; and Keep's apparatus for cast iron under load and shock is available. When the College is removed to its new buildings, there will be better accommodation in the Laboratories and large additions to the equipment are contemplated.

Stevens Institute.

Machinery for testing the strength of materials is arranged as occasion requires. Among the machines used exclusively for testing may be mentioned one designed for testing wire by torsion.

Lehigh University.

The Bethlehem Iron Co. have donated to Lehigh University their World's Fair collection of specimens showing the influence of the chemical composition of steel on its strength and ductility.

The Laboratory contains a Riehle testing machine and students have access to the well equipped Laboratory of the Bethlehem Iron Co.

This latter contains an Emery machine and two screw power machines. The Engineer of Tests explained to me the manner in which the quality of steel of each heat is ascertained and the material traced from the blast furnace till it leaves the rolls a finished product.

I was conducted through the works which contain blast furnaces, open hearth and Bessemer furnaces, re-heating and Harveyizing furnaces, rail and plate mills, machinery for boring and rifling cannon, finishing armor plates, etc., etc.

Lafayette College.

The Cement Laboratory contains a 2,000 pound machine in which the stress is applied automatically by the gradual filling with water of a vessel suspended from a lever of the machine; a machine for making briquettes; a jig; and tanks, moulds, sieves, etc.

The Testing Laboratory contains an Olsen, automatic, autographic machine of 100,000 pounds capacity; a 4,000 pound wire tester and a smaller machine for testing cord, etc.; a transverse testing machine, a torsion machine and a rattler for abrasion tests. In addition to the above equipment there had been ordered from Riehle Bros. a 500,000 pound machine for tension, compression and transverse tests, and which is to be provided with automatic and autographic attachments. I saw the different parts of this machine in various stages of completion in the shops of Riehle Bros., Philadelphia.

Worcester Polytechnic Institute.

The Cement Laboratory is furnished with a cement testing machine and all necessary facilities for investigating cements.

The Testing Laboratory contains an Emery testing machine of 100,000 pounds capacity and other smaller machines and accompanying apparatus.

Lawrence Scientific School.

A separate building has recently been erected for an Engineering Laboratory and the equipment is nearly all new. The official tests of the Department of Roads for the State of Massachusetts are conducted in this laboratory.

The equipment for testing the strength of materials consists of special machines for making abrasion tests and determining the cementing value of stones. A cement testing machine with all the usual accessories.

An Olsen machine, 200,000 capacity, with extension tables for bending tests; a Riehle machine of 60,000 pounds capacity, and Keep's bending and impact machine for cast iron.

Massachusetts Institute of Technology.

The cement laboratory is furnished with all the usual appliances for testing cements.

For testing the strength and elasticity of materials there is a testing machine of 50,000 pounds capacity for determining tensile strength, elasticity and compressive strength ; a machine, 100,000 pounds capacity, for testing beams up to twenty-five feet in length, framing joints used in practice, and other structures subjected to transverse loads ; a machine of 18,000 pounds capacity, for beams up to fourteen feet in length ; a torsion machine taking shafts up to three inches in diameter and twenty-one inches in length ; machinery for measuring the twist in shafting ; special machines for testing the effect of repeated stresses upon the elasticity and strength of iron and steel ; for testing ropes, wire, cloth, pipes and pipe fittings, and a horizontal Emery machine of 300,000 pounds capacity, suitable for testing a compression specimen twelve feet long.

Government Testing Laboratory.

Most of the tests are made on the 900,000 pound Emery testing machine. At the time of my visit this machine was being used to determine the compressive strength of copper specimens not more than one-quarter of an inch in diameter. Experiments to determine the effect of repeated stresses on steel were in progress on a testing machine, specially designed for the purpose.

School of Practical Science, Toronto.

For the purpose of comparison I append the equipment of the School of Practical Science.

The cement laboratory is equipped with a Riehlé cement testing machine and all the necessary appliances for conducting tests on cement.

The laboratory for testing the strength and elasticity of materials contains an Emery testing machine of 100,000 pounds capacity, adapted for tests in compression, tension and shearing. A Riehlé machine of 200,000 pounds capacity, for making tests in tension, compression, shearing and cross-breaking. It will take in posts twelve feet long and beams up to eighteen feet in length.

An Olson torsion machine, for testing the strength and elasticity of shafting, which will twist shafts up to sixteen inches in length and two feet in diameter. There is also a very complete collection of callipers and extensometers for use in measurements where great precision is required.

The following machines would form a very desirable addition to our equipment : Two screw power machines of 20,000 pounds and 5,000 pounds capacity, respectively, and a small torsion machine of twisting wire, etc.

After a careful examination into the working of automatic and autographic attachments I would not recommend that any be procured.

With reference to the methods of keeping records and preserving the tested specimens, I would recommend that a photograph be taken showing the manner of failure of every specimen tested, and that those specimens, which would be valuable for instructional purposes, be placed in cabinets in the laboratory or halls. The most desirable specimens are those which best exemplify the theory and those whose failure exhibits a striking exception to the general rule.

By replacing them from time to time as more characteristic specimens are obtained, a collection might soon be made which would embrace almost every type of failure, and yet would not be unwieldy.

We have already some valuable examples of failure under stress but have no proper place to keep them, accordingly I would recommend that cabinets be procured in which to place these tested specimens, carefully labelled, so that they may be studied with advantage by the students and by visitors to the School of Practical Science.

COLLEGIATE INSTITUTE, OTTAWA.

APPENDIX M.—INDUSTRIAL SCHOOLS, 1895.

To the Hon. George W. Ross, LL.D., Minister of Education, Toronto :

SIR,—I have the honor to present the following report in regard to the Industrial Schools, conducted by the Toronto Industrial School Association :

1. *The Alexandria Industrial School for Girls.*

The registered number for the year is 27.

The number of girls in the school at present is 23.

Three girls entered the Institution during the year, and four were discharged, three of whom went home to their parents, and the other girl was provided with a home at Newcastle and is still under the supervision of the Board of Management.

Total number of days attended, 8,844.

The following additional facts are worthy of note :

In January a branch of the Junior Christian Endeavor Society was established, and the girls have earned \$45.00 by the sale of useful and fancy articles made by them in their spare moments. The money has been devoted to missionary purposes ; it was given to the Rev. Mr. Bingham, who gave an address on mission work in Lagos, Africa, where he is stationed.

The Presbyterian Sunday School of the village of East Toronto presented about a hundred books to the school library, and Berkeley Street Methodist Sunday School contributed a number of copies of the *British Workman* and *Workwoman* for use in the school room as supplementary reading.

2. *The Victoria Industrial School for Boys.*

The total number of days attended was 67,999.

Sixty-two boys left the Institution during the year, and forty-four new boys were admitted.

There are now 177 boys in attendance.

The work of the Institution has developed fairly well during the year.

The Howland Memorial Hall is nearly completed, and increased facilities have been provided for the Horticultural Department, the school proper and the Industrial Departments, which are doing good work.

JAMES L. HUGHES,
P. S. Inspector.

APPENDIX N.—NORMAL AND MODEL SCHOOLS, 1895.

1.—TORONTO NORMAL AND MODEL SCHOOLS.

To The Honorable G. W. Ross, LL.D., M.P.P., Minister of Education:

SIR,—I beg to present the following brief report of the Toronto Normal and Model Schools.

1. THE NORMAL SCHOOL.

Attendance.

There is seating capacity in the Normal School for 120 students.

There were in attendance

In 1894.....1st Session.....	25	Males.....	87	Females.....	
“.....2nd “.....	26	“.....	93	“.....	
In 1895.....1st “.....	30	“.....	88	“.....	
“.....2nd “.....	35	“.....	88	“.....	

In 1895 there were students from thirty-five counties.

Average Age of Students.

In 1895....1st Session....	Males 22.80 yrs....	Females 21.93 yrs.
“....2nd “....	“ 23.72 “....	“ 22.47 “

Average Time Taught Before Entering the Normal School.

In 1895....1st Session....	Males 3.23 yrs....	Females 2.74 yrs.
“....2nd “....	“ 3.10 “....	“ 2.92 “

Number Who Applied for Admission.

In 1894.....1st Session.....	141	Students.
“.....2nd “.....	182	“
In 1895.....1st “.....	199	“
“.....2nd “.....	203	“

Certificates Granted.

In 1894.....1st Session.....	110.
“.....2nd “.....	102.
In 1895.....1st “.....	115.
“.....2nd “.....	Not completed.

Aim of the Normal School.

The Normal Schools of Ontario are now strictly Professional Institutions. The non-professional work is now done in the Collegiate Institutes and High Schools.

Their aim is to prepare students for the work of organizing, governing and teaching the Public Schools. To accomplish this end the students must possess a thorough knowledge of the subjects to be taught, and of the best methods of teaching them. They must know the laws of mental development, and the mental processes in every branch of school work, they must also be familiar with the history of education and have a practical knowledge of the best methods of organizing both graded and ungraded schools.

Professional Work.

Observation.—No description of methods can equal the direct, practical lessons which students derive from their intercourse with pupils in the actual work of the school-room. Knowledge and mental power is indispensable, but, after all, the art of teaching cannot be learned without the study of good models and by actual teaching. Great attention is, therefore, paid to this part of professional work.

As soon as possible after the students enter the Normal School they attend a course of lectures on pedagogics in which the leading principles of education are briefly set forth. They are then divided into classes corresponding in number to the divisions of the Model School, including the Kindergarten. These classes spend part of each day in the Model School observing the teaching by the teachers of the several divisions, and arrangements are so made that the students see lessons taught in every subject of the Public School course before they are required to teach classes in the Model School.

Aim of Observation Lessons.—The Observation Lessons are not intended to be used as models for imitation, but as lessons for examination and critical study. The students write plans of the lessons, which they submit to the Normal School Masters, who have also heard many of the lessons taught, and besides have received an analysis of the lesson from the teacher who taught it. These plans are discussed and criticised before the whole class and afterwards returned to the writers with suitable annotations.

After the students have observed the teaching in all the classes in the Model School and the general work in the Kindergarten, they are prepared to begin to teach under the directions of the teachers in charge of the different divisions. But observation does not cease. During the whole session every time the students teach in the Model School they observe a lesson taught by the teacher in charge of the division. And in addition to this, once during the session each teacher in the Model School brings his or her class into the Normal School and gives a model lesson before the whole students. While great stress is laid on the observation of the methods of competent teachers, every care is taken to prevent mere imitation, for it is surprising how bad a teacher's work may be when imitating a good method.

Practice.—For practical teaching the students are divided into classes of six in each class. While half the class teaches, the other half writes criticisms of the lessons taught by their fellow-students. The lessons are assigned the day before they are required to be taught. After carefully studying the subject the student prepares a "Plan of the Lesson," in which he shows *what* he is going to teach and *how* he intends to teach it. This plan is handed to the teacher in charge before the student begins to teach. The very good plans and the very bad ones are sent to the Principal who points out their merits and defects to the class. Twice a week the more important points in these reports are summarized by the Principal or Vice-Principal and discussed before all the students, and then entered in books kept for the purpose. These reports form an important item in the final classification of the students.

Criticism.—The criticisms of the lessons taught by the students form a very important part of their training. They are mainly conducted by the teacher in charge, who meets with the students after the pupils have been dismissed in the afternoon. The students read their criticisms and the method and manner of the student teachers are freely and fully discussed by all present, their merits and demerits pointed out and improvements suggested. The intelligence and aptness of the criticisms are taken into account in fixing the rank of those who make them. In these discussions many principles are set forth and illustrated, and thus fixed in the minds of those present; practical suggestions are made in connection with the lessons taught; objections are answered and everything proposed is tried by the most natural and proper tests. Hence it will be seen that these criticisms are not mainly of a fault-finding nature. The following plan is usually followed:

(1) The matter selected; (2) the method adopted; (3) the managing power shown; (4) the ability to question; (5) the language employed; (6) the general results of the teaching.

The Course of Study.

The course of study in the Normal Schools embraces lectures, recitations and examinations on the following subjects :

Psychology.—Three lectures a week are devoted to this subject. The teacher who is familiar with mental science will know that the aim of education is not knowledge alone, but rather the development of intelligence through knowledge. He will, therefore, avoid mechanical teaching in all its forms, and adopt only methods which aim equally at the acquisition of knowledge, the training of mind, and the formation of character.

History of Education.—Two lectures a week are given on this subject. Experience in education, like all other experience, may be communicated. Hence, the experience of the great teachers of the world should be carefully studied in order that their errors may be avoided and their wisdom made our own.

School Organization and Management.

To this subject two lectures a week are given. The aim of the lectures is :

- (1) To make clear the object of school organization and school management.
- (2) To make students familiar with the various systems of organizations adopted in different counties.
- (3) To place high ideals before them.

Methods of Teaching.

To this subject five hours a week are allotted. It is very properly considered of the first importance, since, probably, more failures arise from not knowing how to use knowledge aright in teaching than from the lack of knowledge itself. The methods impressed upon the students are as far as possible removed from mere devices. The methods are based upon the permanent and universal laws of childhood and on the permanent nature of the studies taught. In discussing this subject the principles upon which every good method rests are set forth, and then the methods recommended follow as corollaries.

Review of Public School Studies.

The shortness of the session permits but little of this work to be done. All that time permits is done in connection with the methods of teaching the different subjects. But this is far from enough. For after all, the first condition of successful teaching is a thorough knowledge of the subject to be taught. No method of teaching, however good, can enable a teacher to teach what he does not know. Hence, a full, clear, logical knowledge of public school studies from a teacher's standpoint is indispensable. A longer session would enable us to do more of this work and do it better.

Non-professional Subjects.

Besides the purely professional work, the following subjects are taught, but taught in such a way as to indicate the best methods of teaching them in the Public Schools.

Hygiene.—Two lectures a week are given to this subject, which embraces the work taken up in the Public School physiology and temperance. Stress is laid on how to prevent disease and to take care of the health.

Physics.—In this subject the elementary principles of statics, dynamics, heat, light and electricity are discussed so far as to explain the phenomena more constantly occurring around us.

Agriculture.—The subjects discussed in the lectures on this subject are the plant, the soil, tillage operations, seeds and sowing, rotation of crops, diseases of crops, insects injurious to vegetation, dairy products, forestry, beautifying country homes.

Botany.—The following subjects are discussed: The general structure of flowering plants, their classification and characters, including the properties of the more commonly occurring orders. The lectures are illustrated by models, diagrams, and by fresh specimens.

Writing.—The instruction in this subject consists in a description and discussion of the various historical methods of teaching writing, with reasons for selecting the system adopted in the Normal and Model Schools. As many of the students write badly it is found to be necessary to devote a certain portion of the time to teaching the subject, but this is done so as to indicate how a legible, rapid style of writing may be acquired and maintained throughout the whole Public School course.

Drawing.—With few exceptions the students know nothing of this subject on entering the Normal School. The subject has, therefore, to be taught from the beginning. Special attention is given to object drawing. The best methods of teaching the subject to a class is explained by lectures and by example.

Music.—The lessons in music are designed to give the students a thorough grasp of the subject. The principles involved are made familiar through the songs, and further illustrated by classes of children from the Model School.

Drill and Calisthenics.—A teacher without health and bodily vigor cannot teach well. Hence, much attention is given to physical training. The students are taught the more important military movements, marching, dumb-bell, wand and other exercises.

The Kindergarten.—Amongst the more important educational reforms of the nineteenth century is the Kindergarten. In most countries the application of the principles discovered by Frœbel is left to private generosity. In Ontario it is incorporated as part of the educational system.

The Normal Kindergarten consists of a Model Kindergarten and a training department to prepare students for the position of directors of the Kindertgartens throughout the Province. The Director gives a weekly lecture to the Normal School students on Kindergarten principles, and besides spends an hour each week in teaching them the Kindergarten songs.

The Library.—Not the least valuable aid in the training of the teachers is the excellent educational library in connection with the Department. It is much used and greatly appreciated. In order to have a deep and broad knowledge of any branch of knowledge, as well as to secure a lasting interest in the subject, many authorities must be consulted. By the use of the library the students not only learn how to study, but also to use books to the best advantage.

II. THE MODEL SCHOOL.

Design of the Model School.

The design of the Model School is to enable the teachers-in-training to see, in actual operation, a well-equipped, well-organized, well-taught school, and to afford them an opportunity for practical teaching under the direction of experienced teachers competent to see their faults, and faithful in pointing them out.

Course of Study.

The course of study in the Model is that prescribed for the first four classes in the Public School of this Province, with a certain amount of work added to suit the requirements of the Normal School and the class of pupils who attend. On an average the course can be completed in seven years. A large number of those who attend purpose continuing their studies in a Collegiate Institute or College. Hence, it is undesirable

2.—OTTAWA NORMAL AND MODEL SCHOOLS.

To The Honorable G. W. Ross, LL. D., M.P.P., Minister of Education,

Sir,—During the past year—1895—the usual two sessions of the Normal School were held, the first opening on the 15th of January and closing on the 13th of June; the second opening on the 20th of August and closing on the 19th of December.

One hundred and ninety-nine students attended the school during the year. Eighty-nine students—thirty-nine males and fifty females—attended during the first session: one hundred and ten students—fifty-two males and fifty-eight females—attended during the second session. The average age of the male students who attended during the year was twenty-three years, the average time of teaching experience, three years. The average age of the female students was twenty-one years; the average time of teaching experience, two and one-half years. Out of the one hundred and ninety-nine students, fifteen males and nine females held a grade of certificate above the Junior Leaving Standard.

The curriculum of study prescribed by the Education Department was closely followed. The “Professional” lecturers took up the subjects of psychology, history of education, school organization and management and methods generally.

In the case of “methods” it was found necessary to carefully review, from the standpoint of the scholar, the subjects of study, while dealing with them from the standpoint of methods of teaching them. Although all the students who were admitted held at least a Junior Leaving Certificate of Scholarship, this review was found to be absolutely necessary; so that, even in what is intended as purely professional training the non-professional aspect of the subjects must not be neglected.

Together with the professional subjects, the subjects of temperance and hygiene, agriculture, reading, writing, drawing, music, drill and calisthenics were taken up during each term. The Kindergarten Superintendent gave instruction twice a week—a lecture on Kindergarten principles and a drill on Kindergarten songs with accompanying physical exercise. Kindergarten work was treated before the students, as it should be treated, in its relation to and as a preparation for the ordinary class work in the Public School. In the psychology lectures and Kindergarten lectures “Child Study” was carefully followed. In deciding on the standing of the students at the close of each session all these subjects are taken into consideration.

Accompanying the professional lectures, during the early weeks of each session were “Model lessons” by members of the staff of the Model School. These lessons were given in presence of the students at certain necessary stages in the lectures. For example, when the principles underlying phonic reading were fully developed in class, the Model School teacher who has charge of the First Book class presented a model lesson exemplifying these principles, and so on, with the other subjects. At the close of the lesson the students were required, under the supervision of the Normal School Masters of Method, to set forth the plan followed by the Model teacher, to give the successive steps of the lesson, the object aimed at by each step, the relation of each step to the other steps and to the special end in view by the lesson as a whole. Every model lesson was thoroughly discussed in this way. By this means the students were enabled to observe model lessons in every subject of the Public School programme before being called on to teach. This was followed by “Model School Practice,” subject to careful supervision and criticism from the Model School staff and the Normal School masters. It is found that by the plan of “observation” shown above, the students enter on the work of practical teaching in the Model School with carefully prepared plans, and with additional power derived from these observations.

With such a programme as this, it has long been felt that the time placed at the disposal of the staff and students is altogether too short for efficient work. This was found to be especially the case during last session, where, in fifteen weeks the students were obliged to hurry over a course which for careful and effective development needs at least twice that time. The students themselves feel this, and the masters can present only the roughest outline or skeleton of a course, professionally well selected and laid out, and most valuable in itself as a training for the teacher, but losing its good effect in the hurried and imperfect manner in which it must be taken up. A session beginning in the early part of September and closing in the end of May would give the necessary time for efficient discussion of the important subjects of the curriculum. From September to December inclusive may be devoted to the discussion of principles and to "observation." The students, then, with immense advantage to themselves and to the classes put under their charge, can devote the remaining part of the session to well-considered and well-directed practice in teaching.

At intervals during the session two examinations were held on all the subjects of the curriculum—non-professional and professional. The answer papers were carefully read by the respective masters who made marginal criticisms on these papers, as well as general criticisms in class. The papers being returned to the students afford them an opportunity of seeing the weak points in their work. While it is found that the students are becoming more and more proficient in the use of classic English, a little weakness is still found in this respect. Indeed, very many of the marginal and class criticisms refer to the manner of expressing the thought, rather than to the correctness of the thought itself. There is still a great necessity for special care and exercise in English composition in our High Schools and Collegiate Institutes.

During the year, the students, by their conduct, observance of rule, and attention to duty, proved themselves worthy members of the grand profession in which they are engaged. This made government easy, and led to a harmony in aim and action on the part of masters and students most satisfactory to all concerned.

JOHN A. MACCABE,
Principal, Normal and Model Schools, Ottawa.

OTTAWA, 14th January, 1896.

APPENDIX O.—DEPARTMENTAL LIBRARY, 1895.

REPORT OF THE LIBRARIAN OF THE EDUCATION DEPARTMENT.

To the Honorable G. W. Ross, LL. D. M.P.P., Minister of Education.

SIR,—The following is my report of the operations of the library of the Education Department for the year 1895 :

1. Students' use of the Library.

The interest of the students and others in the library continues unabated ; and the consultation of books of various kind and works of reference is greater than it was last year. The purchases of additional books of a suitable kind for such a library has

contributed largely to this result. Last year, the number of books taken out from the library by students and other parties was 6,604. This year, the number taken out was 7,334; increase, 730. The details are as follows. Taken out in the

		1894.	1895.
Month of	January.....	375	354
do	February.....	609	804
do	March.....	585	1,034
do	April.....	991	627
do	May.....	694	633
do	June.....	322	354
do	July.....	47	223
do	August.....	48	100
do	September.....	344	415
do	October.....	1,010	1,130
do	November.....	1,039	1,063
do	December.....	540	597
		6,604	7,334

The increase in the number of books taken out from the library may also have been influenced by the fact, that the works relating to the various provinces have been largely augmented, and are now frequently consulted. It is gratifying to notice, in this connection, how greatly the issues from the press of Canada have increased during the last few years,—many of them of lasting value and interest.

In addition to the number of books in the library which have been consulted, the teachers and students of the Normal School and School of Pedagogy have also access to the periodicals and magazines, which are received at the library. The teachers of the Model School, as well as other teachers and the inspectors, also avail themselves of the advantages of the library.

The Catalogue of Educational Works and of General Literature in the library has now been completed. As soon as I can revise the material, which has been prepared for this catalogue, it will be ready for the printer. When published, this revised catalogue will, from its arrangement, be most convenient for reference. It has been constructed on the topical, as well as on the sectional plan,—that is, cross references to books and authors are given, and special subjects, such as psychology, etc., have been classified and arranged in groups, under distinctive headings.

The number of works under the head of “Canadian Books,”—that is, books relating to various subjects of Canadian interest, connected with the several provinces of the Dominion,—has increased so largely, since the first catalogue of this department of the library was published in 1890, that a new and revised catalogue of these books is a desideratum.

A library of this kind, if kept well supplied with works relating to Canada,—i.e., those issued in the past, as well as those published at the present,—would be of inestimable value to those desirous of consulting such works. I am gratified at being able to state, therefore, that the collection of books in this Canadian department of our library is of rare value, and, in some of the divisions, very extensive, although not quite complete. There are over fifty of the books in this department, that were published between the years 1561 and 1800,—and, of course, are original editions. Among them are works by the following old authors: Trevet, (1561); Theodat, (1615); Sageau, (1628); Boucher, (1663); De St. Valier, (1687); Milet, (1691); Orespel, (1757); Charlevoix, (1761); Dobbs, (1744); Ellis, (1748); Kalm, (1772); Rogers, (1769); Knox, (1769); Burke, (1758); Carver, (1778); Hearnese, (1795); Cartwright, (1792); Oughlan, (1776); Marriott, (1774); Burgoyne, (1780); Lynd, (1777); Symonds, (1778); Sheffield, (1786); Meares, (1790); Brant, (1787); Colden, (1792); Rochefoucauld, (1799); MacKenzie, (1800); Vancouver, (1800); Weld, (1800); MacKay, (1797); and Campe, (1798).

2. Books Purchased and Books Bound.

During the year 1895, 430 books in the various departments of the library, were purchased. These books chiefly relate to the subjects of education, to history and to science, as well as to Canadian history, etc. The number of such books purchased in 1894 was 257, so that the increase in this branch of the expenditure in 1895, has been somewhat in excess of that of 1894. The class of books purchased were those relating to the kindergarten, modern history and general literature.

The number of newspapers and magazines received at the library in 1895, was 15,379 newspapers and 74 magazines and periodicals. In 1894, the number was 14,678 newspapers and 68 periodicals, etc., so that the increase in this department of the library, in 1895, has been very slight. The additions have been chiefly in magazines and educational periodicals of a highly valuable and interesting character.

The number of books, etc., bound during the year was 141; last year the number was 136.

Our collection of pamphlets have been increased during 1895 by the number of 123. These, when classified with those now in the library and bound, will make a very valuable addition to the department of Canadian history, etc.

3. Official Reports on Education, etc., received in 1895.

The number of these interesting documents received at the library in 1895 has been somewhat in excess of those received last year, especially from the United States and from the provinces of the Dominion. These latter include compilations of school laws, etc. The numbers received from the various countries are as follows:

Great Britain and Ireland	19
Various provinces of the Dominion	31
Australasia:	
New South Wales	1
Victoria	2
Queensland	2
Tasmania	1
New Zealand	3
	— 9
Jamaica	1
British Guiana	1
Cape Colony	1
Japan	2
Montevideo	13
Costa Rica	5
Venezuela	7
Buenos Ayres	6
Various States of the American Union	39
	134

The number of the reports and documents relating to education which were received at the library from these various countries in 1894 was 96—increase 28.

Our collection of school reports and kindred documents—augmented as it is year by year—is now very large and varied. Those of the London School Board are very voluminous, and extend from 1879 to 1894. Those of the Regents of the University of the State of New York and of the Boards of Education in the New England States are

very valuable and suggestive. The successive reports and "circulars of information" issued by the United States' Bureau of Education at Washington are most comprehensive in their scope and character, and contain a mine of information on special subjects, and on education generally, which makes them of rare value to those who seek information on the matter to which the circulars and reports refer.

The collection of school reports of the individual States of the American Union is now very extensive. They and the other school reports are classified and arranged in alcoves for convenient reference.

The reports of the Privy Council on Education in England, and the school reports of Ireland and Scotland, take up quite a large space in our library. They are almost complete and from an early date. Reports of Royal Commissions which have been issued in England are also in the library, so that our information in regard to the state of education in the "Motherland" is both extensive and varied in its character.

I have much pleasure in stating that the work in the library has been most faithfully and efficiently performed during the year by my excellent assistant, Miss Crooks. I have also had, since June, 1895, a good deal of copying and other work done by Mr. Evans both promptly and satisfactorily.

4. *Historiography.*

I have now just completed the third volume of the "Documentary History of Education in Upper Canada." This volume brings the history of education in this province down to the year 1840—the last year of the separate and independent existence of the Legislature of Upper Canada. It is made the more valuable from the fact that it contains a number of able reports and documents which shed a flood of light on the proceedings of the Legislature in regard to education, and also on the efforts of the distinguished public men of the years which preceded the union of the Provinces of Upper and Lower Canada, in 1840.

The year 1839 stands out very prominently in this respect, not only for elaborate reports which were presented in that year to either House of the Legislature, and to the Lieutenant-Governor, but also for the character of the comprehensive measures submitted to the Legislature in that year. The most important report to the Lieutenant-Governor was that prepared under a commission issued by himself (Sir George Arthur) in October, 1839, directing a minute inquiry to be made into the condition and working of the public departments, and also into the "state of education in Upper Canada." The commissioners appointed to enquire into this matter were three gentlemen who for many years were members (and each of them a chairman) of the Council of Public Instruction, namely, the Honorable Samuel Bealy Harrison, Q.C. (judge of the County of York), the Very Reverend Henry James Grasett, D.D., Dean of Toronto, and the Reverend John McCaul, LL.D., President of the University of Toronto. The report prepared by these gentlemen is quite voluminous, and the "plan" suggested by them (as directed by the Governor) for carrying out their suggestions, elaborate in its details. In the appendix to their report they give the opinions and suggestions of the following prominent public men of the time, namely, Bishop Strachan; the Honorable Messieurs William Morris, Adam Ferguson, Peter Boyle de Blacquiére (subsequently Chancellor of the University of Toronto), and James Crooks, father of the first Minister of Education of Ontario; the Reverend Robert Murray, M.A., the first Superintendent of Education in Upper Canada, appointed in 1841; Mr. Mahlon Burwell (an active educationist) and Mr. (afterwards the Honorable) George Strange Boulton; the Reverend Messieurs John Roaf, of Toronto, and Robert McGill, of Niagara. This addition to the appendix to the commissioners' report makes it all the more valuable and suggestive.

The three volumes of the "Documentary History of Education in Upper Canada" now completed, embrace the period from 1790 to 1840.—or fifty years. The first volume

extends to 331 pages ; the second to 358 pages ; and the third to about 350 pages, or over 1,000 pages in all. Each volume is preceded by a full table of contents, and, at the end, by a copious index.

Copies of the second volume were sent, early in the year 1895, to a number of the most important Universities and libraries in the United States. It was also sent to all of the colleges and large libraries in the Dominion. As copies were, however, not sent to the press in this or the other provinces, no public notice of the work has appeared, so far as I know, except in one or two instances.

The labor of preparing this history has been far more arduous than I had anticipated when I undertook it, largely owing to the difficulty of procuring original reports and documents and of filling in the spaces between the record of the proceedings of the Legislature, the acts of the Governor and the proceedings of the King's College Council, etc., etc. In other words, the "missing links" in the narrative were often very difficult to obtain and to fit in. However, I have spared no pains to make the work as complete as possible ; its accuracy need not be doubted.

J. GEORGE HODGINS,

Librarian and Historiographer.

TORONTO, 16th January, 1896.

APPENDIX P.—MISCELLANEOUS.

THE HIGH SCHOOL LEAVING AND UNIVERSITY MATRICULATION EXAMINATIONS.

1. MEMBERS OF THE JOINT BOARD AND BOARD OF EXAMINERS FOR 1895-6.

JOINT BOARD.

Under the provisions of the Statute, No. 227, of the University of Toronto, the following gentlemen were appointed members of the Joint Board for 1895-6 :

By the Senate of the University.

The Hon. Edward Blake, M.A., LL.D., Q.C., M.P., Eng., Chancellor of Toronto University.

N. Burwash, M.A., Chancellor of Victoria University.

James Loudon, Esq., M.A., LL.D., President of Toronto University.

John Galbraith, Esq., M.A., Principal, School of Practical Science.

By the Minister of Education.

John Millar, Esq., B.A., Deputy Minister of Education.

John E. Hodgson, Esq., M.A., High School Inspector.

John Seath, Esq., B.A., do

Alex. Steele, Esq., B.A., High School Representative on the Senate.

BOARD OF EXAMINERS APPOINTED BY THE JOINT BOARD.

English, History and Geography :

A. Carruthers, M.A.

F. H. Sykes, Ph. D.

W. Tytler, B.A.

Mathematics :

A. R. Bain, LL.D.

John McGowan, B.A.

Alex. Murray, M.A.

Classics :

Peter S. Campbell, B.A.

H. J. Cody, B.A.

J. C. Robertson, B.A.

French and German :

L. E. Horning, Ph. D.

John Macgillivray, Ph. D.

W. VanderSmissen, M.A.

Physics, Chemistry and Biology :

R. B. Bensley, B.A.

C. A. Chant, B.A.

A. McGill, B.A.

F. N. NUDEL,
Registrar, and Secretary of the Boards.

ARCHÆOLOGICAL REPORT,

1894-95.

TO THE HONORABLE G. W. ROSS, LL.D.,
Minister of Education.

SIR,—In presenting you with this report of the Provincial Archæological Museum, it affords me much pleasure to state that the year has been an unusually prosperous one.

Several places were visited for the purpose of procuring correct information relative to earthworks, some of which remain intact. While it is desirable that these should be accurately surveyed, the cost of such work has stood in the way, and I have therefore confined myself to making measurements with the tape-line, taking angles in a rough way by means of a pocket compass, and preparing drawings which give some idea of the outline and proportions of the embankments. Two of these plans appear in this report.

Some noted places of aboriginal occupation or resort have been carefully examined, and numerous valuable specimens have, as a result, been added to the museum.

From one of two ossuaries opened in the township of Manvers, we secured fifty-seven crania; from one in Flos township eight, besides some good specimens of a rare form of wampum, and a few other articles.

One of the most important events of the year's work was the examination of rock-paintings on the shore of Lake Massanog, or Massanaw. This was facilitated through the courtesy of Mrs. McLaren, wife of the Hon. Peter McLaren, of Perth. Mrs. McLaren, who is much interested in matters archæological, not only made all necessary arrangements for reaching this somewhat out-of-the-way locality, but provided every convenience for examining the rude paintings on the rocks that form the shore.

To the same lady special thanks are due for her kindness in placing her steam yacht at my disposal for the purpose of examining a number of interesting village sites on Lake Rideau.

Owing to arrangements made early in 1895 the museum has been thrown more freely open to the public every afternoon during the week, as a result of which the attendance of visitors has greatly increased.

The number of specimens added to the museum since last report is fully three thousand five hundred.

Every foot of available space in the rooms kindly supplied by the Canadian Institute for the accommodation of the museum, is fully occupied—indeed, in many of the cases the specimens are much too crowded, and several rows of cases are so close together that two persons cannot pass each other in the spaces.

It is still to be regretted that the collection is exposed to great risk from fire.

Owing to the large number of recent accessions, a thorough re-arrangement of our material is now an absolute necessity—numbers should be painted on the specimens, and a complete catalogue should be prepared. This work, begun some years ago, would have been kept up but for the reason that the curator was desirous of becoming acquainted with the methods of classification adopted in large museums, before he expended many months of time and labor in doing what might require to be undone in the light of information gained from the experience of older institutions of this kind. Another reason for delay was based on the hope that before long more permanent and commodious quarters would be found for the museum, and that the handling incident to removal would also have served for re-arrangement.

I have the honor to be,
Yours respectfully,

DAVID BOYLE.

ACCESSIONS TO THE
ONTARIO ARCHÆOLOGICAL MUSEUM,

1894-1895.

While we are, as a matter of course, deeply indebted to the large number of ladies and gentlemen who have in one way and another enabled us to add so many valuable specimens since the date of last report, special thanks must be rendered to Prof. G. S. Ramsay, formerly Principal of the University of New Mexico, in Albuquerque, but who now resides at Fresno, California. Prof. Ramsay's gift is a valuable one, as may be seen from the appended list. On learning how desirable it is that we should have material from the New Mexico Pueblo country for comparison with that of our own province and other portions of the continent, he at once expressed his willingness to contribute towards this end, and in due course forwarded upwards of thirty excellent specimens, chiefly of Pueblo pottery, the largest of which is a handsomely formed bowl, eighteen inches in diameter, and nearly a foot in depth. All the other articles received from Prof. Ramsay are as interesting as they are valuable. Other Canadian abroad might do worse than attempt to emulate his admirable example.

Dr. S. H. Collins, of Lawrenceburg, Indiana, must also be numbered among those who have very materially befriended us. He has placed us in possession of his own private collection, numbering upwards of three hundred and fifty specimens, nearly every one of which is choice. The most valuable object in Dr. Collins' gift is a perfect, black clay bowl, bearing a diagonally, incised pattern of eastern slope type. This vessel was made by the last woman of an Arizona tribe, who possessed the art of making pottery according to old-time methods. The specimen is one of six she produced by special request, only a short time before she died. On former occasions we have been indebted to the genial doctor, and now we are more than ever under obligation to him.

To our friend, Dr. T. W. Beeman, and to his assistants, we are very much indebted, indeed; and we should name also as deserving of thanks, Mr. James S. Cairnduff, Mr. Robert Martin, Mr. Cyrenius Bearss, Mr. J. M. Irwin, Rev. A. G. Morice, O.M.A., Mr. F. W. Waugh, Mr. Hugh Nichol, Mr. C. H. Laidlaw of Aguascalientes, Mexico, Mr. G. E. Laidlaw, of the "Fort," Balsam Lake, and Prof. Carerra, of Los Cruces, New Mexico.

DR. T. W. BEEMAN, PERTH.

One small celt, an inch and three-quarters in length and three-eighths of an inch wide at the lip. This is the smallest specimen of its kind in the museum. Probably a toy. Lake Rideau.

One base of bone arrow-head or spear-head, Lake Rideau.

Four hatchets or celts, Lake Rideau.

Three felsite specimens, rudely chipped, Lake Rideau.

Forty chert specimens, arrows, scrapers, etc., Lake Rideau.

One small disk of Hudson River shale, perforated, Lake Rideau.

One rudely formed quartzite spear, Lake Rideau.

Two fragments of large jasper scraper, or spear, Lake Rideau.

One peculiarly formed chert scraper, Lake Rideau.

One oval bone pendant, Lake Rideau.

Two oval specimens of fine micaceous schist, apparently in preparation for pendants, Lake Rideau.

One bone needle or awl, six inches long, Lake Rideau.

The following is a list of Dr. Beeman's coadjutors with their contributions, mostly from the County of Lanark.

MR. ROBERT BLAIR.

One gouge, twelve inches long.

One large amulet.

MR. GEORGE HONE.

A large number of flints, celts, rubbing-stones, etc.

MR. DICK CARPENTER.

Fifteen flints from Plum Point, and various miscellaneous specimens.

MR. WM. McLAREN.

One felsite implement—very rude.

Twenty-five flints, and numerous specimens of different kinds, including rubbing-stones and slate objects.

MR. R. C. McLAREN.

Four rubbing-stones.

Eighteen flints.

Four celts.

MR. JAMES PETERS.

One slate spear or knife.

One amulet (broken).

MR. DAVID LEPPER.

One double-ended celt or hatchet.

Three common celts.

MR. EDWARD TILT, NEWBURGH.

One flint scraper or knife.

DR. J. P. VROOMAN, YARKER.

One gouge.
One flint drill.

MR. WM. DUNLOP.

Two plain celts.
One tally-stone (slate).

MR. J. W. BORROWMAN.

Three plain celts.
One copper amulet.

MR. JOHN COUTTS.

One rubbing-stone.

MR. ARTHUR LOVE.

One flint arrow.

MR. M. TOVEY.

One large slate (woman's) knife.

MR. JOHN E. GLOVER.

One chisel-gouge.

MR. JOHN MCGUIRE.

Two celts or hatchets.

MR. JOHN ATCHESON.

One semi-circular slate (woman's) knife.

MR. HUGH ROBERTSON.

Two double-ended celts, or hatchets.

MR. PETER STEWART.

One small gouge.
One large gouge.
Two slate knives.
Several arrow points.
Four celts or hatchets.
One rubbing-stone.
One mealing stone—very good.

MR. WM. ROTHWELL.

One gouge.

MR. DANIEL McEWEN.

Two celts or hatchets.

MR. ROBERT McEWEN.

One copper spear.

MR. GILBERT BEEMAN, NEWBURGH.

One small celt, from Napanee River.

One very large and fine celt.

MR. LEO JARBEAU.

One very small arrow-point.

MR. T. B. CALDWELL.

One clay pipe.

One clay pipe-stem.

Several fragments of pottery.

MR. S. STEVENSON.

One flint arrow-head from Falls of Montmorenci, Quebec.

MR. JOHN McEWEN.

One celt or hatchet.

One exceedingly fine red, slate gouge.

MR. THOS. HALEY.

One red, slate gouge.

MR. SAMUEL WILSON.

One soapstone pipe.

MR. A. B. BUDD.

One large, slate gouge from Calabogie Lake.

MR. J. C. McLEAN.

One sandstone gouge.

MR. E. PLAYFAIR.

One arrow-head of peculiar form.

MR. JOHN RICHARDS.

One celt or hatchet.

MR. EDWARD CAVANAGH.

One perfect flint arrow-head.

One flint knife.

MR. HUGH NICHOL, STRATFORD.

Seven unfinished slate tablets.

One roughly flaked tool.

One water-worn pebble partly pecked into shape.

DR. CHAS. B. TWEEDALE (formerly of St. Thomas, Elgin County).

One small mealing stone, well-hollowed, Elgin county.

One rough stone celt, nine inches long, rubbed smooth at the sharp end, Tennessee.

One grooved axe, nine inches long, Elgin County.

One grooved axe, six inches long, Elgin county.

One grooved axe, six inches long, Elgin County.

One adze, six inches long, two inches wide, showing deeply worn binding marks, Elgin County.

One double-ended celt, of fine black stone, highly finished, Elgin County.

One good gouge, five inches long, two and a half inches wide, Elgin County.

One gouge, slightly imperfect.

One good, grey granite celt or hatchet.

One large, plain celt, seven inches long and three inches wide, Elgin County

Three clay pipes, perfect, Elgin County.

One heavy, plain clay pipe, Elgin County.

One small, square clay pipe of unusual pattern, perfect, Elgin County.

One three-sided, stone pipe, with engraving of a turtle, perfect, Elgin County.

One clay pipe with flaring bowl, Elgin County.

One pipe-stem, four inches long, ornamented, Elgin County.

One stone pipe, rare form, perfect, Elgin County.

One stone pipe, very fine bird form, perfect, Elgin County.

One stone tube, five inches in length.

One banner-stone, perfect, Elgin County.

One bead, mottled, blue, three and a half inches long, Elgin County.

One bird amulet, four inches long, Elgin County.

Four sinkers, Lake Erie shore, Elgin County.

One highly polished celt, seven inches long, Elgin County.

- Ten plain celts, various sizes, Elgin County.
- One catlinite pipe of recent manufacture, N. W. Territory.
- One clay pipe head, stem broken, Elgin County.
- One brown chert implement, seven inches long, and very finely made, Kentucky.
- One quartz spear head. fine, Kent County.
- One small slate pendant, perfect, Elgin County.
- One fine chert spear, four and a half inches long, Elgin County.
- Two fine chert knives, perfect, Elgin County.
- Seventy-five spear and arrow heads, many of unusual forms, Elgin County.
- Three spear heads, about four inches long, perfect, Elgin County.
- One slate gorget, with four holes, Elgin County.
- One sandstone gorget, hole partly drilled, Elgin County.
- One large bone awl, with hole bored in the head, Elgin County.
- Six small bone awles or needles, Elgin County.
- One gouge, ten inches long, with deep groove, Elgin County.
- One stone chisel of graceful form, one end broken, fifteen inches long, Elgin County.
- One unfinished stone pipe, Elgin County.
- One limestone pipe, blackened, Elgin County.
- One catlinite pipe, old form, Minnesota.
- One bird-shaped stone pipe, well carved, Southwold township.
- Thirteen clay pipes, mostly imperfect, Elgin County.
- Two stone pipes, “
- One stone pipe on which a turtle is engraved, “
- Nine tablets or gorgets of slate, “
- Two pendants or ear-drops, slate, “
- One ceremonial stone (butterfly form), “
- One ceremonial stone (double pointed), “
- One ceremonial stone (horn-like), “
- One bird amulet, very flat, “
- Two slate tubes, “
- Three rough “sinkers,” “
- Three unfinished slate specimens, “
- One chisel-like stone, well made, fifteen inches long, “
- One small mealing-stone, “
- Five plain bone needles, “
- One bone needle with suspension hole at large end, “
- One blunt bone tool, “
- Four large fragments of pottery, “
- Twenty rudely formed flints, “
- Twenty-two flints with wedge-shaped butts, “

Three leaf-shaped flints,	Elgin County.
Three slightly necked flints,	"
Twelve flint scrapers,	"
Sixty flints, all fine, from one inch to five inches long,	"
Three drills,	"
Thirty-two stone axes and adzes, plain,	"
Three grooved axes,	"
Four miscellaneous,	"

PROF. G. S. RAMSAY, ALBUQUERQUE, NEW MEXICO.

- One Pueblo clay bowl, eighteen inches in diameter, from Isleta, N. M.
 Four Pueblo clay bowls from Jemez, N. M.
 One Pueblo clay bowl from San Dominica, N. M.
 One Pueblo clay pitcher from Cochita, N. M.
 One Pueblo clay bowl from Isleta, N. M.
 Two Pueblo clay drinking cups, Cochita, N. M.
 Two Pueblo clay drinking cups.
 Five Pueblo clay bird-forms,
 One rude bird-form in stone, New Mexico.
 Four shallow clay vessels, Pueblo, N. M.
 Five imitations (perhaps *fac similes*) of ancient pottery.
 One Indian drum, Pueblo, N. M.
 One Madonna of wood and cloth, from old church in Pesos, N. M.
 One painting of a saint from the old church of Acoma, N. M.
 One small cross ornamented with straw pattern from church of San Miguel,
 N. M.
 One piece of obsidian, N. M.

MR. C. H. LAIDLAW, HILLSBORO, NEW MEXICO.—(*Exchange*).

- Two Pueblo clay bowls.

MR. J. S. CAIRNDUFF, HARVEY TOWNSHIP, PETERBOROUGH COUNTY.

- One clay bowl, almost perfect, from Harvey township.
 Numerous fragments of pottery showing patterns.
 One small human head, clay.
 One limestone tool, apparently in process of being made into a gouge.
 Nine imperfect stone hatchets, or axes.
 One part of large bone awl marked with lines either for ornament or as a record.
 Seven fragmentary clay pipes.
 Six miscellaneous bone specimens.
 One large and very good mealing stone of gneissoid material, and deeply hollowed on upper and lower sides.

MR. J. M. IRWIN, PETERBOROUGH.

One large, and fairly perfect clay vessel from north shore of Clear Lake.

PROF. CARERRA, LOS CRUCES, NEW MEXICO.—(*Exchange.*)

One metate, mealing-stone or mortar.

One red, gneiss axe, peculiarly grooved. Has latterly been used as a pounder, or hammer.

N. W. UNIVERSITY, CHICAGO.—(*Exchange.*)

One mortar, mealing stone, or stone bowl, from Missouri.

One grooved axe, Illinois.

One small, grooved axe, Indiana.

One very fine, grooved hammer, South Dakota.

UNITED STATES NATIONAL MUSEUM, WASHINGTON.—(*Exchange.*)

One metate, Pueblo, Arizona.

One mortar, California.

One small stone bowl, California.

One stone baking plate, California.

Two fragments of serpentine bowls, California.

Three fragments of steatite bowls, California.

One rude steatite vessel, Rose Hill, District of Columbia.

One slab with mortar-like cavity, Maryland.

Four pestles from California.

One pestle, Oregon.

Two pestles, Pennsylvania.

One pestle, Connecticut.

One pestle, Georgia.

One pestle, Tennessee.

One hammer-stone, Kentucky.

One " Pennsylvania.

One " Tennessee.

One " Ohio.

One " Georgia.

One grooved axe, Kentucky.

One " Connecticut.

One " Georgia.

One " Ohio.

One " Illinois.

One " North Carolina

One " Pennsylvania.

One grooved axe, Indiana.
One polished hatchet, North Carolina.
One polished hatchet, Ohio.
One polished hatchet, Georgia.
One polished hatchet, Connecticut.
Three polished hatchets, Tennessee.
Thirty-seven rude quartzite implements, surface finds, District of Columbia.
Fifty arrow heads, Atlantic coast.
Fifty arrow heads, Ohio and Mississippi valleys.

MR. T. W. ROBINSON.

One small stone bowl, or pot, with three feet, and two perforated lugs.
One very fine discoidal stone, Lee County, Virginia.
One steatite pendant, grooved and bored, Lee County, Virginia.
Twelve small arrow heads, Lee County, Virginia.
Twelve scrapers, Lee County, Virginia.
One large sandstone pipe, Duffield, West Virginia.

MR. MORRILL HARPER, GUILFORD, INDIANA.

One very good spear-head.
Three flints of usual type.

MR. F. CADDY, TORONTO.

One fine, bar amulet, imperfect ; Healy's Falls.

MR. JOHN BAY, (WAHSATCH).

One Modern Indian workman's knife.

MR. W. MACNAMARA.

One large, roughly quadrangular flint ; Etobicoke.

MRS. J. W. ANNIS. (Collection made by the late Rev. J. W. Annis, M.A., chiefly in the "Huron Country" Simcoe County.)

Four slate tablets.
Five slate tablets, imperfect.
One slate tablet, partly made.
One clay pipe-bowl of very unusual form.
Four square mouthed pipe-bowls.
One owl head pipe-bowl.
One fox (?) head pipe-bowl.
Seven clay pipes of various patterns, more or less imperfect.
One white stone pipe.

One stone tube-pipe.
 One piece of slightly carved soapstone.
 One half of a long, curved "ceremonial" stone.
 Twenty-five scrapers of chert.
 Twelve rude flints.
 Eighty flints of various forms and sizes.
 Seven small rubbing stones.
 Twenty stone adzes.
 Twelve stone axes.
 Three stone chisels.
 Five unio shells that have been used as scrapers.
 One small earthenware vessel, apparently moulded on the end of a finger.
 Fifty fragments of pottery bearing patterns.
 One stone disk, one and-a-half inches in diameter, perforated.
 Two stone disks, one three-quarters of an inch, and one an inch in diameter each marked with a cross.
 Eleven hammer stones.
 Twenty bone awls, mostly imperfect.
 One bone pendant.
 Three bone pins, two inches long, rounded at the ends.
 Ten bone beads.
 Nine miscellaneous bone and horn specimens.
 Three femors.
 One lower jaw ; human.
 Some charred Indian corn.
 Seventeen iron and copper specimens of European manufacture.

DR. M. I. BEEMAN, NEWBURGH.

One small soapstone pipe—imperfect, found on shore of River St. Lawrence, near Brockville.

MR. ALEX. PARKS.

One grooved stone hammer, Renfrew County.
 Eleven plain celts or hatchets. " "
 Three gouges. " "
 One semi-circular, woman's knife. " "
 Two slate tablets, unfinished. " "
 Three small arrow-heads. " "
 One soapstone pipe, Lanark County.

MISS ELIZABETH PEACE THOMPSON, CANNINGTON.

One large, thin, and very fine gorget—two holes.

MR. FRANK WINTEMBERG, WASHINGTON, ONT.

One gorget or tablet of slate—two holes.

One imperfect cubical stone of unknown use. See figure 63.

MR. WM. MATHESON :—From Middlesex and Perth Counties.

Eight gouges.

Ten grooved axes.

Two hundred and sixty plain axes.

Twelve imperfect pestles (?)

Two grooved hammers.

Twenty-six hammer stones

Three iron pipe-tomahawks.

Thirteen plain iron tomahawks.

Forty gorgets or tablets of slate, (perfect).

Ten gorgets or tablets of slate, (imperfect).

Three stone pipes.

Four clay pipes, (imperfect).

Three ceremonial stones (butterfly form).

Four ceremonial stones (double pointed).

Three bird amulets.

Five stone tubes from two to six inches long.

One slate ornament of unusual form, pendant?

One flint, eight and a half inches long.

Thirteen flints from four to six inches long.

Four hundred and eleven common flints.

Fifty-two miscellaneous.

Two pieces of native copper, found as drift, in West Williams township.

One head-dress of beads and feathers.

One head-dress of hide and horns.

One North-west catlinite pipe and pipe-stem.

One modern war-club of wood.

One turtle rattle.

One small tom-tom or drum.

Twelve British Columbia arrowheads.

FROM SMALL OSSUARY ON FARM OF MR. ARCHIBALD BOWMAN, TOWNSHIP OF
FLOS, SIMCOE COUNTY.

Eight skulls—four with lower jaw, and otherwise nearly perfect.

Numerous limb bones.

One small French copper kettle.

One fragment of copper kettle with portion of deer-skin in which the kettle had been wrapped.

Twenty-eight quadrangular shell beads averaging about an inch in length, and $\frac{3}{4}$ of an inch in width, of the rare variety known as "runtee"—bored lengthwise.

Six French, iron tomahawks.

One clay pipe.

One good fragment of pottery—all that was in the ossuary.

FROM AN OSSUARY ON MR. SYERS' FARM IN MANVERS TOWNSHIP, DURHAM COUNTY.

Fifty-seven skulls in good state of preservation, numerous limb and other bones.

BY PURCHASE.

One North-west leather jacket, richly ornamented with beads.

One pair leather trousers, richly beaded.

One pair finely beaded moccasins.

MR. GEO. C. PEACOCK.

One small chert drill—Malahide township, Elgin County.

One peculiarly flattened, clay pipe. " "

MR. R. D. GEORGE.

One imperfect clay pipe—snake pattern, Markham township, York County.

REV. A. G. MORICE, O. M. I., BRITISH COLUMBIA.

Two ceremonial or dance wigs used by the Dènè Indians, near Stuart's Lake, British Columbia.

MR. W. J. DUNLOP.

One set of ivory bolas (5 pieces) from Alaska—used to catch birds on the wing.

COLONEL JOHN W. HALL, U. S. ARMY.

One lariat of horse-hair, used on the western plains.

MR. B. F. SHARPE, N. DORCHESTER TOWNSHIP, MIDDLESEX.

One clay pipe bowl.

One banner stone (butterfly) form.

One tablet or gorget—two holes.

One fine small arrow-head.

MR. WM. SADLER, N. DORCHESTER TOWNSHIP.

One large, curved, leaf-shaped flint.
One red, slate gorget—one hole.
One chert drill.

MR. W. JULL.

Seven fine arrow-heads.
One steel spear-head.

MR. ROBERT MARTIN, SCARBOROUGH, YORK COUNTY.

Four fine flints.
One "woman's knife," chipped and ready for being polished.
Two good stone axes.
Two fragments of pottery.
One small soapstone pipe.
One circular, deeply pitted, and well formed hammer-stone.

MR. GARNET PAGE, BERTIE TOWNSHIP, WELLAND COUNTY.

One clay pipe, very small and well made.

MR. PHILIP SMITH, HUMBERSTONE, WELLAND COUNTY.

One stone pipe, dark red.

MRS. JOHN TROUP, HUMBERSTONE TOWNSHIP, WELLAND COUNTY.

One stone gouge.
One slate, tube amulet, with side groove.

MR. CYRENIUS BEARSS, HUMBERSTONE TOWNSHIP, WELLAND COUNTY.

Two stones adzes, with chamfered backs.
One large flint.
One small mealing-stone, (?) one side of this specimen is quite smooth, while the other side is rough as if it had been used as a chipping-block, or stithy.
One globular hammer-stone.
One flat and quadrangular hammer-stone.
One finely worked stone in course of preparation for some tool.

PROF. J. A. CLARK, WINCHESTER, TENNESSEE—(*Exchange.*)

One clay pipe.
One skull.
Fifty arrow-heads.

MR. McKENNY.

One clay pipe, from Christian Island, Georgian Bay.

DR. T. W. BEEMAN, PERTH, LANARK COUNTY.

One copper spear-head.

One copper tool or ornament of unknown use.

DR. DOUGLAS, ROMEO, MICH.

One tablet or gorget.

MR. HORATIO N. RUST, S. PASADENA, CALIFORNIA.—(*Exchange.*)

One mealing-stone or metate, California.

One small grooved axe, Madisonville, Ohio.

Thirty-five good arrow-heads—quartz, chert and red jasper, Ohio.

One flint axe, Tennessee.

Two large spear-heads of chert, Tennessee.

One model of Klamath River, Indian canoe, North California.

DR. FREEMAN, CHICAGO.—(*Exchange.*)

One stone pipe—old type—Ohio.

One stone pipe—tube form—Ohio.

One stone pipe, unfinished, of quartzite, Ohio.

One stone pipe, unfinished, platform pattern, Ohio.

One stone pipe, unfinished, tube pattern, Ohio.

Two semi-ovate grooved stones of unknown use, corresponding in size and form to specimens from Indiana.

Two semi-spherical well finished stones of unknown use.

Ten discoidal stones, two from an inch to two and a half inches in diameter Clark county, Ohio.

Two large naturally rounded stones, slightly pitted in the centre of each side, Illinois.

Five good pestles—some much worn, from Ohio.

Fourteen grooved axes from Indiana and Kentucky.

MRS. CARPENTER, CHICAGO.—(*Exchange.*)

One very fine stone pipe, from Wisconsin.

PROF. GREEN, INDIANAPOLIS.

Two imperfect bone gorgets of unusual form, from mounds in Clarksville, Ohio.

One bone tube, Clarksville, Ohio.

One unfinished stone pipe, Ohio.

One stone (part of pipe-stem) partly bored by means of a reed or other tube, showing the core), Ohio.

MR. T. B. STEWART, LOCKHAVEN, PENN.

One small, stone stithy, or chipping-block, Pennsylvania.

MR. WM. NIVEN, NEW YORK, (AZTEC RELICS, MEXICO.)

Two hundred and thirty small terra cotta specimens, consisting mainly of human heads—others represent heads of various lower animals, including mammals, snakes and birds.

Twenty-five statuettes from two to six inches high.

Two statuettes twelve inches high.

One richly ornamented pitcher, with elegant handle. On this vessel are modelled three human faces—one in front has a dark mineral inlaid to form the eye orbits.

One tripod plate (red clay.)

Thirty-three pottery vessels of various forms and sizes, from one inch to ten in diameter, and mostly bearing patterns worked in black. In two, the lines forming the pattern are depressed; in one, the design is in white; a few are quite plain.

Nine clay specimens, each having two holes. The use of these is uncertain, and I have been unable to see any reference to such in any book I have examined.

Two terra-cotta whistles, apparently in form of conventionalized human skulls.

Three terra-cotta seals or stamps, bearing richly worked patterns in high relief.

Twenty-two spindle whorls, in terra cotta.

Fifteen circular clay counters (?)

Two sinkers (?), terra-cotta.

One clay ring.

One large clay pipe (dubious as to its antiquity).

One jade pendant.

Three jade beads.

One jade amulet.

One jade triangular pendant.

One jadeite idol or charm.

Three jadeite beads.

Seventeen rude beads or counters.

One small black stone mask.

One alabaster ornament.

One chisel of chalcedony.

One axe of trachyte.

One small rubbing stone.
Forty small shell beads.
Three large shell beads.
One labret of obsidian.
Thirty arrows of obsidian.
Fourteen whole and fragmentary obsidian knives.
Three obsidian cores.
One obsidian circular ornament.
Seven stone idols from ten inches to twenty-six inches high.
One large stone vessel, hollowed at both ends, (hour-glass form.)
One tripod stone bowl.
One stone vessel with human figure carved on one side.
One stone head of mountain goat.
One large stone frog.
One large stone snake (coiled).
One large human mask.
One small human mask.
Several miscellaneous specimens.

MR. ALLAN CASSELLS.

Three specimen of modern Mexican pottery.

MR. WEIRS, CHICAGO.—(*Exchange*.)

One stone from Missouri, bearing three pits about an inch in diameter.

Sixteen beautiful specimens of Pueblo pottery, the largest being fourteen inches in diameter, and of graceful form. Four are bowls, ten inches in diameter. Three are animal forms. One is a narrow-necked *olla* or water-jug on which are modelled three bird-forms about two inches high. Three are deep bowls from four to five-and-a-half inches in diameter. All these are of light colored ground, and are ornamented with designs in red and black.

One spherical red clay rattle, four inches in diameter, with black pattern.

Three black, Zuni, basket-handled vessels.

Eleven small modern specimens of New Mexico, Indian pottery.

One cliff-dwellers' clay vessel.

MR. CLARENCE B. MOORE, PHILADELPHIA, PA.—(*Exchange*.)

One celt coated with iron oxid, from Mandarin Point, Florida.

One celt of shell (*Strombus gigas*), Putnam Co., Florida.

One digging-tool made from shell of *Fulgur carica*, Volusia, Florida.

Five arrow-heads, Florida.

MR. HERBERT JOHNSTON, PEPPERLAW, YORK COUNTY.

One olivella (sp ?)—part of a number found together, and ground at the end to admit a thread.

DR. S. H. COLLINS, LAWRENCEBURG, INDIANA.

Eight pestles from Warren Co., Indiana, and Hamilton Co., Ohio.

Twenty-nine plain celts or axes from Warren Co., Indiana, Hamilton Co., Ohio, and Boone Co., Kentucky.

Four small, plain, specimens of hatchet form, possibly for insertion in wooden club heads.

Six grooved axes from neighboring counties in Ohio, Indiana and Kentucky

One small hammer-stone, Boone Co., Ky.

One broken banner-stone, Warren Co., Ind

Two small paint cups (?), Miller Co., Ind.

Fifty-three rough or "reject" flints.

One hundred and one barbed and semi-barbed flints.

Ten long and neckless flints.

Sixteen flints with round-based necks.

Fifty-four flints of various patterns, and all perfect in form.

Fifty-nine triangular flints—mostly small.

Three flints, chipped from one side—of the type known as "rotary."

Eight imperfect flints.

Eight serrated flints.

Eight drills.

(The "flints" vary in size from an inch to five inches in length, and many of them are absolutely perfect. They are of quartzite, chert, flint, chalcedony, and red and yellow jasper.)

Three good fragments of pottery, Warren Co., Ind.

One beautiful bowl of black pottery-ware, ornamented with incised lines made by an Indian woman in Arizona—said to have been the last woman in the tribe who understood the ancient art of making pottery.

One tear-vase from Rome, Italy.

MR. C. J. B. RAJEN, LAWRENCEBURG, INDIANA.

One grooved stone axe, Dearborn Co., Ind.

MRS. J. S. CULVER, SPRINGFIELD, ILL.—(*Exchange.*)

One large leaf-shaped flint, Jerseyville, Ill.

One fine, long-necked spear head, Jerseyville, Ill.

REV. MR. WESTERVELT, CHICAGO.—(*Exchange.*)

Two very small arrow heads, Colorado.

DR. A. P. COLEMAN, TORONTO.—(*Exchange.*)

Two obsidian tools, Napa County, California.

MR. T. H. POWELL, LONDON, ENG.—(*Exchange.*)

Three flint scrapers, Beechey Head.

One flint celt, Southdowns, near Beechey Head.

One flint celt, Eriswell, near Warren Hill, Suffolk.

Two flint chisels (broken), Beechey Head.

One portion of polished celt, Beechey Head.

One rough flint, North Stoke, Oxfordshire.

Two scrapers, flint. North Stoke, Oxfordshire.

One flint celt, Icklingham, Suffolk.

One celt, originally polished, afterwards broken and re-fashioned, Wold Newton, Yorkshire.

Six Arrow-heads, near Grimm's Dyke, Oxfordshire Hills.

Four flint flakes, Suffolk.

DR. DOUGLAS, GRAND HAVEN, MICH.—(*Exchange.*)

One small, well-formed celt, Lockport, N. Y.

MR. F. W. WAUGH, TORONTO.

Seven adzes and chisels, Tuscarora, Brant County.

One adze, field near Brantford.

One club-blade (?), near Brantford.

One celt of unusual form, Cedar Swamp, near Brantford.

Two chisels or small celts, banks of Grand River, near Brantford.

One large, plain adze, south of Brantford.

Two large, plain axes, Tuscarora, Brant County.

One double-pointed stone tool, Tuscarora, Brant County.

Eleven neckless, or shankless flints, Brant County.

Twelve large flints, Brant County.

Two hundred and fifty flints of various sizes, and from various localities in Brant County.

One well carved bird's head, from a stone pipe bowl, near Brantford

One flint knife, or scraper, "

One rubbing-stone, "

Two ornaments—ear-drops (?), of unio shell, "

Thirteen land shells (helices), perforated for stringing, "

One piece of conch, slightly engraved, "

Seven pieces of conch, partly worked for beads and pendants, "

One bone tube, or small case, rectangular in cross section, "

-
-
- Eighteen small bone pins, both ends rounded, near Brantford.
 - Sixteen bone beads, “
 - Eleven bones, bearing tallies or record-marks, “
 - Two engraved bones, “
 - Four bone awls, “
 - Three pieces worked deer horn, “
 - One deer horn arrow-straightener, “
 - Five hammer-stones, “
 - One piece of Hudson River shale used as a rubbing-stone, contains five parallel grooves, near Brantford.
 - One neatly formed animal (fox ?), head from bowl of clay pipe, near Brantford.
 - Seven clay pipe heads, stems broken, “
 - Numerous fragments of pottery, “
 - Two maple sap troughs of birch bark, Manitoulin Island.
 - Three maple sap buckets, Manitoulin Island.
 - Two maple sap spiles, Manitoulin Island.
 - One maple sugar cake mould. “
- (Articles like these are used by the Ojibwas on the Manitoulin and north shore reserves at the present day.)

MR. G. E. LAIDLAW, VICTORIA ROAD.

- One celt or axe, Bexley Township, Victoria County.
- One celt, degraded to hammer, Bexley Township, Victoria County.
- One mealing-stone of gneiss, Bexley Township, Victoria County.
- One small and imperfect disk, Bexley Township, Victoria County.
- One piece of graphite, village site, Bexley Township, Victoria County.
- One piece of worked chert, “
- One copper spike, twelve inches long, Kaministiquia River, Thunder Bay District.
- One copper knife, Bolsover, Eldon Township, Victoria County.
- Numerous flints, Bexley Township, Victoria County.
- One piece of slightly worked micaceous schist, Victoria County.
- Eleven bone awls or “needles,” Bexley Township, Victoria County.
- One tomahawk catlinite pipe, Fort Q'Appelle, N. W. Territory.
- Three modern pipes, Manitoba.
- One large catlinite pipe (old type), N. W. Territory.
- One limestone pipe (modern), repaired with lead, N. W. Territory.
- One woman's pipe (Piegan Indian), Fort McLeod, N. W. Territory.
- Three very fine vase-formed pipes, Eldon Township, Victoria County.
- One unfinished platform pipe (broken), West Bay, Balsam Lake.

One large stem of stone pipe, Balsam Lake, Bexley Township.

One square-mouthed clay pipe, Bexley Township.

Several fragments of pottery from village sites, lots 5 and 6, con. 2 Bexley.

FROM OSSUARY, ON FARM OF MR. SYER, MANVERS TOWNSHIP, DURHAM COUNTY.

Fifty-seven skulls, mostly in good state of preservation.

MR. EDWARD HANNA, JANETVILLE, DURHAM COUNTY.

Two celts or hatchets.

MR. A. B. CLIFFORD, JANETVILLE.

One rudely formed, double ended celt.

MR. HAMPDEN BURNHAM, PETERBOROUGH.

One small and well-made copper, "ghost arrow."

PROFESSOR CARERRA, LOS CRUCES, NEW MEXICO.—(*Exchange.*)

One very valuable and peculiarly grooved stone axe, of red gneiss, White Oak Mountains, New Mexico.

One large and fine mealing-stone, New Mexico.

MR. R. HAY, JUNCTION CITY, KANSAS.—(*Exchange.*)

Two stone hammers, Geary County, Kansas.

One peculiarly grooved or hollowed rubbing-stone, Geary County, Kansas.

Nine flints from mouth of Chisholm Creek, Kansas.

MR. A. STEVENSON, B. A., ARTHUR.

One piece of catlinite in crude form, from Pipestone quarry, Minnesota.

(This is the material from which the famous red pipes were made).

MR. W. S. SHERWOOD, TORONTO.

One oil painting of Ojibwa Indian woman (daughter of Big Canoe, Snake Island), from sketch made at Big Canoe's house, 1883.

MR. T. MOWER MARTIN, TORONTO.

One photograph of Indians breaking up camp.

One oil painting—Indian life.

PRIMITIVE INDUSTRIES AND WORKING METHODS.

To study the method by means of which any object of aboriginal manufacture has been produced is second only in importance to ascertaining the *purpose* of the object—indeed, it may be that an examination of working methods in one case will sometimes supply hints as to the application of certain other articles, whose use has been doubtful. Mechanical and industrial development necessarily accompanies ethical evolution (is, in fact, a constituent of it), notwithstanding some apparent exceptions that may be cited. Experience tends towards improved operative methods, and advancement in taste demands superior quality of workmanship. Even in the stone age numerous mechanical arts were successfully practiced. Of course, this could be done only in a very simple or primitive way, and yet, here and there, all over the world, we find the prototypes of many arts and industries in vogue at the present day. Our modern hammers, axes, chisels, knives, gimlets, drills, files, saws, and even turning-lathes may be traced to one and another early devices in stone, and as each primitive implement and ornament was produced by means of other forms in stone, it becomes interesting as well as instructive to follow the methods of workmanship employed by the primitive artisans.

It would be impossible to name with assurance the first kind of mechanical art performed by man in his lowest condition, but it is quite safe to place that of hammering as among his earliest attempts to secure animal food, or, having secured it, to break it up. If we concede priority to the use of stones as missiles, the effect of a successful throw may well have suggested immediate action in employing the stone to pound or hammer. However this may be, one of the most interesting of archaeological finds is that of the hammer-stone. Destitute of beauty in outline or texture, it was nevertheless well adapted for the purpose in view. A little experience would suffice to teach that all stones were not of one quality, and to enable the ancient hunter or workman, feeble as his intellect probably was, to select the hardest, most durable material, and we find accordingly that with few exceptions even the rudest hammer-stones are of silicious quality. Many of them appear to have been chosen on account of some point, or angle, or edge on the surface that enabled the worker to concentrate his blow, when using the stone as a tool.

Stones of this description bear the very clearest evidence of their application, for the portions referred to are roughened by repeated blows on the material the stones were employed to break, or by means of coming in contact with the stithy-stone supporting the article to be broken. Here, too, comes in the suggestion that the stithy-stone or block—specimens of which are not uncommon—must also have been an early device, slightly subsequent to that of the hammer, supplying an unyielding bed for effective strokes on bones, nuts, shells, wood, and even on animal tissue. With advanced skill in the use of tools, less refractory material was sometimes taken for hammers, and considerable labor was expended in reducing it to a regular shape—generally disk-like, and with a shallow pit on each side enabling the worker to grasp the implement more firmly. Nor unfrequently round or ovate, lenticular, water-worn stones were selected and with or without the finger-pits were used as hammers, if we may judge from the battered appearance presented by their edges. Stones of this kind appear also to have been employed as stithies, one or both sides of them bearing deep, elongated

markings as if the result of heavy blows from a sharp tool passing beyond the object in process of being worked upon them. It is reasonable to suppose that silicious chips of various kinds were sometimes held in one hand as chisels while hammer strokes were applied to them from the other, but, as might be expected, there is no direct evidence to this effect. The cleft or cut-like marks in the stithy-blocks may be accounted for by the employment of such tools.

The hammers referred to were all haftless, and for light work such as blocking-out "flints," or breaking bones and nuts, the want of a handle would not be felt. It was only when comparatively settled modes of life were adopted, demanding heavier tools and correspondingly ponderous blows to drive stakes in the construction of shelters and defences, to use on wedges in splitting wood, and to carry on rude methods of mining to procure chert, soapstone, slate and copper, that the application of a handle suggested itself. In America this was effected by means of laboriously cutting a groove round the stone-head sometimes almost midway, and sometimes about two-thirds of the distance from the face, to afford a "seat" for a strip of rawhide by which handle and head were firmly bound together. Perhaps withes were sometimes substituted for handles bound in this way.

But it was in the production of more delicate tools, ornaments, pipes and "ceremonial" objects that most ingenuity was displayed. Even the most skillfully directed blow on a choice piece of rough stone, or on a partly finished article might ruin it for its purpose. It therefore became necessary to adopt more cautious, more painstaking devices. Persistent pecking with sharp stones was a common method of reducing the rough block to the desired form, when flaking was impossible, and many excellent examples of this kind only partly executed may be seen in the museum, but even pecking was sometimes dangerous so far as fracture was concerned, and other methods were employed to bring the stone into shape, or to separate one piece from another. One of these methods was sawing. To reduce the size of a piece of stone in process of being wrought, cuts were made within a short distance of each other by the aid of flint-flakes, and, possibly, water, after which the intervening portions of material were readily broken off, and then followed the rubbing-down process with, or on other stones of good abrasive quality.

By the sawing method also, pieces of considerable size were separated from one another, the cut being made of sufficient depth all round the stone to ensure the direction of the fracture when the smaller portion was struck or wrenched off.

Still another plan was to bore a row of holes along the desired line of fracture, next to saw deeply the parts between the holes on both sides, and after separation was effected to remove the elevated portions by rubbing. Several specimens of such work may be seen in the museum.

The boring of stones by savage man has often proved the occasion of much wonder. When the holes are large, say from one-fourth of an inch to an inch or upwards in diameter, one is not at much loss to understand how the operation was performed, but when they scarcely exceed one-eighth of an inch in diameter—sometimes even less—and penetrate stones to the extent of from half an inch to three inches, the method is not clearly seen.

There can hardly be a doubt that the usefulness of water as an aid in perforation, as well as in rubbing, was well understood by the ancient workman. This is one of the things that accident would inevitably suggest, and although it might be difficult to adduce proof to this effect, it may be taken for granted that in most of the work performed by attrition, water was employed as an agent. In

the making of large holes flint drills (to which motion was given by means of a bow) were employed. It is known that the use of the drill-bow was common among the Huron-Iroquois. It is likely also that holes were occasionally made with drills of wood assisted by sand and water, if we may judge from the appearance of some unfinished work, as there is an absence of the striation that characterizes perforations made with flaked tools. If not in Ontario, at least further south, holes were sometimes bored by means of a tubular drill.

Fig. 1. (Full size.)

A specimen in our possession—probably part of a “platform” pipe-stem—has the beginning of a hole made with a tool of this kind, as is evident from the core. Such a drill may have been made by removing the pith from part of an elder, or other similar growth. But, as already remarked, the perforation of small holes, sometimes to the depth of several inches, is more difficult to

understand, and is only one of several processes regarding which we are ignorant.

It is highly probable that most of the tools and other articles of stone, as well as of wood and bone, were made by the men—weapons, more especially, the users would prefer to shape for themselves, or have produced for them by other men possessing peculiar skill in the art, but a large amount of labor devolving on the women, it is to them that we must look in our search for primitive methods. It has been well said that “the militant side of primitive culture belongs to the man; the industrial belongs to woman,”* and the same writer proceeds “The characteristic implement of woman is not a weapon, but that knife called by the Eskimo the ‘ulu,’ or woman’s knife, which is used primitively for all manner of industrial purposes, and which still survives among European women as the kitchen chopping knife. The man undergoes the fatigue of hunting and when he throws the game at a woman’s feet his work is done; it is her part to cook it, as well as to make the vessels in which the food is placed. The skins and refuse are hers to utilize, and all the industries connected with clothing are chiefly in her hands. * * * Women are everywhere the primitive agriculturists, though the rougher and heavier work of making a clearing has usually fallen to the men, and women hold their own in the fields, even in the highly civilized Europe of to-day; thus in Italy among eleven million women, over nine years of age, more than three millions are employed in agriculture. Women have everywhere been the first potters; even in Europe, almost up to the present day, girls in Jutland were brought up to make pots. Becoming the first potters, women prepared the way for decorative art, but never went beyond its first rudiments; ornamentation, apart from use, seems usually to be peculiar to men.

Women are sometimes the primitive doctors; but this is by no means universal, probably because medicine-craft at an early period is not differentiated from priest-craft, which is always chiefly in the hands of men; their more stimulating life of alternate fasts and orgies amid wanderings far afield during the hazards of a chase or of war, makes them more acquainted with the morbid mental phenomena, and with the more ‘supernatural’ aspects of nature.”

Mr. Ellis then quotes from Prof. O. T. Mason, in the *American Antiquarian* for January, 1889. Prof. Mason writes, “Let us follow the savage woman through her daily cares in order that we may comprehend the significance of her part in the play. The slain deer lying before her cave, or brush-shelter, or wigwam, shall be the point of departure in the inquiry. She strikes off a sharp

* Man and Woman, by Havelock Ellis. Introduction, p. 5, 1891.

flake of flint for a knife. By that art she becomes the first cutler, the real founder of Sheffield. With this knife she carefully removes the skin, little dreaming that she is thereby making herself the patron saint of all subsequent butchers. She rolls up the hide, then dresses it with brains, smokes it, curries it, breaks it with implements of stone and bone, with much toil and sweat, until she makes her reputation as the first currier and tanner. With fingers weary and worn, with needle of bone and thread of sinew, and scissors of flint, she cuts and makes the clothing for her lord and her family; no sign is over her door, but within dwells the first tailor and dressmaker. From leather especially prepared, she cuts and makes moccasins for her husband. Out of little scraps of fur and feathers, supplemented with bits of colored shell, or stone, or seeds, she dresses dolls for her children, makes head-dresses and toggery for the coming dance, adorns the walls of her squalid dwelling, creating at a single pass a dozen modern industries—at once, a toy-maker, milliner, modiste, hatter, upholsterer, and wall-decker. * * * She was at first, and is now, the universal cook, preserving food from decomposition and doubling the longevity of man. Of the bones at last she fabricates her needles and charms. * * * From the grasses around her cabin she constructs the floor-mat, the mattress, the screen, the wallet, the sail. She is the mother of all spinners, weavers, upholsterers, sail-makers. Counting and varying stitches, and adding bits of black, blue, red and yellow on her textures, she becomes the first decorative artist; she invents the chevrons, herring-bones, frets and scrolls of all future art. To the fields she goes with this basket or wallet strapped across her forehead. By the sweat of her face she earns her bread, and becomes the first pack animal that ever bent under a burden in the world. * * * Home she comes with her load of acorns, roots, seeds, etc., and proceeds to crush them in a mortar or to roll them on a stone slab. Here she appears clearly as the primitive miller. Or, perchance, she lays her seeds in a flat tray, and by help of the wind, or of a hot stone, removes the chaff. Here begins her first lesson in threshing. * * * Perhaps with a stick hardened and pointed in the fire, she digs the roots from the earth, or cleans or tears away troublesome weeds from useful plants, or digs a hole and drops the seeds of pumpkins, gourds, or maize therein. While we watch her working we are looking at the first gardener, farmer, and nurseryman. It may be that on some lonely plain or alluvial river-bank, there is no cave to shelter her and her babes. How long will it take this afore-time basket-maker and leather-worker to devise a shelter of grass or skin and become the architect primeval? * * * The primeval woman was not a potter. It was not until near the polished stone age that she became the pristine plastic artist. This is true, however, that every form, decoration, and function of pottery were invented by woman. * * * In the struggle for existence and exaltation which takes place among many occupations, as among individuals and species, militancy no longer demands all man's waking movements. The arts devised by woman are in the ascendancy, and the man militant has glorified them by his co-operation. Her very ancient digging-stick is now a plough; her rude carrying-strap over her aching forehead is now the railroad train; her woman's boat, the ocean steamer; her stone hand-mill, the costly roller-mill; her simple scraper for softening hides, the great tanneries and shoe factories; her distaff and weft-stick, the power-loom; her clay and smooth pebble, the potter's wheel; sharpened-stick and bundle of hairs are all the apparatus of the plastic and her pictorial arts. * * * In the early history of art, language, social life, and religion were the industrial, elaborative, conservative half of society. All the peaceful arts of to-day were once woman's peculiar province. Along the lines of industrialism she was the pioneer, inventor, author, originator."

A still more recent writer referring generally to the importance of primitive working methods as a subject for study, says, "Primitive methods of manipulating raw material and of handling tools must ever prove attractive to the student of ethnology. In these we observe the dawn of ideas which, after the lapse of many centuries, have, by degrees almost imperceptible, developed through the minds of superior families of the human race, into these almost miraculously automatic devices that are the crowning mechanical glory of the nineteenth century. The distance is great from the pebble in the hands of the savage, whether used to crack a bone or bring down a bird, to the steam engine of fifty-thousand horse power, and to the gun that can propel hundreds of pounds of metal eight or ten miles, but all the steps may be traced between the simple and the highly complex forms. There is little similarity between the satisfied grunt of an uncivilized man, and the soul-inspiring strains of an oration, but the one is respectively the origin of the other." *

In this connection the attention of archæological students in Ontario is directed to the desirability of preserving not only perfect and highly finished specimens of all kinds, but the very rudest in form as well, and especially those on which the workmanship appears to be incomplete. The former may serve to exemplify the lower types from which the ideally perfect weapon or tool has been evolved, and from the latter much may sometimes be gleaned respecting the devices of the primitive mechanic to reduce his rough material to shape.

ONTARIO EARTHWORKS.

The people who constructed earthworks in this Province never attempted anything of such huge dimensions as are found in many of the States, notably in Ohio, where there are continuous embankments enclosing hundreds of acres. Nor are our embankments comparable to theirs so far as mass is concerned, for, while, as at Fort Ancient, earth-walls rise to heights of from five to fifteen feet, it is seldom that those in this country ever exceed even the former figure. Still, the labors of those who constructed the 'forts' as they are called, in Ontario, are scarcely less interesting—they are certainly not less instructive on this account. Neither did the early inhabitants of our Province exhibit any desire to distinguish themselves, or to commemorate events, by the erection of mounds,† if we except a few in Rainy River District.

Perhaps in the popular name 'fort,' lies the reason for the existence of all the earthworks we find in Ontario. On this assumption one would reasonably enough look for earth-walls enclosing areas large or small, only on commanding situations, but no such invariable choice actuated the aborigines of Ontario either in the extreme east or the extreme west. North of Morrisburg where the line of an old embankment was traceable only a few years ago, it occupied an almost dead level—in Middlesex and Elgin counties, with one or two exceptions, it is the same, and so it is in the county of Waterloo. There is hardly a doubt that scores of 'forts' lying between the farthest points named have long since been ploughed out of sight, but it is not improbable that a few exist of which we possess no knowledge. Situated anywhere, but especially on a plain, low banks of earth, not exceeding perhaps more than six or seven feet in height, could scarcely in themselves have afforded adequate protection by way of defence, and it is almost

* The Catholic Church in the Niagara Peninsula, p. 84, by Dean Harris, Toronto, 1895.

† It would almost appear unnecessary to point out that a mound is a *heap*—an elevation, and yet, by some confusion of ideas, ossuaries, which now-a-days, at all events, manifest themselves as depressions, are referred to in some parts of the country as mounds. In a few places in Simcoe county, even intelligent persons speak of ossuaries as *caves*.

certain that they were constructed as the footholds or foundations of stakes or palisades, as described by Chaplain, Cartier and others.*

In one or two places, traces of the old posts or stakes have been found at intervals along the banks,—as at Beverly, in Wentworth county—but usually there is nothing to show that any palisade existed.

In the neighborhood of where embankments are found, it is a popular belief that at first they were much higher, and that the height is decreasing with the advance of time. There cannot be a doubt that when the earth was originally piled up it stood perhaps two or three feet higher than it does now, but it is not likely that the banks as we find them to-day are any lower than when the enclosures were evacuated by those who formed them. So long as the forest stood the soil was protected from denudation to any serious extent, and the principal diminution in height would be consequent on the subsidence of the material loosely thrown up, or only slightly packed, and after the trees were felled, the grasses and other plants formed a mat capable of protecting the banks from appreciable decrease in height during centuries. A reason for the belief that the banks are gradually becoming lower, may be found in the fact that the observers in many cases were very young when they first set eyes on them, and most of us know, some of us bitterly, how utterly untrustworthy our youthful impressions of magnitude are. But the embankments as they are, bear evidence that they could never have been much higher, for their width of base is scarcely greater than was necessary to hold in position the heaped-up soil, especially if we suppose, as we have good reason to do, that they afforded foothold to two or three rows of palisades crossing each other at the top.

In the construction of these enclosures advantage was taken of any natural declivity that might add to the outward height of the works, if to the extent of no more than two or three feet. Indeed, it would seem that the existence of even so small a hollow was sufficient to govern the choice of location in a section of the country generally level. The proximity of water was in any case a necessity, and if this could be had in the shape of a small stream so much the better, for the supply of fish was not to be overlooked. The selection of ground was also influenced largely by the presence of small fruit and nut-bearing trees, and in this connection it is noteworthy that the nearness of a swamp may be predicated when the site of a fortified encampment is known, as cranberries have always been an important article of food to the Indian.

The first earthwork visited this year is in a field near the Berlin and Waterloo general hospital—a little west of the former town, and south of the latter. I was accompanied by Mr. Jacob Stroh, a most ardent archæological student, who has devoted much of his time during many years to the making of local researches and the forming of a considerable collection of material illustrative of early life in his neighborhood. Although cultivation has to a large extent levelled the banks surrounding this village site, enough remains to show that they formed a large

*Most of the villages seen by Arent Van Curler, or Corlear, among the congenors of our Indians in what is now the State of New York, in the year 1634, were situated on elevated ground. In his entry of Dec. 16th, he says, "This castle . . . is built on a hill, without any palisades or defence," but elsewhere, he mentions that the villages were fortified or protected in this way. On the 22nd of the same month he visited Tenotoge, which he describes as consisting "of fifty-five houses, some one hundred, and other ones more or less paces long," and, he adds, "This castle has been surrounded by three rows of palisades." On the 30th of Dec., he came to a village of sixty-six houses, and "This castle is situated on a very high hill, and was surrounded with two rows of palisades."—*New York Independent*.

He observes that among the village or castle palisades, "six or seven pieces were so thick, that it was quite a wonder that savages could do that," whereas, the "graves were surrounded with palisades that had been split from trees, and they were closed up so nicely that it was a wonder to see." *Ib.*

semi-circle enclosing about four acres, the ends running to a small trout stream flowing through a swamp close by. A portion of the bank still traceable is one hundred feet long, on each side of which there has been a ditch. In an adjoining field not so much ploughing has been done, and there the bank may be followed for a distance of a hundred and thirty-six feet, the height varying from four to six feet—the latter being along the side of a small gully. Here, also there are two banks roughly parallel, the distance between which, from crown to crown, is from seventeen to nineteen feet.

This land is covered with a dense growth of pine, many of the trees, Mr Stroh affirms, being from a hundred and fifty to two hundred feet high. In the neighborhood, wild fruit was abundant, including plums, cherries and huckleberries, and butter-nuts, beech-nuts and hazel nuts grew in profusion.

It is probable that in the near future the land here will be sold out for building lots and every vestige of the ancient earthworks will be removed, although it is not too much to hope that the people of two such enterprising and prosperous towns as are Berlin and Waterloo might see their way to unite in securing these fields for park purposes, and thus aid in preserving a pre-historic landmark which, as time advances, will be regarded with increasing interest. When it is too late, the unavailing query will be in the mouths of many, why was this not done?

The German people cannot be charged with indifference to matters of this kind; as a people devoted to the interests of education and of science generally they may look near or afar without fear of finding their superiors, and perhaps we shall yet learn that some public-spirited Teutons in both towns have taken this project in hand, determined to "put it through."

On the farm of Mr. R. Shaw Wood, lot 20, concessian 4, in the township of London there is the site of what may be called an ideal fortified town or village. The situation is not only commanding; it is romantically beautiful, occupying as it does part of a plateau more than one hundred feet above the streams that here unite at its base, and overlooking one of the most beautiful combinations of heavily timbered meadow and upland that can be seen anywhere in this country. Along the foot of the steep bank forming the northern side of this plateau flows the Medway, a tributary of the river Thames, and on the southerly side, nearly as precipitous as the other, a smaller stream which joins the former at the lowest point of the long slope, up which the summit may be reached from the east. The spot has long been known to relic-hunters, and large quantities of what should have been valuable material, have been dug from it. Unfortunately, in most cases, it is to be feared, the only object was to secure specimens without reference to any other consideration, and despite the objections of the proprietor, almost every foot of available surface has been turned over, until the original appearance of the place may only be guessed at, and as the work had to be carried on furtively, during Sundays and in the dead of night, one may readily understand how little attention could be paid to the making of accurate observations, even had the desire to do so been present in the minds of the diggers.

On the occasion of my first visit to this "fort," I was accompanied by Mr. Wolverton, L.D.S., an enthusiast in all that pertains to pre-historic life in Ontario. His private collection is large, and comprises much rare and correspondingly valuable material, which it is hoped will some day be placed on public exhibition with other private collections for the benefit of western students

LOT 20, CONCESSION 4.

LONDON TOWNSHIP, MIDDLESEX,

ONTARIO

(1 1/2 in. = 1 foot.) Ash heaps.

Large depressions.

Ash heaps.

Ash heaps.

Numerous shallow pits.

Mr. Shaw Wood, the proprietor, very kindly conducted us to the earthworks, where rough measurements were made of the embankments near the eastern end, at which part this could be done with least trouble.

This portion measures two hundred and fifty feet, embracing all the eastern side, and part of the two flanks overlooking the streams, but the latter extend much farther westwards, although their lines can be followed only with some difficulty. Near where they may be supposed to terminate, there are traces of another bank connecting these two extremities, and thus enclosing a space of three or four acres.

Mr. Wood having courteously granted me permission to make a somewhat thorough examination of all the ground, a second visit was made for this purpose, only to find that a few nights previously the most promising-looking spots had been attacked by a party of relic-hunters, and the ground was left in such a condition that anything one might find would possess little value beyond that of being a curiosity, or, in the language of the relic-hunter, a "curio." Advantage, however, was taken of the opportunity to verify former measurements, and to examine the ground more closely. Openings were also made at various places on the banks to discover, if possible, traces of stake holes, but after repeated openings were made none was found, and a deep cut dug to the base of the bank showed nothing but clean, gravelly soil.

Along the north side are numerous hollows from three to four feet in width, and averaging about a foot in depth. These seem to be arranged in series of three each, twelve to thirteen feet apart, and extend into an adjoining field on the farm belonging to Mr. McCoomb. We dug into several of these hollows, but found nothing to indicate their purpose. Depressions of a similar kind were observed on a hill at Parry Sound when that place was visited a few years ago, and others have been noticed elsewhere. As a result of the examinations made, these hollows on Mr. Shaw Wood's farm appear to have been originally about three feet deep. Perhaps they were used for storing grain.

Mr. Wood states that some years ago, before the surface was disturbed, he counted fourteen ash-beds, or camp-sites, on the area enclosed by this embankment.

The accompanying sketch of part of the earthworks on Mr. Wood's property shows what they look like along the part where they are seen to the best advantage.

It may be observed that fragments of pottery may be picked up everywhere within the embankments.

This place is worthy of more minute examination, and a survey of it should be made in such a way as to embody every detail within the area.

It is a matter of pleasure to know that Mr. Wood's tastes are all in the direction of preserving this peculiarly interesting "fort" as nearly as possible in its original condition, and it is to be trusted that other persons will assist him in this most laudable endeavor.

Thanks are due to him for his many acts of courtesy, not the least of which was the presentation of a human skull found within the embanked enclosure. The skull in question presents the peculiar feature of a wormian bone at the frontal-parietal fontanelles, besides twenty-five similar formations along the occipital sutures.

On information supplied by Dr. Wolverton, of London, I visited a most interesting earthwork on lots 10 and 11 in the township of North Dorchester, county of Middlesex. On the former lot, years of cultivation have almost removed every

Small. ($\frac{1}{16}$ in = 3 ft.)
Tavine.

semblance of a bank, but on lot 11 the original owner took especial pains to preserve that portion of the embankment which lies on his property, and his son, Mr. Oswald Jackson, now in possession, is equally solicitous that nothing shall be done to destroy it.

Viewing the works from the western end, on lot 11, there is apparently nothing in the situation to justify its claim as a fortified encampment. The land is level, and there is no water within sight. On lot 10, however, the property of Mr. Sharpe, there are two large sink-holes, which no doubt, in former days, held a perennial supply of water, and it would seem evident that the presence of these must have mainly influenced the selection of the spot as a village site.

The untouched and only remaining portion of the earthwork projects itself into Mr. Jackson's field almost as an arc of a circle. Its greatest distance from the fence line being ninety-three feet, and the distance between the northern and southern extremities of this arc, in a straight line, is three hundred and eighteen feet. Measured from the middle of the ditch that runs along the outside, the bank varies in height from two to four feet, and its width across the base is from twelve to eighteen feet. A few stumps of considerable size remain on the bank. One of maple near the south end is two feet six inches in diameter, and another of beech is two feet ten inches. Portions of the sod were stripped from the surface in several places in search of the remains of old posts, or traces of post holes, but none appeared.

So far as the portion of the earthworks under cultivation was concerned, reference was made to Mr. B. F. Sharpe, who remembers distinctly the old line of the embankment. Under his guidance the ground was gone over, showing that the area was in shape like a palette, the northern and southern banks terminating at the east end of a little ravine or hollow. On account of the field being in crop, it was not possible to take any measurements, but this was done subsequently by Messrs. Sharpe and Jackson, and the results forwarded to me. According to these the greatest length of the works is five hundred and seventy feet from east to west, four hundred feet to the head of the ravine, and about the same distance from north to south. Mr. Sharpe, senior, states that the banks did not meet on the east side, and that according to his recollection the ends were at least twenty rods apart. This would mean that no earth was thrown up round the curve formed by the natural hollow facing the east.

The sink-holes referred to form the chief feature within the line of banks. The larger one towards the north-east is at present eighty-four feet in diameter, and in the middle is seven feet deep, the other one is only seventy feet in diameter and five feet deep. These holes are said to have been fully twelve feet in depth when the land was "in bush," but for many years attempts have been made with the plough, to fill them up.

A pond known as Whittaker's Lake is not far distant, and from this source, as well as from Kettle Creek, its outlet, pike, bass and perch were easily procurable. Only five miles away the river Thames flows. Beaver dams are said to have been numerous on the smaller streams running into Kettle Creek. Wild turkeys were no doubt plentiful, and the woods yielded stores of plums, butternuts, walnuts and hickory nuts. Five miles off there is a marsh that still yields large quantities of huckleberries.

In the woods that stand adjoining this earthwork, on Mr. Jackson's farm there are many ash-beds, and in a few places graves seem to have been made.

It affords great pleasure to know that all that remains of this somewhat extensive earthwork is likely to be kept intact by Mr. Jackson, the intelligent.

proprietor of the farm. To himself and the various members of the family thanks are hereby presented for the many courtesies extended by them. The season was a busy one when the place was examined, but Mr. Jackson devoted much time to going over the ground for a considerable distance round the "fort," and made many openings in the soil, both to show where he knew ash-beds existed and to discover others.

It is in this section of the Province that the largest number of such earthworks are known to exist. It is highly probable that there are, or have been, others in adjoining townships. We know of several in the township of Malahide, county of Elgin, and not far away is the famous double embanked works of Southwold, which it is hoped will soon be acquired by the municipal authorities to be held as public property. Farther west still we may expect to hear of similar structures, to search for and examine which should be part of next year's work.

In connection with the Southwold works it should be mentioned that since they were described in one of our reports, the ground has been surveyed by Mr. A. H. Campbell, C.E., who very kindly presented the museum with an accurate plan from which a plaster model has been constructed. The untimely death of Mr. Chester Henderson, who owned the farm on which the earthworks are situated, may cause delay in steps being taken to secure the few acres required, but the activity and zeal of the Elgin Historical Society may be depended upon to do everything possible by way of attaining this object.

SHALLOW PITS.

Reference has been made in former reports to the occurrence of rows of shallow pits, similar to those on Mr. Wood's farm in London township. One of the most remarkable instances of these is in the township of Bexley, a few miles from Victoria Road station. These were examined last summer by Mr. Geo. E. Laidlaw and myself, but we could arrive at no satisfactory conclusion as to the manner of their use. That they are of artificial formation is undoubted—their situation, proximity and arrangement make this perfectly clear. Like those on Mr. Wood's farm, they are close to a village site, they are within a few feet of each other, and appear to form a group of rows. We opened several of them to a depth of ten feet, or until the undisturbed soil was reached, but in no case was there anything to indicate a purpose in making such pits. The absence of charcoal and ashes gave no color to the supposition that they had been fireplaces, and the probability is that they were used as *caches* for corn.

To refer to them as rifle pits is too absurd, and it is scarcely less so to regard them as having been employed for purposes of ambush at a time when the whole of the country was forest-clad, and such an artificial method of forming hiding-places was wholly unnecessary.

Had they been connected with posts forming an enclosure, they would not now appear as depressions, and they certainly were not graves, if one may judge from the total absence of anything to indicate such a purpose.

In the present exceedingly rough condition of the ground, covered as it is with fallen timber and considerable undergrowth, it is impossible even to count the number of pits, far less to arrive at any conclusion regarding their arrangement, as it relates to the whole of the area they occupy. So far as we could form

any estimate at all, there are not fewer than fifty of these hollows. Within a hundred yards of them flows an important branch of the Talbot river.

MUD LAKE EMBANKMENT.

On the farm of Mr. John McEwen, lot 15, concession 11, Drummond township, Lanark county, a peculiarly artificial looking bank, several hundred yards in length, extends along the edge of Mud Lake, turning inland towards the southern end. While the appearance of this bank as a whole gives the impression that it is of human origin; when examined in detail, superficially, it seems to be of natural formation. On the one hand there does not appear to have been any possible advantage in the artificial construction of an embankment at this place, while on the other, the configuration of the adjacent land makes it difficult to supply a geological reason for the existence of so long and sharply defined a reef. Some openings should be made to ascertain how it is put together.

OSSUARIES.

The presence of a bone-pit, or communal grave, has hitherto been regarded as sufficient proof that the district was within the territory occupied by the Hurons, but the fact that examples of ossuary sepulture are found so far away as Manvers, the nearest point of which is twenty-four miles south-east of Lake Simcoe gives rise to one or two queries. Was this within the limit of the Huron country? Or, was it only occupied by some offshoot of these people? Or was this method of burial adopted by a neighboring people? Or had this been a place of sojourn by the Hurons on their way towards the other side of Lake Simcoe?

However this may have been, it is undoubted that the presence of ossuaries in this part of the country is exceptional, although it is now known that there are at least two—one on the farm of Mr. Syer, and the other on lot 18, concession 8, belonging to Mr. Robert Fallis.

Having learned from Mr. R. W. Perry of the one on Mr. Syer's farm, and having received permission from the owner to open the pit, I was fortunate in securing the services of Messrs. A. and A. B. Clifford for that purpose. Unlike most ossuaries in the Huron country proper, this one is on comparatively low ground.

Before being opened it presented a rather unusually deep depression of nearly three feet, and eighteen feet in diameter, almost circular. Portions of it have been tampered with at intervals during many years, but no thorough examination of it was ever made. As the conditions seemed favorable, notwithstanding former openings, it was resolved to clean it out thoroughly. Two feet below the surface bones were reached in the undisturbed part of the pit, the bottom of which was struck at a depth of six feet in the centre. Approaching the sides, the bottom rose gradually until it was not more than five feet deep. It was a matter of impossibility to make any exact reckoning of the number of skeletons contained here, but it could not have been far short of six hundred, taking the skulls as a basis, although in most instances these had fallen to pieces. They were placed in groups of from four, to six or seven, both above and below the other bones without any reference to order, so far as could be seen. The limb bones appeared to have been in bundles, from the way they lay across each other, and I was able to secure three such bundles just as they were originally deposited, but of course whatever had been used to tie them together was wholly decayed. Ribs, vertebræ and small bones generally, appeared in confused masses, but this may have been

brought about by disturbance consequent on the subsidence of the soil. This ossuary was wholly barren of anything in the shape of relics. Not a flake of a flint, nor a fragment of pottery was seen during the two days engaged in the work of opening. We were, however, amply rewarded by procuring fifty-seven very good crania, many of them showing wormian bones.

The soil in which this pit was dug is a rich sandy loam. A village site may be traced in a field only a few hundred yards from the grave.

The ossuary, some five or six miles further east, on Mr. Fallis's farm, occupied a position more in keeping with the practice of the Hurons in selecting such burial places, as it is on one of the highest points in a hilly part of the township. Rain prevented us from going very far with the work of opening, but in any event the appearances indicated frequent disturbance, and we were informed that there was not the least likelihood of getting even a whole skull.

The most important feature connected with this ossuary is the fact of its position so far east, and to be able to record this alone, is of some value.*

A small ossuary was accidentally discovered by Mr. A. Bowman on his farm, lot 72 concession 2, township of Flos, Simcoe county. Dr. McClinton of Elmhurst, who kindly accompanied me to this place, and otherwise extended many courtesies, on seeing all the bones that had been carefully removed by Mr. Bowman, came to the conclusion that this burial place had contained the remains of about twenty-five persons. Most of the skulls and many of the other bones were in a fragmentary condition, but five very good specimens of the former, and three somewhat imperfect, besides numerous specimens of the latter, chiefly of the limbs have been added to our collection from this place. That the burial was of post-European date was evidenced from the fact that along with the remains were found six iron tomahawks of French make, a small copper pot, or kettle, very much decayed, and four brass finger-rings, bearing on the seal the letters I. H. S. identical in pattern with one presented to us from another grave in Simcoe, by the Rev. Mr. Laboreau, of Penetanguishene, in 1887.

Besides these there were seventeen small discoidal, wampum beads and twenty-eight of the much rarer variety, formerly known in some of the Atlantic states as "runtie"; they are roughly quadrangular in form, from five-eighths of an inch to an inch and a quarter long, (*i. e.*, measured in line with the hole, which is bored edgewise) and the width of most of them is about a third less than their length, but some are almost square, and one is wider across the hole than in the opposite direction. The thickness too, varies very much—from three-sixteenths to three-eighths of an inch, and as no attempt has been made to reduce the original irregularities of the shell single specimens are not of uniform thickness. The foregoing particulars are mentioned for the purpose of showing that in all probability these were made by the natives, for it is well known that at Hakensack, New Jersey; Albany, New York; and perhaps elsewhere, wampum was manufactured in immense quantities by the Dutch.

All the material from this ossuary, except the brass finger-rings are now in our cases.

REPORTED STONE CHANNELS.

It is commonly reported that at certain places along the banks of the River Mississippi where it flows through Drummond township, there are graves a short

* Mr. A. F. Hunter writes to me that he has heard of one in Harvey township, Peterboro', north-east of Manvers.

distance from the water's edge, with which they are connected by narrow tunnels or passages made of stone. On one occasion Dr. Beeman and myself spent a day in searching ineffectually for even one such grave. A farmer who was thought to know all about these peculiarly constructed graves took us some distance in a canoe to point out where a few of them might be seen, but the places bore no resemblance to graves, and the tunnels were not visible.

Last summer at Innisville, in this township, we met Mr. George Code, one of the oldest settlers, who assured us that about thirty-five years ago when excavations were being made for the foundation of a house, a drain-like structure of cobble-stones was found to run towards the Mississippi for a distance of more than fifty feet. The channel, he stated, was about a foot square, and the work of construction was roughly performed, the drain being neither straight, nor uniform as to grade. At one point, he said, it passed under a pine four feet in diameter, and where it reached the river the mouth of it was covered with a large flat stone. He also informed us that a similar passage was found a short distance farther down the river. No traces of these now exist.

SUPPOSED STONE WALL.

On the farm of Mr. William Armitage, lot 14, concession 4, township of Biddulph, Middlesex county, there is what looks like the foundation of a rough stone wall. Mr. Wm. Matheson and myself examined this very superficially. Mr. Armitage says it was there when the land was settled, but he has no knowledge of its origin. A deep hole, that may have been a well exists near by, although now partly filled up. If this should prove to be a wall artificially put together, it will probably point to some permanent station of the French missionaries previous to 1650. It would be worth while to settle this, by making a few openings or by laying the whole structure bare if necessary. In view of the work on which General Clark of Auburn, New York, has for so many years been engaged, namely, the preparation of a map of Ontario marking the sites of Indian towns or villages mentioned in the early French records, it would be satisfactory to be able to say whether any outpost had ever been established at this point.

To the Canadian historian, General Clark's work along this and some other lines must prove invaluable. Hitherto, the exact situation of nearly every place mentioned in early documents has been mainly or altogether a matter of conjecture, and opinions of writers have differed so seriously as in some instances to be flatly contradictory of each other. It is easy, therefore, to see that where so much confusion is possible among authorities, the casual student must find it extremely difficult to read to the best advantage. The missionaries were not concerned to take observations of latitude and longitude—they simply state that they travelled so many days or hours, in this or that direction, and reached a town known as so-and-so. With such meagre data it would seem out of the question to arrive at indisputably definite determinations, and such evidently has been the feeling of all who have hitherto approached the subject—even Dr. Parkman's delightfully written narratives afford scarcely any assistance by way of enabling us to place our finger on, or even very close to, particular spots, with the remark, "Here was such and such a town."

It has remained for General Clark to grapple with this subject by severely critical methods, and after many years of devotion to the close comparison of all existing records, and copies or originals of numerous early maps, to reach conclusions which he hopes will go far towards placing our knowledge on a sound basis.

ROCK PAINTINGS, OR PETROGRAPHS.

In the evolution of alphabetic forms, or forms representing elementary sounds, it is perhaps safe to concede that picture-drawing succeeded sign-language. A tremulous, horizontal motion of the hand to indicate water, would suggest a zig-zag line as an equivalent pictograph—objects of all kinds, natural and artificial were employed, first *literally*, if we may use the expression here, and afterwards, to some extent, figuratively. Conventionalization soon followed, and what at best were only poor imitations became much abbreviated; the human form lost nearly all its original semblance, to appear only as a forked T-like figure, and beasts and birds were reduced to mere foot prints. In Mexico, the rebus and phonetic stage was reached by the Indians, and it was possible by means of the characters employed to write a connected, grammatical narrative. But neither the Algonkian nor Huron-Iroquoian people who occupied this latitude, attained to so much excellence in recording thought—they did not advance beyond the pictograph stage; at least they had not so advanced when the white man's advent precluded further development, by bringing about a condition of things that obviated any necessity for it, or by introducing disturbing elements tending rather to confirm the natives in traditional customs and practices, than to stimulate or encourage them to possible progress in this direction. It is needless to discuss the likelihood of our aborigines reaching an alphabetic form had they been left to themselves, all that now concerns us is the fact that they did take one or two steps in that direction, and the examples they have left us of their pictographic art are, confessedly, among the best illustrations the world affords of those primitive conceptions, which, everywhere and always much alike, have, in favorable circumstances, led to the achievement of what we call Literature.

So important is the subject of Indian picture-writing regarded by the United States Bureau of Ethnology, that Director, Major J. W. Powell has devoted to it the whole of the eight hundred page volume issued in 1893. The author, Col. Garrick Mallery may here be quoted as to the importance of the study:—

“The importance of the study of picture-writing depends partly upon the result of its examination as a place in the evolution of human culture. As the invention of alphabetic writing is admitted to be the great step marking the change from barbarism to civilization, the history of its earlier development must be valuable. It is inferred from internal evidence, though not specifically reported in history, that picture-writing preceded and generated the graphic systems of Egypt, Assyria and China, but in America, especially in North America, its use is still current. It can be studied here without any requirement of inference or hypothesis, in actual existence as applied to records and communications. Furthermore, the commencement of its evolution into signs of sound is apparent in the Aztec and Maya characters, in which transition stage it was arrested by foreign conquest. The earliest lessons of the genesis and growth of culture in this important branch of investigation may, therefore, be best learned from the western hemisphere. In this connection it should be noticed that picture-writing is found in sustained vigor on the same continent where sign-language has prevailed and has continued in active operation to an extent historically unknown in any other parts of the world. These modes of expression, *i.e.*, transient and permanent thought-writing, are so correlated in their origin and development that neither can be studied to the best advantage without including the other. Unacquainted with these facts, but influenced by an assumption that America must have been populated from the eastern hemisphere, some enterprising persons have found or manufactured American inscriptions composed of characters which may

be tortured into identity with some of the Eurasian alphabets or syllabaries, but which sometimes suggest letters of indigenous invention. * * *

When a system of ideographic gesture-signs prevailed and at the same time any form of artistic representation, however made, existed, it would be expected that the delineations of the former would appear in the latter. It is but one and an easy step to fasten upon bark, skins, or rocks the evanescent air-pictures that still in pigments or carvings preserve their ideography or conventionalism in their original outlines. * * * * *

The execution of the drawings, of which the several forms of picture-writing are composed, often exhibits the first crude efforts of graphic art, and their study in that relation is of value.

When pictures are employed for the same purpose as writing, the conception intended to be presented is generally analyzed and only its most essential points are indicated, with the result that the characters where frequently repeated become conventional, and in their later form cease to be recognizable as objective portraiture. This exhibition of conventionalizing has its own historic import.

It is not probable that much valuable information will ever be obtained from ancient rock carvings or paintings, but they are important as indications of the grades of culture reached by their authors, and of the subjects which interested those authors. * * * * *

Some portions of these pictures can be interpreted. With regard to others which are not yet interpreted and perhaps never can be, it is nevertheless useful to gather for synoptic study and comparison a large number of their forms from many parts of the world. * * * * * Indications of priscan habitat and migrations may sometimes be gained from the general style or type of the drawings and sculptures, which may be divided into groups, although the influence of the environing material must always be considered.”*

A little further on in the volume already quoted (pp. 34-35), Col. Mallery says:—“It must be admitted that no hermeneutic key has been discovered, applicable to American pictographs, whether ancient on stone, or modern on bark, skins, linen, or paper. Nor has any such key been found which unlocks the petroglyphs of any other people. Symbolism was of individual origin, and was soon variously obscured by conventionalizing; therefore it requires separate study in every region. No interpreting laws of general application to petroglyphs so far appear, although types and tendencies can be classified. It was hoped that in some lands petroglyphs might tell of the characters and histories of extinct or emigrated peoples, but it now seems that knowledge of the people who were the makers of the petroglyphs is necessary to any clear understanding of their work. The fanciful hypotheses which have been formed without corroboration, wholly from such works as remain, are now generally discarded. * * *

Rock-carving, or picture-writing on rocks, is so old among American tribes as to have acquired a nomenclature. The following general remarks of Schoolcraft are of some value, though they apply only with accuracy to the Ojibway, and are tinged with a fondness for the mysterious:—

‘For their pictographic devices the North American Indians have two terms, namely, *Kekeewin*, or such things as are generally understood by the tribe, and *Kekeenowin*, or teachings of the *medas*, or priests, and *jossakeeds*, or prophets. The knowledge of the latter is chiefly confined to persons who are versed in their

* * * * * Picture-writing of the American Indians by Col. Garrick Mallery, pp. 26-28. Tenth Annual Report of the Bureau of Ethnology for 1888-89. Washington, 1893.

system of magic medicine, or their religion, and may be deemed hieratic. The former consists of the common figurative signs, such as are employed at places of sepulture, or by hunting or travelling parties. It is also employed in the *muzzinabiks*, or rock writings. Many of the figures are common to both, and are seen in the drawings generally; but it is to be understood that this results from the figure alphabet being precisely the same in both, while the devices of the nugamoons or medicine, wabino hunting and war songs are known solely to the initiates who have learned them, and who always pay high to the native professors for this knowledge."

As between the peoples who have occupied this portion of the continent—Huron-Iroquois and Algonkins—the pictographic art would appear to have been in most favor with the latter. In almost every area known to have been occupied by Indians of this stock, numerous examples of petroglyphs and petrographs are on record, while in the territory held by the former little or nothing of this kind exists that may be declared authoritatively Iroquoian. Among Algonkins, the Ojibwas exhibited a fondness for recording important events on stone, bark and skin, and consequently they attained to a higher excellence in pictography than was reached by some others of the same great division.

Hovering for centuries, probably, so far as Ontario was concerned, near the northern limit of what, for the time being, the Iroquois may have been pleased to regard as their own territory, and being, we may assume, most of the time either on the offensive or defensive with respect to their more southern neighbors, it will readily be understood that the Ojibwas in this part of the country found many events worthy of being recorded by the finger and paint-pot of the tribal artist-historian on the rocky cliffs that present themselves so frequently throughout the region they held. In the course of time, some, perhaps most of such records, have disappeared; indeed the wonder is that any exist at all, for the pigment was probably tempered with water only, but even though oil had been used for this purpose, the lapse of no more than a century of exposure to the elements is a severe test of color permanency. In every part of the world red was the color most commonly employed in rock paintings, and the Indian of Ontario used for his work, hematite, one of the most durable pigments known.

ROCK PAINTINGS AT LAKE MASSANOG.

Although there can be little doubt that few places within a hundred miles or more on the north side of the St. Lawrence and Lake Ontario were unvisited by the Iroquois in the course of their hunting expeditions and their vengeful raids, it does not seem probable that they held permanent sway for more than half of that distance beyond the shore, from the county of Hastings eastwards to the Ottawa. Even such simple agricultural operations as they carried on were likely to meet with more success to the south of this limit than northwards, but perhaps the chief reason they had for establishing their "towns" and "castles" (as the old writers called these habitations) in territory adjacent to the large lake and river, was the facility thus afforded to their movements by the water. It is, at all events, clear that the eastern interior of Ontario has been occupied by a people not Iroquois, or Huron-Iroquois, if any reliance is to be placed on the dissimilarity that exists between the relics found in this part of the province, and those that are known to be of Iroquoian origin. Speaking broadly, there is a tinge of Innuït influence perceptible in some of the material found, that is not observable farther south or west. The line of the Canadian Pacific Railway from Ottawa to Peterborough, and of the Midland Railway from Peterborough to Penetanguishene,

may be assumed to mark roughly the northern limit of Huron-Iroquois influence. For most of the distance traversed by the former railway through the counties of Addington and Frontenac the surface of the country is hilly and rocky, forming to some extent a natural barrier between the fertile south, and numerous comparatively fertile stretches to the north. Beyond this it is not likely the Iroquois found many inducements to proceed, nor is it probable that the Algonkins frequently penetrated far beyond it to the south. Across the townships of Kaladar and Kennebec this feature of the topography is strongly marked, and the rocky heights here attain to the dignity of being styled the "Bald Mountains." About twelve miles due-north of Kaladar station, and about fifteen or sixteen by a road which is anything but straight, the southern end of a long and narrow lake, known as Massanog,* may be reached. Lake Massanog stretches in a northerly direction throughout the greater portion of the township of Barrie into the township of Abinger, a distance of some twelve or fourteen miles. The lower end, called the Little Massanog, about four miles long, is almost cut off from the main body by a tongue of land extending from the western shore until it comes within about nine yards of the rocks that form the eastern side. Beyond these "narrows" the lake stretches north by west, until, as already mentioned, it passes into Abinger.

For fully two miles south of the narrows, and to quite as great a distance beyond them, towards the north, the eastern side of Lake Massanog is a precipitous wall of primary rock, rising from a hundred to a hundred and eighty or two hundred feet above the lake level. The whole mass appears to have been thrown up by a force acting from the north until the dip of the strata is now almost exactly forty-five degrees.

Our information was to the effect that certain artificial markings or paintings existed on the face of these rocks, north of the narrows, and the canoes of our party were accordingly headed thither. Warned by many disappointing experiences, my belief in the existence of real rock paintings was very weak. I was prepared to see streaks and stains, the result of oxidization, but no work of human agency, although I had heard of such at this place many times during the last twenty years.† It did not, however, take long to convince even the most cautious, or the most skeptical that the markings here were the work of man, and of savage man. On nearly every available bit of smooth surface were traces of a red pigment. In a large number of instances these had become too indistinct to follow, but others were tolerably plain, either in part or as a whole. The work was done in a dull red color, probably hematite, the faded appearance of which did not contrast very strongly with the dingy brown of the rock itself, but in a few sheltered places the outlines came out more sharply, both because the color was brighter, and the rock was less weather-stained.

Dr. Beeman was provided with a camera, but, notwithstanding that the day was bright, and the water mirror-like, it was found impossible to secure satisfactory pictures of the markings, owing chiefly to the lack of sufficient contrast between the natural and artificial colors, even when these were distinct enough to the eye.

Anticipating possible non-success in this line we took the precaution to make sketches in pencil, measuring the various parts of the designs as well as we could from the boat, for it was impossible to land anywhere, the rocks rising

*Also Massanaw, Mazanog, Missinog, Mishenog, Missinoque, Michenog, and Mitchenoug.

†It was chiefly on account of a recent visit made to this place by Messrs. W. C. Caldwell, of Lanark, and R. J. Drummond, of Perth, that our expedition was undertaken. These gentlemen on their return expressed themselves to the effect that there could be no doubt relative to the artificial character of the drawings or markings made on the Massanog rocks.

sheer from the water's edge.* This, however, presented the advantage of allowing us to make a close and critical examination of the paintings, which, as may be seen from the accompanying illustrations, are chiefly, perhaps altogether, mnemonic signs, coming under the head of "notices," according to Col. Mallery's classification. The drawings or paintings, as they are called, begin about a mile from the Narrows, as we sail northwards, and appear at intervals for fully another mile; the places selected for the work being those that presented the smoothest surface, irrespective of the direction in which they faced. The drawings were grouped in these places as shown by the numbers in the illustration, but each group was so far from any other that there was no probability of a connection, so far as import is concerned. In no place was there any appearance of painting at heights beyond reach from a canoe or from the ice, as they were seldom more than seven feet above the water, and reached as low as within two feet of it.

The markings or drawing were in bands, or broad stripes from one to two inches in width. Sometimes it was with difficulty that even the direction of a line could be followed with any degree of certainty, but nothing was placed on paper until the rock had been scrutinized by five or six pair of eyes, viewing the figures at different angles and at various distances. Some of the more weathered outlines showed most distinctly at the distance of a yard or two away, e. g., figs. 27, 28, 34 and 38, plate II., but the brighter ones presented no difficulty at any reasonable distance.

However, notwithstanding all the care that was exercised, those who know how easy it is for error to creep in when one is copying indistinct and unknown characters, will readily understand that other persons might, in doubtful cases, give figures varying in some degree from those here presented. This applies more particularly to figures 34 and 38, which are so grotesque looking, and to figures 28, 33 and 36, plate II., resembling lines laid down by a land surveyor when laying out town lots. One's imagination, or even his desire to see some special shape, may lead him, more or less unconsciously, to give a line a twist or a turn that another might reverse, or perhaps not observe at all. Then, too, the position of the observer, the time of day, and the condition of the atmosphere all affect, to some extent, the appearance of much weathered and correspondingly indistinct tracings on a sombre colored rock surface. So much is this case that even the same observer on two or more occasions might produce so-called copies wholly dissimilar from each other, and all unlike the work of another copyist. In the instances referred to, and, possibly, to a slight extent, in a few others not sharply defined, this should be taken into account. On several portions of the rocks there are evidences that other drawings or paintings once existed, but these are now so nearly obliterated that no outline can be followed. In many cases the lines, although not sharply marked, are yet sufficiently so to enable anyone to distinguish the design. This is especially true of nearly all the figures on plate I., and where most difficulty existed regarding forms shown in plate II., the blurred or washed out portions are indicated by dots.

The series of parallel, perpendicular and oblique lines, from two inches to a foot in length were probably intended for numeration purposes. On plate I. examples of these are shown as they stand dissociated from any other markings (figures 1 to 7 and 9), while on plate II. records of this kind are found along with some that cannot be so classified.†

* At this part of Lake Massanog the water is said to be three hundred feet in depth within a yard of the rocks.

† It should be mentioned that the arrangement here shown has no reference to their position on the rocks for two miles north and fully half as far south of the Narrows. All the groups are given as they appear, but it is not at all likely that one of them had any reference to another. I now regret, however, that we were not careful to note the relative positions of the groups.

PLATE III.

PLATE IV.

Figures 8, 10,* 11 and 12 look like direction marks, as do the arrow-like drawings, but it is puzzling to decide how they could have served such a purpose, painted as they are on a perpendicular surface. Some of the arrow forms may have been meant to represent men, as may also have the upright forked crosses, in accordance with what we know to be the practice elsewhere among Indians. We are tolerably safe in reading the figures 14 and 18 as trees, but the other drawings on this plate convey no meaning to us, unless we deduce from figure 26 a suggestion of thunder and lightning, on account of the resemblance the fence-like part bears to clouds from which rain is falling†—but this, like any other guess, may be far astray.

Figure 27, plate II., covers the largest area of rock surface. Beyond the straight lines, the longest of which measures two feet, nothing is clear, but beneath these is a mass of blurred and half-faded pigment, which at a distance of five or six yards suggests a man on horseback, but this is quite out of the question, unless we see more reason to assign a comparatively recent date to the petroglyphs. Figure 28 forms part of this group, but has been placed half its own width too low in the plate to make room for figure 29.

In the latter group we see what is perhaps meant for a human figure. The lower portion is indistinct, but close behind, a three-barred symbol is quite plain.

Figure 30 should be nearly perpendicular, inclining only a few degrees to the left, and resting on the foot-like projection.

Figure 31 is suggestive of a canoe, and there can scarcely be a doubt that one is represented by figure 35, in which a man is standing. In the position occupied by the small cross above this canoe, figure 12, plate I., should be understood, but want of room has crowded it out of place.

Figures 37 and 39 seem to tell complete stories. In the former we have what was probably intended to depict a moose, although, owing to the absence of the head outline, this is only a matter of supposition. The smaller animal may be a dog, and the branching upright a tree, but beyond this we cannot even guess. The length of the "moose" is a foot and a half, and of the "dog" five inches. The dotted outline to indicate the head of the larger animal is almost purely imaginary. I have seen a hurried sketch made by Mr. R. J. Drummond, of Perth, giving the head a very different appearance, and Mr. Drummond is an excellent amateur artist. The upright lines on the back are inexplicable.

Figure 39 is probably intended as a hunting event—the canoe, the wolf, or deer and the turtle completing the group, although the last mentioned is somewhat indistinct. But for the length of its tail the other animal might be taken for a deer, which had been driven into the water by the men in the canoe.

The last figure on plate II. looks like that of a man, but it is somewhat obscure.

The dimensions given on some of the lines will enable the reader to understand the proportions of these Lake Massanog, muzzinabiks, or rock-paintings.

* Referring to a western Algonkian tribe, Col. Mallery says, "The cross signifies, I will barter or trade. . . . Being a drawing of the gesture sign for *trade*, the arms being interchanged in position." Report of the Bureau of Ethnology for 1888-89, p. 603.

† Idem pages, 700-701. The Objibwas represented clouds as arcs of a circle—hollow side down—from which extended lines to indicate rain. On a rough rock it would be necessary to draw heavy lines to bring out the idea.

OTHER ROCK PAINTINGS.

Mr. W. J. Morris has frequently informed me of paintings on the shore of another lake still further east than Massanog, and there are said to be traces of some on the shore of the St. Lawrence a short distance below Brockville. Regarding the latter I have been told that it was the custom of some Indians within recent years to visit this place annually for the purpose of renewing the drawings.

Colonel Garrick Mallery, in the volume already quoted from, writes: "Mr. Charles Hallock kindly communicates information concerning pictographs on Nipigon Bay, (*sic*) which is a large lake in the Province of Ontario, 30 miles north-west (*sic*) of Lake Superior, with which it is connected by Nipigon river. He says: 'The pictographs which are principally of men and animals, occupy a zone some 60 feet long and 5 feet broad, about midway of the face of the rock; they are painted in blood-red characters, much darker than the color of the cliff itself.' He also encloses a letter from Mr. Newton Flanagan of the Hudson Bay Company, an extract from which is as follows:

'About the dimensions of the red rock in Nipigon bay, upon which appear the Indian painted characters, as near as I can give you at present, the face of rock fronting the water is about 60 feet, rising to a greater height as it runs inland. The width along the water is something like 900 yards, depth quite a distance inland. The pictures are from 10 to 15 or perhaps 20 feet above the water; the pictures are representations of human figures Indians in canoes, and of wild animals. They are supposed to have been painted ages ago, by what process or for what reason I am unable to tell you, nor do I know how the paint is made indelible.

As far as I can gather, the Indians here have no traditions in regard to these paintings, which I understand occur in several places throughout the country, and none of the Indians hereabouts nowadays practice any such painting."

Owing to the evident confusion in these paragraphs, of Nipigon Lake and Nipigon Bay, it is impossible to learn from the statements where the rock-paintings are, but assuming that the Hudson Bay Company's officer was not likely to make any mistake in naming the Bay as the place, I wrote to Mr. Peter McKellar, of Fort William, for further information, as there are few men better acquainted than he is with all the local features in that part of the province. His reply is to the effect that he is unaware of anything of the kind existing on Nipigon Bay. This, however, is not conclusive, but meanwhile we cannot decide where to locate the paintings referred to.

Still further west, Mr. A. C. Lawson, formerly of the Geological Survey of Canada, has described an instance of rock-carving as well as one of painting in the Lake-of-the-Woods. The former occurs on the south side of an island in the northern part of the lake. Mr. Lawson comparing the inscription marks with the glacial grooves on the same rocks concludes that considerable antiquity must be ascribed to the carvings. On another island known to the Indians as Ka-ka-ki-wa-bic-min-nis he found inscriptions painted in ochre.

As there are doubtless examples of rock-painting, and rock-carving hitherto unreported the writer will feel obliged for such information as may enable him to make a list of these occurrences. Detailed accounts, accompanied by photographs if possible, are especially desirable. Where carvings exist perhaps the best way to get exact copies is by means of what is called a 'squeeze,' that is to

say, a sheet of thoroughly damp, coarse brown paper, is spread over the surface to be copied, and there held accurately in place, while with a brush (a good shoe brush will do) the paper is gently beaten until it is certain that every portion of it conforms to the face of the stone. Should "breaks" appear in the paper, they may be covered with patches and similarly treated. Two or three damp sheets may be added in succession, with or without paste (preferably with paste when convenient). Let this remain on the rock until it becomes dry. No attempt should be made to roll the sheets into small compass unless the markings are very coarse. If it prove needful to reduce the size, cut the sheet irregularly as best to suit the markings, and there will not be any difficulty in arranging the pieces afterwards.

If the work to be copied be a painting, careful drawings should be made when photographing is impossible, and query marks should be placed where the outline is obscure, or otherwise doubtful. In such cases no two copyists would be likely to agree, and it is in every way better to say that so-and-so is not clear, than to imply that the copy is accurate. Dimensions of the figures should be taken in such a manner that they will assist when the first drawings are being more carefully copied for the engraver.

Lot, concession and township should be recorded, and as many topographical details as possible should be noted, with everything that can be gathered relative to Indian occupation, date of settlement, and the first observance of the paintings.

As no possible good result can follow the obliteration or destruction of such paintings and carvings as are here referred to, those persons on whose property they exist should do everything possible to preserve the aboriginal records. The feelings of a common humanity alone should dictate this course, aside wholly from the interest that work of the kind possesses, not for the student only, but for everyone who cares to cast a thought over the course travelled by his race, if not on this continent, on some other one; for those who have gone fastest and farthest, did so by similar stages in the earlier part of their journey.

LANARK COUNTY.

The number of specimens from this county having been considerably increased during 1895, it is possible to mention at least two features that characterize them as a whole. One of these is the disproportionately large number of poorly finished celts or hatchets. Not more than three per cent. of these tools possess the finish that marks implements of the same kind found in the counties that lie between lakes Erie and Huron, although they are but little inferior to specimens found in the immediate vicinity of Toronto, and in the old "Huron country." Most of the eastern celts had no more work expended on them than was barely necessary to make them serve their purpose. A good cutting edge was produced, and beyond this no trouble was taken to bring the tool into shape, except that the corners were rubbed down a little, and unusually rough spots were subjected to a similar process—this was all. Some were designed for use as axes, and others as adzes, judging from the amount of bevel given to opposite sides of the cutting edge; and a degree of smoothness on the corners of some of them, about half-way between the two ends is suggestive of some binding material having been employed to fasten the tools to handles. It is not unlikely, however, that many of them were held directly in the hand. If employed to remove charred wood, in the course of shaping canoes for example, tools of this kind might have been quite as effectively used in this way as if attached to a handle. A few of those

that approach most closely in form to the western type are much weathered, and thus have the appearance of greater age than the rudely made specimens, but their present condition is probably owing to the quality of the stone, a coarse granite, some varieties of which disintegrate rapidly when exposed to the air.

It cannot be said of the rudely formed celts, as is held regarding certain 'flints,' that they are "rejects," or that they are only partly finished. Everything leads to the belief that they were as complete as the makers intended they should be—that, in fact, the toolmaker had no desire to bestow on them any more than barely the amount of labor requisite for the work they had to do, whatever that may have been. In other words, the production of fine axes and adzes was not a fad, or a whim—was not fashionable—among the people who long ago lived in the valley of the Ottawa.

That, at any rate, the lack of symmetry and polish on the celts in question was not due to a deficiency of taste or skill on the part of the workman, is borne out by the unusually large number of well-made 'gouges' produced by the same people. From the limited area in which Dr. Beeman has had to carry on his work, we have received nearly fifty of these stone implements, and many of them exhibit traces of high finish, and several specimens found in an almost perfect condition are marvellously fine results of aboriginal industry. One of these gouges is figured and described elsewhere. (Figure 61.)

Nowhere else in the province have so many tools of this kind been found in proportion to the number of other relics, and perhaps the Lanark district is unique in this respect so far as the whole continent is concerned. Some of these correspond to what may be called the normal type, but the variations are numerous and may be described only with the aid of illustrations. Taken altogether the collection of gouges from this section is remarkable.

The number of slate gorgets is not large, but is sufficient to show a similarity of taste between the people who resided here and those who lived farther south and west. Pipes, either of stone or of clay, are not so numerous as might be expected, but some good specimens of both have been found. Our Lanark collection contains only one "banner-stone," and it is in an unfinished state. One very handsome bird-amulet is all the district has yielded of this type. Flints have been found in considerable numbers, and specimens of quartz weapons occur more frequently than anywhere else in Ontario. Recently, several felsite objects have been found, and considerable interest attaches itself to these, more perhaps on account of their peculiarly palæolithic appearance than because of the unusual selection of this material. A larger number of felsite specimens must be collected before it will be possible or judicious to arrive at conclusions, now barely suggested by those we have. See Figs. 21, 22, 23.

What follows regarding this county has especial reference to the shores of

Lake Rideau.

So much valuable material has been brought together from the shores of this lake during recent years, by Dr. T. W. Beeman and a large number of intelligent coadjutors who have become deeply interested in his work, that the locality is now one of the best represented in the Provincial Archaeological Museum. Mrs. McLaren, of Perth, having very kindly placed her yacht, the *Geraldine*, at my disposal for the purpose of examining what have been extensively occupied localities on the shores of the lake in Leeds, as well as in Lanark, two days were spent in going over the ground.

The water being unusually low last summer, a very large area of land was left dry, for when the water is at its normal level, since the construction of the Rideau Canal, it covers hundreds of acres to a depth of not more than two or three feet. It is mostly on the land thus submerged, or very close to it when the water is high, that the largest number of specimens have been collected.

What has evidently been a populous and long established aboriginal settlement is on Plum Point, a small promontory in North Elmsley. Here the lake is not more than half a mile wide, and the shore is covered with blocks of Potsdam sandstone, from a few inches to several feet in diameter. A little to the east of this the surface is free from stones, but every yard almost, yields evidence of occupation. The soil itself consists largely of ashes to the depth of a foot, and even more in some places, and this condition is said to be apparent at intervals northeastwards as far as the Tay, half a mile distant. The finds made along the shore at and near Plum Point are almost wholly free from signs of European contact, almost the only exception to this being a small triangular ear-drop, or pendant, of what seems to be blue glass of mottled appearance, when held up to the light. It is nearly equilateral, measures five-eighths of an inch on the side, and has a small hole, roughly bored, near one of the angles. A small semi-circular copper blade, three and a half inches in length, three eighths of an inch wide, and provided with a sort of tang at each end, on the same plane as the curve, but at an obtuse angle to it, was picked up by Dr. Beeman on the occasion of our visit.

Fragments of pottery, although not rare by any means, do not occur so frequently as on western village sites. Specimens made from bone are scarcely ever seen. Steatite has been in some request, but less so than might have been expected. Numerous rubbing-stones occur—some slightly hollowed, some deeply furrowed, and others well rounded on the edge. Several excellent spear or lance-heads (if they were not knives) have been found, and “flints” of various sizes, but much alike in shape, are not uncommon. Scrapers sometimes take a form not seen anywhere else. Celts and gouges are often found, the former anything but well-finished, while the latter are mostly characterized by their excellence of form. A few pipes of steatite and clay have been collected, but they are not numerous.

Squaw Point is in South Elmsley, Leeds county, almost directly opposite Plum Point. Here also there has been an extensive settlement. Many specimens have been collected at this place, and several very fine ones were procured by Mrs. McLaren during one of the days of our visit.

Everything that was found on both Points and on Sand Island, a little farther to the north-east, is now in the Museum.

A valuable feature of many specimens from this locality is their unfinished condition, by means of which, in several instances, hints have been afforded relative to working methods.

The amount of material we have from this section of Ontario is now sufficient to enable us to make an intelligent comparison with what is yielded by other places, and it is proposed to make a special study of the specimens from Lanark county in the report for next year.

In another part of this report will be found a list of the year's accessions from Lanark, with the names of those who have so willingly co-operated with Dr. Beeman in bringing together a large quantity of material—material which, if widely scattered and in private hands, would be practically valueless for any scientific purpose.

Unlike many elsewhere, his assistants have given their finds freely, and without the remotest allusion to any mercenary consideration. The only outlay has been in payment of labor on a few occasions when it was desirable to take advantage of low water in Rideau Lake.

FLINTS.

FIG. 2. FIG. 3. FIG. 4. FIG. 5. FIG. 6. FIG. 7. FIG. 8. FIG. 9.

FIG. 10. FIG. 11. FIG. 12. FIG. 13. FIG. 14.

(All full size).

FIG. 19.

Of late years "Flint Jacks" have been on the increase, on account of the demand by collectors for rare forms of flaked specimens. While the naked eye

may readily be deceived by the appearance of weapons that have been altered in form to produce something singular, and, therefore, more marketable, it is comparatively easy, with a lens of even low power, to distinguish where the patination has been destroyed, although it is affirmed that some European fake-flakers have discovered a process by means of which the patina may be artificially and speedily restored. In this country, however, no such attempts have, so far, been reported, although we may expect to hear of them some day.

The specimens here figured are all from the county of Brant—most of them from the township of Tuscarora, where they were collected over a period of many years, by Chief Deh-ka-non-ra-neh, a Mohawk. They are all represented full size, and the originals are in every instance (with some two or three exceptions) made from the chert which has supplied the material for most of our Ontario weapons and tools of the kinds typified.

In point of variety as to outline, these specimens (figures 2 to 19) from near what was in all probability the chief town (Kandoucho) of the Neuters or Attiwandarons, will compare favorably with flaked or chipped objects found in any other part of America. Indeed, should fanciful forms not be discovered in this part of the country, it would be almost needless to search for them anywhere else, for among all the Indians known to have inhabited Ontario at or before the time it was visited by the French trader and missionary, the Neuters, on account of their immunity from invasion, their command of the "flint" supply, and the generally excellent natural resources of their country, led a life of comparative ease. In these circumstances it is not unreasonable to conclude that the natives would employ some of their leisure in devising and working out unusual shapes. It is a fact that "ceremonial" objects of Huronian slate, highly finished, are much more numerous in the Attiwandaron country than anywhere else in this province.

It might be difficult to decide whether the smallest of the arrow-tips here figured were intended for use, and if so, what? or merely as playthings for children. Perhaps most of the specimens illustrated were more for ornament than use. Even a savage would hardly expend much time, skill and labor on that which, if once driven from his bow, he might never see again, or see only to find it ruined. As with the bone specimens we call needles or awls, it is not improbable that fanciful forms of "flints" were employed to fasten the clothing about the body. In this capacity they would also serve as personal adornments. In the absence of a wide range of material, and none of it very rare, the value of Indian jewelry must have depended mainly on form and finish.

The specimens figured with rounded or blunted ends reminds us of "scrapers," and may, indeed, have been used as such.

FIG. 20. (Full size).

The only interesting feature connected with the accompanying figure consists in the fact that the two arrow-heads are bound to each other by means of a small strip of copper, apparently of European origin, as there is hardly a doubt that it has been cut from some fragment of an old pot or kettle of this metal.

These specimens may be regarded as curiously symbolic of the coming together of the two races.

They were presented to the curator personally, a good many years ago, but the record of the donor and of other particulars has been lost. Should this meet the eye of the gentleman who presented them, he will confer a favor by supplying information relative to the place and circumstances of this interesting little find.

Among the most noticeable specimens added to the Museum during the past year are several of flesh-colored felsite. Figures 21 to 23 may be regarded as representative of the lot, although one of them, not figured, is fully as large as all these together, and some of them present no attempt at being notched. The extreme palæolithic appearance of these "felsites" is so striking as to make one wonder, whether after all America had not a pre-glacial type of man. It is quite out of the question to regard such specimens as "rejects." Extremely rude as they are, there is yet nothing in the nature of the stone to have prevented the ancient workman from bringing them into better shape. Neither are they indicative of unskilfulness on his part. He evidently understood the nature of his material, knew exactly what form he wanted to produce, and did so in no hap-hazard fashion. Figure 21 is a comparatively light, but well balanced celt, three and three-fourth inches long, and two and a fourth inches wide. Each end is sharp—the lower one has been regularly flaked on both sides—but the implement does not appear to have been used.

21—Half dia.

22—Half dia.

23—Half dia.

Figure 22 is of a different type, and much heavier in proportion to its length, for while it measures in this direction only half an inch more than the former it is an inch and a half in thickness, or three times that of figure 21. The blade is coarsely flaked to a cutting edge all round, but special attention has been paid to making the lip thin and sharp. At the end of a stout handle, as the notches would seem to have been intended to hold, this would prove a very effective weapon at close quarters.

Figure 23 not unlike the former in side outline is very thin. Its dimensions are two and five-sixteenth inches long, one and five-eighth inches wide, with an average thickness of less than half an inch. The material is of a deeper color, almost like red hematite, and is of finer grain as shown by the result of the chipping.

SLATE TOOLS.

It is not always the most beautiful, or most highly finished object that possesses the greatest attraction for the archæologist. The specimen here figured is

Fig. 24.

absolutely unlovely, and yet it is a really marvellous example of aboriginal skill in the manipulation of stone. It is a piece of Huroni-

an slate almost thirteen inches and a half long, three sides of which have been sawn into tolerably plane surfaces, while a good beginning has been made on the fourth. The intention seems to have been to form this into a chisel of some sort—perhaps what is occasionally referred to as an “ice chisel” several specimens of which are in the Museum. Whatever the purpose was, the work has been performed in accordance with a well designed plan, for while two opposite sides are nearly parallel, a third one is made with a slight outward curve, to which it was obviously the intention that the opposite and still incompletely worked side should correspond. This extremely interesting and instructive specimen was found near Lombardy, Township of South Elmsley, Leeds County, by Mr. Nelson Covell, by whom it is presented.

The specimen of which a figure is here shown is simply a slate pebble, four and a half inches in length, an inch and a half wide, and three-fourths of an inch thick, on which there is no evidence of work to bring it into shape, but which is deeply worn on both edges, and is considerably battered at the ends. The worn portion is too deep to be the result of wear in connection with attachment to a handle for hammer purposes, because the tool is so light. The hollowed portion on each edge is sharply shouldered towards opposite ends and at a slight angle, and its general appearance suggests that the stone was held between the operator's two hands and worked backwards and forwards along some cord or thong that surrounded it, the purpose probably being to smooth, stretch, or render supple the sinew or fibre so operated upon. The battering on the ends may be the result of blows that were occasionally struck in connection with some other part of the work.

Fig. 25.

The tool referred to was picked up on Lake Erie shore, in Elgin County.

Figure 26 shows the proportions of what is the largest, if not the heaviest stone implement in the Museum. It has been suggested that the use of it was to break ice on the surface of springs or streams, but this is wholly supposititious, as any common hatchet or heavy flint would answer this purpose, and it is therefore, not likely that a special form of tool would be made to accomplish it, especially a tool on which so much labor had been expended. It is probable that at least an inch has been broken off one end, but even in its injured state it measures fifteen inches in length. At one time it seems to have been the intention of the workman to cut this piece of stone along lines different from those latterly followed, and the shallow-pecked “scribing” may yet be seen almost continuously from end to end. From North Yarmouth township, Elgin county.

Fig. 26.

A WELL WORN ADZE.

Not one in a hundred of the plain celts, or hatchets, or of the adzes shows any sign that it even was attached to a handle. The adze (six and a quarter inches long) represented by figure 27 is an exception. On what has originally been the flat face of this tool the abrasion of thongs used to fasten the handle has not only worn the corners deeply, but has reduced by three-sixteenths of an inch the whole body of the stone.

Fig. 27.

It is noticeable, however, that the wear has been almost wholly effected on the flat side of the tool, as if the rounded side had been in contact with the handle, and the thongs therefore, binding the two by passing round the former side, just the opposite of what the form of such tools would suggest, but this one may have been employed in some exceptional way. In any event it must have seen many years of service to be in its present condition.

The stone appears to be a very fine grained syenite, capable of taking and keeping a good edge. The adze is from the Brandon farm, near Talbotville in Elgin County—not far from the celebrated earthwork in Southwold.

CLAY PIPES.

Figure 28 represents an exceedingly remarkable form of clay pipe. The two chambers of the bowl open into each other immediately below the point of junction, so that one stem hole was sufficient to communicate with both. The workmanship on this pipe is not of the highest quality—there is no attempt at ornamentation and the twin portions of the head are neither round, nor oval, obviously the result of awkwardness in manipulation. This specimen is one of several found in the township of Harvey, Peterborough county, by Mr. Jas. Cairnduff, of Bobcaygeon, and kindly presented to the Museum by him.

Fig. 28. (Half dia.)

Figure 29 represents a very well executed human face on the bowl of a clay pipe. Although the features are strongly marked, they are not distinctively Indian. The ears are pierced. The eyes have been carefully moulded to give expression—a less successful attempt has been made to form lips, but the chin and cheeks are fairly well modelled. As in most cases the face looks along the stem. Found in Harvey township Peterborough county and presented by Mr. Jas. Cairnduff.

Fig. 29. (Half dia.)

Fig. 30.

Figure 30. This ornament from the head of a pipe bears some resemblance to Indian physiognomy, but the specimen men is chiefly interesting on account of the way in which the hair is arranged. This fragment is only an inch and a half in length. Mr. James Cairnduff, Harvey township, Peterborough county.

In these figures (31 and 32) we have represented a pipe-stem of very singular shape and style of ornamentation. The two sides are wholly unlike in design, and on

Fig. 31. (Half dia.)

Fig. 32. (Half dia.)

the one bearing the diagonal pattern the markings though deep are much less so than those on the opposite side, where at the

deepest parts they are nearly one-fourth of an inch below the surface. Along each edge also, there is a deep groove. Short as this stem is, it was meant to be held immediately in the mouth, as it is much reduced in size at the end, and the hole is too small for the insertion of anything larger than a quill. This most unusual form was found in Harvey township, Peterborough county, by Mr. James Cairnduff.

Perhaps the Indian allowed his fancy or his whim to play more freely in pipe-making than in any other branch of industry. While it is true that certain types prevailed in given localities, individual pipe-makers evinced considerable originality in the forms they produced. If economy of space for convenience in carrying was the object of him who made the specimen illustrated by figure 33, he could scarcely have produced anything more compact, as the stem in all probability was not more than an inch in length, which would have made the total length two inches, or just the same as the height, while at the mouth of the bowl it measures an inch and a quarter from front to back, and is only five-eighths of an inch wide. Edgewise, the bowl narrows rapidly inside, from a little over an inch to about three-eighths of an inch in its longer diameter, so that the charge of tobacco or other smoking material could not have been a very heavy one. This pipe was found on lot seventeen, concession two, township of Malahide, by Mr. George C. Peacock.

Fig. 33. (Half dia.)

Figure 34 represents an almost perfect specimen of clay pipe, small in size, and correct in outline. It appears to have been better burnt than is usual, and looks as if it had undergone long usage. The bowl is an inch and three-fourths in height, and the stem is two and a quarter inches long—both measured from the outer angle.

Fig. 34.

It was presented to the Museum by Master Garnet Page, who found it on his father's farm, lot thirty-two, south half of broken front, Bertie township, county of Welland.

Fig. 35. (Half dia.)

This little clay pipe presents a few peculiarities. Both stem and head are square, or were intended to be so; the walls of the bowl are unusually thin, and the ornamental pattern is of a kind seldom seen. It was found in Elgin county, and procured from Dr. Tweedale, jr.

The exceedingly diminutive pipe shown here half diameter, was found at the "Fort" on the farm of Mr. R. Shaw Wood, lot 20, con 4, London township. It is not a fine piece of work at all, and may have been made by a child, or for the use of one. This, with numerous other specimens was procured from Mr. Wm. Mathe-

Fig. 36. (Two thirds dia.)

son, one of Ontario's most indefatigable collectors, and to whom the county of Middlesex especially owes much for the pains he has taken to bring together hundreds of valuable specimens, which but for him, would probably have been lost.

STONE PIPES.

Figure 37 shows a neat little pipe (an inch and a half long) of soapstone found on lot twenty-seven, concession C, Scarborough township, York county. It is a deep black, and highly polished. The margin of the bowl is surrounded by a row of neatly cut lines, perhaps for embellishment, but the apparently intentional breaks in the series suggest that a reckoning of some kind may have been made here. This with other specimens was presented by Mr. Robert Martin of Scarboro', who found them.

Fig. 37. (Full size.)

FIG. 38. (Half dia.)

The pipe figured here when in a perfect state must have been of elegant form. It is remarkably well made showing few traces of tool-marks. It is made of rich, dark amber-colored soapstone, and was found by Mr. Samuel Wilson, on lot 22, concession 5, Bathurst township, Lanark county. Mr. Wilson presents it through Dr. T. W. Beeman.

Figure 39 is a peculiar specimen of pipe on account of the triangular transverse section presented by its stem, and from the

FIG. 39. (Half dia.)

FIG. 40. (Half dia.)

fact that a bead has been neatly carved to offset each angle. Two of these beads extend nearly to the margin of the bowl, but the one on the base of the stem terminates just where the head begins. This pipe is made of gray soapstone. It was found in Harvey township, county of Peterborough, by Mr. James Cairnduff.

The soapstone pipe figured in this cut is remarkable for the long, flat tail or projection underneath the bowl. The total height of the pipe is three and three-fourth inches, the projection alone measuring two inches. This lower part is three-eighths of an inch thick where it unites with the base of the bowl, but it is only half that thickness at the end. The stem is a flattened oval (like that shown in figure 38), seven-eighths of an inch wide. It was probably longer at one time, as the end appears rough, or only rubbed down enough to remove angles.

This singular specimen was found by Mr. Alexander Parks, of Eganville, on the bank of the river Tay, South Sherbrooke township, Lanark county.

FIG. 41. (Half dia.)

diminishes to less than half of that at the bottom, an inch and a quarter deep. The stem-hole which enters from the widest side is half-an-inch in diameter, but narrows rapidly to nearly an eighth where it meets the one forming the bowl. On the other two sides a turtle is rudely carved. This pipe was found in South Yarmouth township, Elgin county.

The unfinished pipe illustrated by figure 42 was found in a field near the Brant House, not far from the lake shore, in Nelson township, county of Halton. It is of a type not uncommon in Ohio, and known as platform, or monitor pipes, the latter name having been given to them from their resemblance to the turret warship "Monitor." The material of this pipe is exceedingly hard—probably quartzite, and the amount of labor expended to bring it to its present shape must have been extraordinary. Only a little polishing has been done, and the marks of pecking are still visible over most of the surface. Boring to form the hole has been begun, but the cavity formed is

FIG. 42.

less than three-eighths of an inch deep, and scarcely half an inch in diameter. The work of boring appears to have been performed by means of wood and sand, for not only is the bottom of the hole nicely rounded, but the entire surface is free from the striæ left by stone drills. Indeed, it would be impossible to perforate this material with a chert instrument, itself no harder. A wooden drill, therefore, revolved by means of a bow, and aided by sand and water would seem to have been the only method by which it was possible

to make a hole in this stone. No doubt the process must have been an exceedingly slow one, but patience on the part of the workman would enable him in the course of months, or of years—perhaps of nearly a life-time, to complete his work. As the diameter of the intended bowl averages an inch and three quarters while that of the hole is less than half an inch, it was probably the intention to widen the boring by other means after the completion of the drilling, or, it may have been that allowance was made for a certain amount of necessary enlargement near the margin, as the hole deepened. This, however, would be less likely where a wooden spindle was employed than if a stone drill of any kind had been used. At one end of the projecting base, the merest beginning of a stem-hole may be seen. In this instance the shorter and thicker end has been chosen for the stem, whereas in most pipes of this kind the longer end has been selected.

The length of this fine specimen along the base is five inches, and the height is three and a quarter inches.

It was found by Master Richard Lewis, son of Mr. John Lewis, of the *Toronto Globe*, and was kindly presented by him to the Museum.

Since the foregoing was written it has occurred to me as not improbable that while the ultimate purpose of such a specimen as Fig. 42 was no doubt that of a pipe, it may have been employed primarily as a head-piece when using the bow-drill. Something hard must have formed a seat for the head of the drill shaft, and such seat must have become, in course of time, deeply pitted. It is not beyond what we know of Indian skill and ingenuity, to suppose that the ancient workman was intelligent enough to take advantage of the consequent wear, to assist him in producing the largest cavity for a pipe in a stone so hard as quartz, while

at the same time he could not have found anything better adapted for a head-piece when using his drill. As in the case of other surmises this may be very wide of the mark, but the appearance of the hole rather lends color to the thought, and the base of the specimen is admirably adapted to fit against the brow, or, indeed, to be pressed by any part of the body in connection with the employment of a drill, whether worked by one person, or by two, for the latter method was, no doubt, sometimes found necessary.

PENDANTS.

This pendant-like specimen is from the farm of Mr. F. Crone, Arkona. It is a gray slate, unstriped, and measures an inch and three-fourths across its two longer diameters, being an inch in thickness below, and three-eighths of an inch thick at the top. The evidences or appearances of wear are but slight, and are on what would be the lower rather than the upper side of the hole if the article had been worn as a drop, or pendant. The irregularity of form is unaccountable, as articles of this material are usually marked by considerable care to produce correspondence in all their parts. As may

FIG. 43.

be seen from the cut, one edge is broad—three-eighths of an inch—while the opposite edge is scarcely a third of that, and while the corner at the base of the latter edge is comparatively well-defined, that on the opposite side is rounded. Perhaps the specimen was left in an unfinished condition.

The specimen represented here (one and three-eighth inches long) is an accurate piece of work, all things considered. It is more nearly exact in its sides and angles than most men, not lapidaries, would produce with the aid of good tools. The stone is Huronian slate, and not difficult to work, and yet one cannot help being struck with the nicety that characterizes Fig. 44. All the corners are delicately rounded, and the polish is probably as high as it is in the nature of the stone to take. The holes have been carefully bored—not mathematically in the centre of each side, but very nearly so—and the drills have left as clean pieces of work as if they had been part of the best machinery. In each case the perforation has been made from one side only—at any rate there is nothing to indicate the reverse—and the longer one is wider by half at the lower than at the upper end, where it measures only an eighth of an inch in diameter. This specimen was procured from Chief Deh-ka-non-ra-neh, of the Tuscarora reserve, Brant county.

FIG. 44.

Was this an ear ornament? It is two and five-eighth inches in length, and a quarter of an inch thick. The broad end is brought to an edge from each side, and the point is fairly well rounded. Similar specimens have been found at wide intervals throughout the province, but this is the only one sharpened at the wide end.

Found on Mr. Shaw Wood's farm, lot 20, con. 4, London township.

FIG. 45.

GORGETS—AMULETS, OR TALISMANS (?).

The arrangement, or want of arrangement of holes in those specimens we have agreed to call gorgets, or tablets, is always puzzling. When a gorget has only one hole, it may be

near the end (generally the smaller end when there is any difference), in the centre or anywhere else between these two points—having two, the position is equally uncertain, except that as a usual thing they are bored in line with the longer axis of the specimen, but when the number exceeds two, even this regularity is lost sight of. Fig. 46, from the Lake Erie shore, in South Yarmouth township, illustrates how four holes have

FIG. 46.

been made in a specimen, now fragmentary. Nothing in the appearance of the holes indicates wear by suspension—on the contrary, the original drill marks are, in each case, quite visible.

FIG. 47.

The brown slate tablet illustrated by Fig. 47, is four and one-eighth inches in length, one and three-fourth inches across the widest portion and three-sixteenths of an inch in thickness. In every particular the workmanship is good. The form is not only almost symmetrical, and the finish excellent, but the whole, which shows signs of considerable wear, is unusually well bored. The twelve notches at the top were no doubt intended merely for ornamental purposes. Found on the surface by Mr. Daniel Dewer, lot 11, concession 13, township of Lobo, Middlesex county.

The specimen figured here reminds one of the “hummers” that boys sometimes amuse themselves with much to the terror of their mothers and older sisters, who declare that “they will fly off the string some day and break something, or hurt somebody.” But attempts made to produce a hum with this specimen have not been successful. The smoothness of the upper side of the hole indicates possible use as a pendent adornment of some kind, and the notches that surround the specimen are no doubt so placed by way of ornamentation. They are certainly not tally-marks. The stone is dark brown slate, three inches long, two inches wide, and one-fourth of an inch in thickness, the edges being ground down to about an eighth of an inch. It was found by Mr. Thomas Randall on lot 21, concession 18, broken front, West Williams.

FIG. 48.

Figure 49 represents a unique form, so far at least as Ontario is concerned. It is of the material (Huronian slate) which was so much in demand for what we

FIG. 49.

call ceremonial objects. As is the case with some other specimens referred to in this report, the one here figured is in an unfinished state. It is three and three-eighth inches long, and two and three-fourth inches wide, and varies in thickness from half an inch at one end to little more than a quarter of an inch at the other. The under side is rough and uneven, although some rubbing has been done to remove the inequalities. The large, central hole is from an inch and a quarter to an inch and a half in diameter, and is quite rough on the edge, which is very thin on account of the countersunk cavity worked round

it on the upper, or nearly completed side. From this side also the end holes have been chiefly bored, and they, too, have the countersunk appearance. This odd specimen was found on the farm of Mr. R. Shaw Wood, near London, Ont.

BIRD AMULETS.

"Bird amulets" have been more than once referred to in these reports, but figure 50 represents one which is unusually squat, and shows the difficulty that must have been experienced by the workman in perforating the ever present "fore and aft" holes in the base. The greatest thickness of the specimen at the breast is only five-eighths of an inch, but the holes are there fully a fourth of an inch in diameter on the outside. The length of this amulet, which came from Chubb's farm, Malahide township, Elgin county, is four inches, and it is almost an inch and three quarters across the widest part.

Fig. 50.

The bird-amulet, of which this is a cut, presents a few uncommon features. In the first place it is disproportionately long and slender, measuring from head to tail almost seven inches and a half, the greatest thickness on the base being only half an inch.

Fig. 51.

The base too, is well rounded transversely, and a little so, length-wise, so that it can be made to stand only with some care. Then, the head is destitute of the projecting eyes, which in an exaggerated form, characterize many objects of this kind, and more than the usual amount of work has been expended on the tail, which forms a flange on each side of the body, and lastly, all the angles except those along the base are relieved with shallow notches. From Tuscarora township, Brant county, Ontario.

In most respects this specimen is the opposite of figure 51. It is only three and three-eighth inches long, but it is five-eighths of an inch across the base.

The head is provided with enormous eyes, the tail is a simple prolongation of the body; there are no markings along any of the edges or angles, and the base, although a little convex from side to side is slightly concave from end to end.

Fig 52.

This specimen was also found in Brant county.

It is perhaps unnecessary to state that the three objects here figured are made of striped slate.

BANNER STONES. (?)

This specimen figured here is less finely finished than are most objects of its class. It is also destitute of the terminal knobs shown on two others in a former report. The hole, half an inch in diameter, and not exactly midway, from the ends, is almost perfectly smooth. As there would not seem to be any reason for polishing the hole intentionally, the inference is that this smoothness is the result of usage. The material is slate, one might almost say 'as usual,' but the veining is not so distinct as on many pieces. This 'anner-stone' or whatever it may have been, measures five and three-fourth

Fig. 53.

inches from tip to tip, straight across. It was found in the city of St. Thomas, four feet below the surface, and came into our possession from Dr. Tweedale, jr., along with numerous other specimens.

Instructive as are all unfinished specimens, they are peculiarly so when they possess traces of the various steps taken to bring them into form. Figure 54 is an especially good example of this kind. Although the workmanship is unmistakably that of a tyro, he no doubt followed traditional methods closely. Here we have the roughly blocked-out, and partly rubbed down material, but the work has been so wretchedly done that no amount of further labor could make it a first-class "banner-stone." The marks of the pecking process to reduce the size of the boss are quite fresh-looking, one notch has been cut down fully half way, and the second one has been marked out. In numerous specimens belonging to our collection the sides of the notches are slightly hollowed lengthwise, as if the hole had first been put through, and the cutting down had not removed all traces of the boring, but in this case the operation was reversed. The specimen is from lot 16, concession 6, township of McGillivray, Middlesex county, where it was found by the owner of the farm, Mr. Caleb Dowker.

Fig. 54.

WOMEN'S KNIVES.

This cut represents an excellent specimen of the woman's knife. As in most cases, it is of slate. It measures six inches in length, and at its widest part is an inch and a quarter. In accordance with custom the neck is notched, and the notches are so worn as to indicate long usage of the tool, which is of elegant form, and in every particular very well made. The central portion of the blade on both sides is flat and each edge is formed by a slightly rounded bevel extending from it. This specimen is part of the extensive collection made by Dr. T. W. Beeman, who procured it from Mr. James Peters, of Brooke, in the township of Bathurst, Lanark county.

Fig. 55.

Figure 56 is suggestive of European influence, on account of its resemblance to the well known bowie knife, and yet there is no reason why the original shape of the stone should not have supplied a hint as to the handle. In all probability

Fig. 56.

this was a "woman's knife," many forms of which existed. It is of argillite, ten and a half inches long, and disproportionately thick, the back being nearly an inch across at the handle, tapering to three-eighths of an inch at the point. The blade, which has a slight curve sidewise about three inches and a half from the point, is brought to an edge only an inch or so nearer the handle, thus making the working portion of the tool four and a half inches in length. The handle—three inches long—is roughly quadrangular, the corners being rounded off. A groove extending round the end of the handle and along both sides into the blade is probably the result of weathering before the stone caught the aboriginal cutler's eye. The whole of the workmanship on this specimen is very rude. Lanark county.

Of very unusual form is the tool represented by figure 57. It is nearly eight inches long, and at the widest part measures an inch and an eighth, its greatest thickness not exceeding half an inch. In cross-section it is almost triangular,

Fig. 57.

what may be called the base of the triangle being formed by two planes at an exceedingly obtuse angle which disappears at each

end of the tool by becoming slightly rounded, on account of the rubbing or grinding which has been done to make a chisel edge at one extremity and to bring the material (Huronian slate), to a point at the other. Although this specimen has been somewhat injured, it is sufficiently perfect to exemplify the correctness of the savage workman's eye, for it would not be easy even with modern appliances, to produce anything in stone, more accurate in outline. The smaller end has lost probably a quarter of an inch, but the condition of the angles close to the fracture leaves no doubt that here the tool terminated in a point. The chisel end does not appear to have ever been brought to a fine edge as it now presents a perfectly flat, though thin, face, not at all having the appearance of dullness as the result of wear.

It is difficult to conceive of the use to which a tool of this kind could have been applied, unless in the preparation or dressing of skins, as were other forms of women's knives.

The material is altogether too fragile for being brought into contact with wood or bone. It is far more likely to have been employed as a skinning blade, than are the numerous celts or hatchets popularly so regarded.

Whatever its purpose may have been, it is one of the best specimens in the Museum, of aboriginal skill in the production of a symmetrical form. It was found on lot 16, concession 7, township of Bathurst, Lanark county, by Mr. Edward Macdonald, who presented it to the Museum.

TUBES OF STONE.

The use of stone tubes is a matter of conjecture, and references to the various theories entertained regarding them have been made in former reports. The specimen here figured differs somewhat from all the other objects of this kind now in the Museum. The material is similar to that of the others (Huronian slate), but it varies from them all both in shape and in the character of the hole. Throughout the greater part of its length it is, in cross-section, a fairly symmetrical oval with a nearly uniform shorter diameter of seven-eighths of an inch, but decreasing in its longer diameter from an inch and a half at one end to three-fourths of an inch at the other, which is almost circular. The hole, which has been badly bored, is seven-sixteenths of an inch in diameter at the smaller end of the tube, and at the large end it is extremely interesting to have so good an illustration of the method adopted by the workmen to enlarge the size of perforation, and make it conform to the exterior outline of the object. This he has proceeded to do by sawing slots in the sides of the aperture, but something has occurred to interrupt the work which we have here in its incomplete state. The enlarging of a circular hole at one end of a tube (as we find in many cases)

FIG 58.

was a comparatively easy task—most of the work could be performed by means of drills, corresponding to our rimmers, more widely flaring than those with which the boring had been done, but in this case such an operation was impossible except to a very limited extent, and thus we have a fine example of the ancient Attiwandaron craftsman's skill, as it was found by Mr. W. W. Delaney on lot 14, concession 6, in McGillivray township, Middlesex county.

It may be added that in all probability the oval form given to this unfinished tube was simply the one that occurred to the workman as requiring the least expenditure of labor to bring his piece of slate into regular shape.

Figure 59 is the only one of its kind in the Museum. The material is of exceedingly fine-grained limestone. It is two and three-fourth inches long and three-fourths of an inch high at the end as seen in the cut. Although somewhat rough-looking at the small end it does not appear to be a fragment of any larger specimen, but looks rather as if the work had not been quite completed. If broken at all, a slightly upward turn on the upper side of the fractured end

FIG. 59.

is suggestive of another flare similar to the one seen in the illustration. The hole at the large or flared end is three-eighths of an inch in diameter, and narrows at a depth of one inch, to nearly three-sixteenths of an inch as it appears at the opposite extremity. The use of such a specimen is not known. It was picked up as a surface find by Mr. Wm. Hodgson on lot 12, concession 4, in the township of McGillivray, Middlesex County.

SMALL, HANDLE-HOLED HAMMER.

It is very exceptional to find any Indian tool bored to receive a handle. This fact has been referred to more than once in former reports, one of which contained an illustration and description of a hammer-stone (presented by Dr. T. W. Beeman) that had, to all appearances, been fitted in this way for a haft. The small tool shown here exhibits on its blunted ends the clearest of evidence that it has been used as a hammer, and the hole looks as if it had been filled with a handle, the sharp edges being broken apparently by pressure from within. Still it is not unlikely that the specimen had been so degraded from a former so-called ceremonial-stone, by some one in comparatively recent time, for whom the original form had lost all its significance, whatever that may have been. Slate is not good material for a hammer, and this tool was at any rate, too small to be of much use otherwise than for work that any suitable stone would accomplish quite as well when held directly in the hand. It was found on the Tuscarora reserve, Brant

Fig. 60.

county. Perhaps it is scarcely necessary to say that such specimens have no necessary connection with Indians living on reserves to-day. Tuscarora township is in what was part of the old Attiwandaron country.

GOUGES.

Of the fifty gouges collected by our friends in the county of Lanark,—a locality in which a larger proportion of these tools is found than anywhere else in the province—the specimen figured above is the finest in every respect, and the best in our collection. It is of beautiful rich brown, or dark red argillite; eight inches and a quarter long, and an inch and five-eighths wide at the lip, all the sides tapering with gentle and regular curves to the smaller end, which, as is often the case, is left in the rough, except that the highest angularities have been rubbed down. The groove in no wise diminishes the general excellence of the work. The lip is slightly damaged, either as the result of usage or of accident. It should be mentioned that the corners are chamfered much more heavily on the under than on the upper side.

FIG. 61.

Figure 62 illustrating another gouge from the same locality, is the shortest, although not otherwise the smallest, in the Museum. This specimen is only two and three-fourth inches long but is disproportionately wide—an inch and a half at the lip. The head is rough, but not at all battered. This, coupled with the smallness of the specimen, improves its use for “tapping” purposes, as is popularly supposed. It was found by Mr. George Hone, at Squaw Point, Lake Rideau, Lanark county.

FIG. 62.

NEW FORM OF STONE RELIC.

Figure 63 is in every respect unique. At first it would appear to have been almost cubical, averaging about an inch and a half on each side; the upper surface, or that from which the holes have been bored, being somewhat more oblong than the opposite one. The fractured edge and the general appearance of the specimen are highly suggestive of actinolite, as it occurs in the township of Grimsthorpe, county of Hastings. A hole fully an inch and a half in diameter, has been bored to a depth of an inch and a quarter, but a quarter of an inch from the upper side it has been scooped out until it attains a width of nearly an inch. The edge of this hole is smoothly rounded. From each corner, and at an angle pointing to the centre of the base of the large hole, another one, a quarter of an inch in diameter, has been bored. Only two of these remain intact, but a portion of a third one remains, and the inference is that another penetrated from the fourth corner. It is chiefly in connection with these small holes that the oblong form of the upper side is observable, for while the distance between the two uninjured holes is less than five-eighths of an inch, that between one of these and its opposite on the fractured edge is an inch. Half an inch below, and parallel with, the upper surface, a deep notch has extended the full length of the two longer sides, and the corners have been chamfered from above to meet the notches. What remains of the bottom is perfectly plain, but all the other sides bear series of zig-zag or herring-bone markings forming rude

Fig. 63.

patterns without any apparent regard to regularity. Portions of the fractured edge present distinct appearances, that of the longer side being much discolored as if by the action of fire, while the remaining part is comparatively fresh, except along the line of the hole, where it also looks as if it had been subjected to considerable heat. Perhaps after all, this specimen is only a whimsical form of pipe-head, the stem-hole having entered from the missing side. In any event, the object is remarkable both on account of its form and the material from which it has been fashioned.

It was found near the village of Washington, in North Brant, by Mr. Frank Wintenberg, who kindly presented it with other specimens to the Provincial Museum.

Fig. 64.

PERFORATED BONE AWL, AND BONE BANGLES.

Bone awls or needles when carried from place to place, may have been stuck into the hair, or used to fasten articles of clothing about the person. Indeed, it is very probable that the main purpose of many so-called awls was that of pins to hold portions of the dress in position. An excellent specimen of bone awl or pin from Elgin county is represented in figure 64. It is five and three-quarter inches long, and is neatly bored near the head for suspension.

Peculiarly interesting are the two bone specimens represented here (figs. 65 and 66). The fact that each is bored near the small end would indicate that they had been used as bangles, or ear-drops, or as part of a neck-lace, or in some other way about the person. They are the only specimens of the kind that have come into our possession. They were collected on lot 19, con. 3, London township.

65.

66.

(Half dia.)

INDIAN ARMOR.

We are accustomed to think of Old World peoples only, as having employed bucklers and coats of mail when engaged in warfare, perhaps, chiefly, because we associate these with the use of metals, but frequent reference is made by early writers to the employment of armor and shields among the natives of the Atlantic slope, just as we know that western tribes, until within recent times, have used defensive devices of this kind. Dr. Walter Hough has summarized what is known regarding armor in an excellent article,* from which the following quotations are made relating to this usage among the Huron-Iroquois.

Shields.—"Charlevoix, writing of the Iroquois, observes that while the western tribes use bucklers of buffalo hide, it is pretty surprising that other Indian nations never use them†." Lafitau and the earlier missionaries, however, credit the Iroquois people with the shield in the following words:

'Their shields were of ozier or bark covered with *peaux passées*: there are some made of very thick skin. They had them of all sizes, and all sorts of figures.‡

* Smithsonian Report 1893, p. 627 *et. seq.*

† Charlevoix, F. X. de, *Journal of a Voyage to North America*, Vol. I., p. 338, London, 1761.

‡ Lafitau, *loc. cit.* II., page 197.

Body Armor.—There is sufficient historical evidence that the defensive weapons of the east coast were similar to those of the west coast. The lakes and rivers with short portages rendered communication easy across this vast distance, and points out a great line of navigation, both of peoples and inventions. This is shown by the following reference:

‘Some sixty or seventy years ago, a party of Iroquois, having crossed the Rocky Mountains, reached Lake Tathá in two wooden canoes, which at once excited the covetousness of a band of Carriers [Indians] who killed the strangers for the sake of their canoes. These having been brought here [Stuart’s Lake] served as models for the building of the first home-made *dug-outs*.’ *

On the Atlantic slope there is abundant evidence to show that the Iroquois used body armor. Cartier (*Hakluyt Voyage*, Vol. III., London, 1810), speaking of the Toudamani (Iroquois, probably Onondaga and Seneca), says:

‘Also they showed us the manner and making of their armor; they are made of cordes and wood finely and cunningly wrought together.’

Laftau, whose famous work “*Moeurs des Sauvages Ameriquains*,” was published in 1724, gives a more detailed account of the defensive armor of the tribes of the north-eastern part of the present United States, and of Canada, probably referring chiefly to the Iroquois and Huron, with whom he was most familiar. He says (Vol. II., p. 197):

‘Their cuirasses were a tissue of wood, or of small sticks of reed cut of proportionate lengths, strongly pressed against each other, woven and enlaced very neatly with small cords made of deerskin. They had cuissards and brassards (defensive coverings for the thighs and arms) of the same material. These cuirasses were proof against arrows armed with bone or stone, but not against those mounted with iron.

Charlevoix says of the Iroquois: ‘Most had no defensive weapon, but when they attacked any intrenchment, they covered their whole body with small, light boards. Some have a sort of cuirass or breastplate of small, pliable rings, very neatly worked. They had even formerly a kind of mail for the arms and thighs, made of the same materials. But as this kind of armor was found not to be proof against firearms, they have renounced them without putting anything in their place.†

Sagard says that the Hurons (Iroquois) had armor made of wood.‡

Champlain also describes the Iroquois armor as made of wood and thread.§ A plate in the same volume shows a warrior in armor. Wooden breastplates were worn.|| Copper breastplates have been found like the gold breastplates of Peru.¶ One has been described as a plate of rich copper, in length a foot, in width half a foot, for a breastplate.** Lucian Carr thinks these breastplates were for ornament, like those found in the Ohio mounds.

* Morice, Rev. A. G., *Proceedings of the Canadian Institute*, 1889, p. 131. The Carriers previously had birch-bark canoes.

† Charlevoix, F. X. de, Vol. I., p. 338, London, 1761.

‡ *Voyage des Hurons I*, p. 144.

§ Champlain I., p. 201, Paris, 1830.

|| Hakluyt’s *Voyages III*, p. 305.

¶ *Jour. Anthropol. Institute*, Vol. XVIII., Feb. 1889.

** Archer account, *Griswold’s Voyages*, p. 75, Vol. VIII. 35 *Ma-s. Hist. Col.*

The only reference to eastern skin armor is of the Mohawks, who 'wear sea-horse skins and barks of trees made by their art as impenetrable, it is thought, as steel, wearing a head-piece of the same.'^{*}

LANARK COUNTY.

By T. W. Beeman, M. D.

The work in Lanark does not present any unusual features this year. A good deal of material has been collected for the Provincial Museum, the greater portion of it coming from Rideau Lake. Other localities in the county offer every inducement to investigation but so far it has been impossible to devote any attention to them. From the fact that the aboriginal remains in this section of Ontario are, presumably, of the same tribe or sub-tribe, it is all the more to be desired that some work should be done as soon as possible in making complete the collection. The specimens in the Museum from this county have almost entirely been secured from one place on Rideau Lake, the site of what was evidently a considerable town or village, in fact, so far as our work has gone, it was the only town of any size, or showing a long occupation. It is almost impossible to examine a square foot of earth without finding some evidence of aboriginal life. Fragments of pottery especially are very numerous. Broken bones, the marrow bones of animals, flint chippings, celts and arrows, both broken and complete, and many other things are found about this place. No matter how thoroughly the ground is looked over one year, the next yields a large quantity of specimens. Traces of European influence are rarely found, in fact, a single glass bead is the only thing that would suggest contact with the whites that occurs to me at present, and from this fact there can be no doubt that the town or village was deserted before or about the time of the appearance of the white people. Whether the place was abandoned as a result of long struggle between the Hurons and Iroquois or whether it was a result of the advent of the Europeans, further and more careful study may determine. It is certain, however, that some of the specimens found here are totally unlike the great bulk of the material. Whether this is a result of invasions by war parties, the result of inter-tribal commerce or from what cause, will possibly be revealed by future study. But few bone implements have been found, a fact that is no doubt due to the length of time that has elapsed since the migratory movement. Some fourteen or fifteen gouges were secured this year, all of them good specimens and a few showing a great amount of time and labor having been spent on their make. Altogether there have been about fifty gouges sent to the Museum from this county, and from the fact that they are all so well finished and that they are found here in greater numbers than in other localities, it would be a fair inference that they bear some peculiar and interesting relation to their former owners, a relation that may lead, later on, to a more accurate knowledge concerning them.

Of the celts secured, few deserve special notice. Two of them were slightly grooved. One or two of the celts were sharpened on both ends and one of the gouges was a chisel and gouge combined—the second one of that description found here. One copper spear was also added to the collection. Very few articles of soapstone are found, a fact that is difficult to understand, as large deposits of this material are found about the Rideau lakes, and it was a favorite stone with the Indians for the manufacture of many of their utensils.

Although considerable time has been spent in following up what seemed promising information, I have, as yet, been unable to find any burial places, not

^{*} New England Prospect, p. 65.

even single graves. Of course this may be due to the length of time that has elapsed since the aboriginal occupation, but it is to be hoped that we may yet find some graves in order to help more fully to determine the character of the tribe of this section.

In this, as in former years, it has been most encouraging to receive the support of everyone in this work and many specimens have been added to the collection by the generosity of people who had found them, but were willing to part with them for the Museum.

My work has been done chiefly on a small portion of the Rideau but during the summer a brief visit was paid to another part of the lake that showed every evidence of being rich in archaeological material. Another year may allow opportunities for work there.

CAVE DWELLINGS.

The examination of caves in Europe has led to numerous important discoveries. It is to a study of the underlying contents of some of these that we are indebted for the classification of early man as *paleolithic* and *neolithic*, and for the terms stone age, bronze age, and iron age, as applied to periods of primitive development.

Some investigators in America seem to think that as thorough an examination of caves on this continent will yield similar results, or results, which, at all events, may have an ethnological bearing. It is always rash to predict on insufficient data, and more so still on none at all, but I feel tolerably confident that labor devoted to the excavation of cavern floors in America will prove devoid of such results as have rewarded men of science in the Old World. Numerous caves have been opened up and dug into casually without the least indication of human occupation pre-historically, and if one may form any opinion with regard to the disposition of the American of the remote past, by the temper of his now-a-days congener, as evinced in the neighborhood of a cavern of any kind, we shall look in vain for troglodytic evidences, unless the *wendigo* had no far-back prototype to take possession of such subterranean places, or unless it can be shown that another race preceded the one we know. To the latter objection it may be replied that it is only by means of careful exploration that the question of prior occupation can be settled. There is something in favor of this view, but not so much to-day as there would have been twenty or thirty years ago, had the question been mooted then, for as already observed, a large number of likely places have been cleaned out for various reasons (some, purposely to search for human traces) without any satisfying result in this direction. A few of the most likely places in Ontario exist along the canon of the Grand River at Elora—one, more especially, at the foot of a ravine which forms the only easy path to portage beyond the falls which here descend forty feet—but in no case was anything found to indicate human habitation. In examining this one a good many years since, bed rock was struck at a depth of some three or four feet, if my memory serves me right, and the same result followed the cleaning out of even a larger cave (Kitchi-Matik's) nearly opposite to it, across the river.

Only half a mile or so down the river a pupil of mine named William Bain, found some cylindrical, purple and white shell beads on a ledge within a hole so small that a person entering had to do so head foremost, and even then could not get in more than half of his length horizontally. This, however, would seem to have been but a temporary hiding place for the wampum, some accident, no doubt having prevented the hider from returning for his property, which, it may be re-

marked, was clearly of white man's manufacture—probably from Albany or Hackensack.

Caves elsewhere in this province have been examined, more or less cursorily, no doubt, but there has been no inducement to proceed further with the work.

Mr. R. D. Meyers has examined some caves in eastern Ontario with a view to ascertaining whether any traces of their use as dwelling places could be discovered, and he has been kind enough, at my request, to supply the following information.

TWO ONTARIO CAVES.

By R. D. Meyers.

I beg to submit the following remarks on two caves, which I have examined particularly for the purpose of determining as to what extent they had been used by the Indians, either as dwellings or as storehouses. The first one is situated near the debouchment of the Marmora river into Crow bay, Hastings county, on the west side of the river and about 200 yards below the bridge, six miles north of Campbellford and two east of Healy's Falls. It had long been supposed to contain a large amount of native silver, which was said to be the source from which a famous pioneer of the Bay of Quinte district, Mr. John Bleecker, drew his supplies, and was one of several caves which were known as Bleecker's. From the fact that many years ago, an explorer, who had spent a few hours in its examination, died suddenly, the following day, there was a great deal of superstition regarding it in the minds of the inhabitants, and it was only after considerable coaxing that one could be induced to show its location. The entrance is in the river bank a few feet from the water's edge, and large enough to permit the ingress of an average man; it opens into a chamber about six feet by eight, and five feet high. There are two passages, one to the right, extending about thirty feet, to where it is filled up by silt, the other to the left, extends inward about two hundred feet where it contracts to an opening about two feet high and six inches wide, beyond this is a small chamber, with, as far as could be seen, no egress. There is a crevice running back sharply towards the river, but too small to permit a passage. The upper stratum of rocks at this point has been worn away, leaving a small triangular flat space, and on this rests a stalagmite, about the size and shape of a child's skull and of a drab color, so firmly fixed that it could not be broken off with the means at command, and so hard that it was difficult to mark with a knife. The tunnel was only high enough to sit up in with comfort at one place, in many others it was difficult to scrape through even lying at full length; it was generally narrow but there were two or three expansions, at one point reaching a width of about twenty feet. The air was pure and sweet. Several times the lantern went out but was easily relit. The stalactites were small and dirty looking. The only stalagmite seen was the one above described. The floor was of sand and small pieces of water-worn stone. There were no bats, in fact no traces of animal or insect life of any kind, and no sign whatever of the cave having been used either as dwelling or storehouse. There was one peculiarity never before noticed, viz., that the rays of light shed by the lantern seemed to be totally overcome by the dense darkness, leaving the lantern, as it were, the centre of a luminous globe, not more than a couple of feet in diameter. Careful consideration would indicate that the waters of a very large spring forced their way along a crevice in the rock, wearing it larger and larger as time passed on, until it reached its present dimensions. The clearing of the country caused the spring to dry up entirely, and at present no one seems to have even noticed, even in the wet season, any water flowing from it.

The second is situated in the 3rd concession of Tyendinaga about three miles north of Shannonville and twelve (by road) from Belleville. It is situated in a perfectly level field, about four hundred yards to the north is a ravine running southwest and northeast, which seems of glacial formation. There is a bowl-shaped depression in the field about thirty feet in diameter, and at its greatest depth about ten feet. On the north side is the entrance to the cave, about six feet high and the same in width, the descent to the floor is about eight feet perpendicular, thence over a pile of stones about fifteen feet more, making the total height inside about thirty feet and the same breadth. There is another pile of water-worn stone, reaching from the lowest point in the cave and gradually rising till it forms a junction with the roof at a point about one hundred and fifty feet from the entrance. Half-way along this rise is a rough irregular column of stone, perhaps ten feet in diameter, which seems to have been formed by the rotary flow of water. All the stone on the floor, from appearances, had fallen from the roof. About half-way along the eastern side is a small opening about two feet wide and three high, and the same in length. Beyond this the passage narrows to a few inches but reaches a height of twenty or twenty-five feet. Squeezing past this one reaches a chamber perhaps six feet wide and forty feet long, the floor gradually ascending to the roof as in the main chamber. The stalactites in this cave are very small, none having a length of more than an inch and a diameter of an eighth. There were no stalagmites, the floor and the walls were damp, and in places water exuded. There were a number of clusters of bats on the ceiling, and smaller clusters were occasionally found beneath projections on the walls. There is said to be a crevice in the inner chamber, through which a stone may be dropped and after an interval of a few seconds may be heard splash in the water, also an opening which leads through a series of galleries to an aperture in the bank of the ravine before spoken of, but they could not be found during a careful search. It is quite possible they may exist and have been covered either by accident or design. The bank of the ravine was carefully scanned for a distance of quarter of a mile, but no opening found, nor could anything in the nature of a waterway from the mouth of the cave to the ravine be discerned although that would be the natural course. There is said to be a subterranean stream near Thrasher's Corners, a few miles north of Belleville, discovered while digging a well, and one gentleman was of the impression that it might be the stream which was tapped while experimentally boring for natural gas some years ago, and which now throws a jet of mineral water fully twenty feet high. The water supply of the city is taken from the Bay Quinte, near the Deaf and Dumb Asylum, and experts say that the intake is located just at the place where a large spring exists at the bottom of the bay.

The cave is perhaps on the course of such stream which, meeting an obstruction at this point, formed an eddy, which gradually wore its way around the pillar mentioned, until, the obstruction destroyed, it sank to its natural level again. The only theory to account for the absence of a waterway to the ravine would be that the upper surface of the cave and the head of the supply were on the same level. Nowhere in this cave were to be found any traces of human occupation and the difficulty of entrance deterred animals from using it.

A full account of the exploration, with productions of several photographs of the interior was published in the *Belleville Sun* a year ago, one of the reporters having been a member of the exploring party.

It is to be regretted that there was no time to examine the other caves of this locality, there being one at the Stone Mills, near Picton, and another near Huff's Island in Prince Edward County.

SHORT HISTORICAL AND JOURNAL NOTES BY DAVID PIETERSZ,
DE VRIES, 1665.*

"As I have related the manner of living, and the appearance of the Indians at Fort Orange, I will state something of the nations about Fort Amsterdam.†
The Indians about here are tolerably stout, have black hair, with a long lock, which they let hang on one side of the head. The hair is shorn at the top like a cock's comb. . . . Their condition is bad. They are very revengeful, resembling the Italians. Their clothing is a coat of beaver-skins over the body, with the fur inside in winter and outside in summer; they have, also, sometimes a bear's hide, or coat of the skin of wild cats, or *hefspanen* (raccoons), which is an animal most as hairy as a wild cat, and is also very good to eat. I have frequently eaten it, and found it very tender. They also wear coats of turkey's feathers, which they know how to put together; but since our Netherland nation has traded here, they trade their beavers for duffels-cloth, which we give for them, and which they find more suitable than the beavers, as they consider it better for the rain; and take two and a half length in duffels, which is nine and a half quarters wide. Their pride is to paint their faces strangely with red or black lead, so that they look like fiends. They are then valiant, yea, they say they are *mannette*,‡ the devil himself. Some of the women are very well featured, having long countenances. Their hair hangs loose from their head; they are very foul and dirty; they sometimes paint their faces, and draw a black ring around their eyes. When they wish to cleanse themselves of their foulness, they go in autumn, when it begins to grow cold, and make, away off, near a running brook, a small oven, large enough for three or four men to lie in it. In making it they first take twigs of trees, and then cover them tight with clay, so that smoke cannot escape. This being done, they take a parcel of stones, which they heat in a fire, and then put in the oven, and when they think that it is sufficiently hot, they take stones out again and go and lie in it, men and women, boys and girls, and come out so perspiring that every hair has a drop of sweat on it. In this state they plunge into the cold water, saying that it is healthy, but I let its healthfulness pass; they then become entirely clean, and are more attractive than before.

The productions are various. The principal one is maize, which is their corn, and which is by us called Turkish wheat. They pound it in a hollow tree. . . . When they travel they take a flat stone and press it with another stone placed upon the first, and when it is pressed they have little baskets, which they call *notassen*, and which are made of a kind of hemp, the same as fig-frails—which they make to serve them as sieves—and thus make their meal.§ They make flat cakes of the meal mixed with water, as large as a farthing cake in this country (Holland), and bake them in the ashes, first wrapping a vine or maize leaf round them. When they are sufficiently baked in the ashes they make good palatable bread. The Indians make use of French beans|| of different colors, which they plant among their maize. When the maize (which is sown three or

* From N. Y. Hist. Society's Papers, Series II.

† The account he speaks of having already given is almost word for word that of Dominie Megapolensis, quoted in the Archaeological Report for 1890-91, p. 68.

‡ Evidently a form of Manitou, or manedu.

§ The ambiguity of this sentence will be removed if for the words "press it" we substitute *grind the maize*, and for "pressed" read *ground*.

|| Probably indigenous beans, but called "French" by the Dutch, who also called maize "Turkish wheat."

four feet apart, in order to have room to weed it thoroughly) is grown one, two, or three feet high, they stick the beans in the ground alongside of the maize stalks, which serve instead of the poles which we use in the Fatherland for beans to grow on. . . . There are also pumpkins, water-melons and melons. They dry the nuts of trees and use them for food. There are also ground-nuts, and white ground-nuts, which are poisonous to eat—a mason of the Company having died in consequence of eating one of them. They also grow here hazelnuts, large nuts in great quantities, chestnuts, which they dry to eat, and wild grapes in great abundance. . . . The Indians use a kind of hemp which they understand making up, much stronger than ours is, and for every necessary purpose, such as *notassen*, (which are their sacks and in which they carry everything); they also make linen of it. (?) They gather the maize and French beans the last of September and October, and when they have shelled the corn, they bury it in holes, which they have previously covered with mats,* and so keep as much as they want for the winter and while hunting.

There are great quantities of deer, which the Indians shoot with their bows and arrows, or make a general hunt of, a hundred, more or less, joining in the hunt. They stand a hundred paces more or less from each other, and holding flat thigh bones in the hand, beat them with a stick, and so drive the creatures before them to the river. As they approach the river they close nearer to each other, and what is between any two of them is at the mercy of their bows and arrows, or must take to the river. When the animals swim into the river, the Indians lie in their canoes with snares, which they throw around their necks, and drag them to them, and force the deer down with the rump upwards, by which they cannot draw breath.

At the north they drive them into a *fuyk*, which they make of palisades, split of trees, and eight or nine feet high, and set close to each other, for a distance of fourteen or fifteen hundred paces on both sides, coming together like a fuyk (funnel); . . . the opening is one or two thousand paces wide. When the animal is within the palisades, the Indians begin to come nearer to each other, and pursue it with great ardor, as they regard deer-hunting the noblest hunting. At the end of the fuyk it is so narrow that it is only five feet wide, like a large door, and it is there covered with the boughs of trees, into which the deer or animal runs, closely pursued by the Indians, who make a noise as if they were wolves, by which many deer are devoured, and of which they are in great fear. This causes them to run into the mouth of the fuyk with great force, whither the Indians pursue them furiously with bows and arrows, and from whence they cannot escape. They are then easily caught with snares. . . .

Striped bass "is caught in large quantities and dried by the Indians,—for at this time the squaws are engaged in sowing their maize, and cultivating the land, and the men go a-fishing in order to assist their wives a little by their draughts of fish. Sometimes they catch them with seines from seventy to eighty fathoms in length, which they braid themselves, and on which, in place of lead, they hang stones, and instead of corks which we put on them to float them, they fasten small sticks of an ell in length, round and sharpen it at the end. Over the purse, they have a figure made of wood, resembling the devil, and when the fish swim into the net and come to the purse, so that the figure begins to move they then begin to cry out and call upon the *mannetoe*, that is, the devil, to give them many fish. They catch great quantities of this fish; which they also catch in little sea-nets six or seven fathoms long, braided like a herring net. They set them on sticks into the river, one, and one-half fathoms deep. . . .

* Lined with mats?

IN WHAT MANNER THE INDIANS BURY THEIR DEAD.

"They make a large grave, and line it inside with boughs of trees, in which they lay the corpse, so that no earth can touch it. They then cover this with clay, and form the grave seven or eight feet in the shape of a sugar-loaf, and place palisades around it. I have frequently seen the wife of the deceased come daily to the grave, weeping and crying, creeping over it with extended body, and grieving for the death of her husband. The oldest wife by whom he has had children does this; the young wife does not make much ado about it, but looks about for another husband. They keep a portion of the dead in the house. I have seen at the north, * [in Canada] great multitudes of Indians assembled, who had collected together the bones of their ancestors, cleaned them, and bound them. "They dig a square grave, the size and length of a person, and over it erect four pillars, which they cover with the bark of trees ; they set a time when they will bury them, when all the friends will have a great gathering and bring ample supplies of provisions. It is accordingly announced in their village, that a great festival is to be held, with frolic and dancing. This festival continues ten days, during which time their friends come from other nations on all sides, in order to see it held, and the accompanying ceremonies which are attended with great expense. Under cover of these ceremonies, dances, feasts and meetings, they contract new alliances of friendship with their neighbors; saying that as the bones of their ancestors and friends are together in the little bundles so may their bones be together in the same place, and that as long as their lives shall last, they should be united in friendship and concord, as were their ancestors and friends, without being able to be separated from each other, like as the bones of their ancestors and friends of each other were mingled together. One of them—their chief, a magician—delivers a speech over the bones (saying) 'that if they remain thus united, their enemies can have no power over them.' They then bury the bones in the grave, with a parcel of zeewan,† and with arrows, kettles, knives, paper and other knick-knacks, which are held in great esteem by them, and cover them with earth, and place palisades around them, as before related. Such is the custom on the coast in regard to the dead. The chief doctrine held among them is the belief in the immortality of the soul by some. Others are sceptical on this point, but not far from it, saying, when they die they go to a place where they sing like ravens; but this singing is entirely different from the singing of angels.

HOW THE INDIANS AT THE NORTH ARM THEMSELVES WHEN THEY GO TO WAR.

"When I was at the North, I saw Indians who were going to war. . . . Their weapons were bows and arrows which they carry daily, and each one had in his hand a shield of leather as thick as buffalo-skin. I took it to be elk's-hide, as these animals are numerous there. . . .

* As Mynheer "David Pietersz, DeVries" has appropriated almost verbatim, the account of the Maquas, or Mohawks, as given by Megapolensis, here he is evidently following some one else, for we have no reason to believe that he was ever in that part of the country he refers to as "the north," unless within a short distance of the shore.

†Among the Dutch settlers wampun was called zeewan, seewan or seawant.

THEIR DANCES.

When they dance they stand two and two beside each other, which I have seen at the North. They dance in two, three and four pairs. The first pair carry a tortoise in their hands, * as this nation say they have descended from a tortoise-father, at which I laughed. They then asked me where our first father came from. I said he was called Adam, and was made of earth. They said I was a fool to say that he was made of a thing that had no life. I replied that it was full of life, for it produced all the fruit upon which they lived. They answered that the sun, which they looked upon as God, produced it, for in summer he drew the leaves from the trees, and all the fruits from the ground.

Anno 1643. The 22nd February, there broke out a war among the Indians. The Mayekandus,† who came from Fort Orange, wanted to levy a contribution upon the Indians of Wickquasgeek and Tapaen, and of the adjacent villages. There were eighty to ninety of them each with a gun on his shoulder. There came flying to my house, four or five hundred Indians, desiring that I would protect them. I answered that I could not do it, as the Indians at Fort Orange were our friends, and that we could not interfere with their wars; that I now saw that they were children, and that they were flying on all sides from eighty to ninety men, where they themselves were so many hundred strong; that it was displeasing to me that they should be such soldiers, as it was to mannetoe himself,—that is to say, the devil; but that I saw now that they were only children. As my house was full of Indians, and I had only five men with me, I made ready to go the fort to obtain some soldiers for the purpose of having more force in my house. So I took a canoe, as my boat was frozen up in the kill, and went in the canoe or hollow tree, which is their boat, as before related, between the cakes of ice, over the river to Fort Amsterdam where I requested Governor Kieft to assist me with some soldiers, as I was not master of my own house, because it was so full of Indians, although I was not afraid they would do any harm; but it was proper I should be master of my own house. The Governor said he had no soldiers; that I must see how it would be in the morning, and stop at night with him, which I did. The next day the Indians came in troops on foot from my house to Pavonia. . . . I spoke to some of them and they said they had all left my house. . . .

MASSACRE OF THE INDIANS.

The 24th of February, sitting at a table with the Governor, he began to state his intentions, that he had a mind to *wipe the mouths of the Indians*. . . . I answered him that there was not sufficient reason to undertake it. . . . But it appeared that my speaking was of no avail. He had, with his co-murderers, determined to commit the murder, deeming it a Roman deed, and to do it without warning the inhabitants in the open lands, that each one might take care of himself against the retaliation of the Indians, for he could not kill all the Indians. . . . So was this business begun between the 25th and 26th of February in the year 1643. I remained that night at the Governor's, sitting up. I went and sat in the kitchen, when, about midnight, I heard great shrieking. . . . (1) saw nothing but firing, and heard the shrieks of the

*Among the "Mohawks" the clan whose totem was the tortoise claimed, and were allowed precedence, having sprung as they asserted from a woman who, falling from the sky into the water, was saved by a huge tortoise that gave her a resting place on its back.

†Mohawks—Iroquois.

Indians murdered in their sleep. I returned again to the house, by the fire. Having sat there awhile, there came an Indian with his squaw whom I knew well, and who lived about an hour's walk from my house, and told me that they two had fled in a small skiff, . . . that the Indians from Fort Orange had surprised them, and that they had come to conceal themselves in the fort. I told them they must go away immediately that there was no occasion for them to come to the fort to conceal themselves; that they who had killed their people were not Indians but the Swannekens, as they called the Dutch. They then asked me how they could get out of the fort. I took them to the door, and there was no sentry there, and so they betook themselves to the woods. When it was day the soldiers returned to the fort, having massacred or murdered eighty Indians, and considering they had done a deed of Roman valour, in murdering so many in their sleep; where infants were torn from their mother's breasts, and hacked to pieces in the presence of the parents, and the pieces thrown into the fire and in the water, and other sucklings were bound to small boards, and then cut, struck, and pierced, and miserably massacred in a manner to move a heart of stone. Some were thrown into the river, and when the fathers and mothers endeavored to save them, the soldiers would not let them come on land but made both parents and children drown—children from five to six years of age, and also some decrepit persons. Many fled from the scene, and concealed themselves in the neighboring sedge, and when it was morning, came out to beg a piece of bread, and to be permitted to warm themselves; but they were murdered in cold blood and tossed into the water. Some came by our lands in the country with their hands, some with their legs cut off, and some holding their entrails in their arms, and others had such horrible cuts and gashes that worse than they were could never happen. And these poor simple creatures, as also many of our own people, did not know any better than that they had been attacked by a party of other Indians,—the Maquas. After this exploit the soldiers were rewarded for their services. . . . At another place on the same night at Corler's Hook, on Corler's plantation, forty Indians were in the same manner attacked in their sleep, and massacred there in the same manner as the Duke of Alba did in the Netherlands, but more cruelly. . . . As soon as the Indians understood that the Swannekens had so treated them, all the men whom they could surprise on the farm-lands they killed; but we have never heard that they have ever permitted women or children to be killed."

Can we wonder that the Indians, when retaliating, committed 'atrocities'? But did any Indian atrocity ever exceed in treachery and fiendishness this Dutch butchery in 1643?

PUBLIC ACCOUNTS
OF THE
PROVINCE OF ONTARIO

FOR THE
YEAR ENDED 31ST DECEMBER,

1895.

PRINTED BY ORDER OF THE LEGISLATIVE ASSEMBLY.

TORONTO :
WARWICK BROS & RUTTER, PRINTERS, 68 AND 70 FRONT STREET WEST.
1896.

To His Honour the Honourable G. A. KIRKPATRICK,

Lieutenant-Governor of Ontario.

MAY IT PLEASE YOUR HONOUR :

The undersigned has the honour to present to your Honour the PUBLIC ACCOUNTS of the Province of Ontario for the year ending 31st December, 1895.

Respectfully submitted,

RICHARD HARCOURT,

Treasurer.

TREASURY DEPARTMENT, ONTARIO,

TORONTO, February 13th, 1896.

PROVINCIAL AUDITOR'S REPORT.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, February 13th, 1896.

TO HON. RICHARD HARCOURT,
Treasurer of Ontario:—

I have the honor to present to you the Public Accounts for the year 1895.

For the information of the Legislative Assembly, I beg to submit the following Departmental Reports and Treasury Board Orders, with reference to overdrafts of appropriations under Schedule A of the Supply Bill.

Legislation—Printing and Binding\$7,000.00

QUEEN'S PRINTER'S OFFICE,
TORONTO, June 26th, 1895.

The undersigned respectfully reports to His Honour the Lieutenant-Governor in Council:—

That the appropriation for legislative printing and binding has become exhausted.

That this is due to the large amount of printing necessary in connection with the legislation of last session, many of the reports being large and expensive.

The Statutes of last session are just about completed, and will be found very large. In addition are the following reports, viz.:—"Good Roads," "Parks Commission," "Division Courts," "Bee-Keepers," "University Commission," "Sessional Papers and Journals."

The undersigned therefore requests that authority be given the Honorable the Provincial Treasurer, under the Act R. S. O., 1887, cap. 21, sec. 20, to pay the accompanying certificate, viz., \$7,000.00.

Your obedient servant,

(Sd.) L. K. CAMERON,
Queen's Printer.

C. H. SPROULE,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, June 27th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a communication from the Queen's Printer, for payment of seven thousand dollars (\$7,000 00) to Messrs. Warwick Bros. & Rutter for legislative printing and binding.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Queen's Printer, dated the 26th day of June, A. D. 1895, the Treasury Board doth hereby, under the provisions of section 20, cap. 21, R. S. O. 1887, recommend that a warrant for the sum of seven thousand dollars (\$7,000.00) be issued in favor of Warwick Bros. & Rutter on account of work performed under their contract for legislative printing and binding, as per the certificate of the Queen's Printer, the appropriation for said service having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

Legislation—Printing and Binding 4,319.59

QUEEN'S PRINTER'S OFFICE,
TORONTO, July 9th, 1895.

The undersigned respectfully reports to His Honour the Lieutenant-Governor in Council:—

That the appropriation for legislative paper, printing and binding has become exhausted.

That this is due to the large amount of work in connection with the legislation of last session.

The undersigned therefore requests that authority be given the Honorable the Provincial Treasurer, under the Act R. S. O., 1887, cap. 21, sec. 20, to pay to W. Barber & Bros. the amount named in the accompanying account, viz., \$4,319.59.

Your obedient servan

(Sd.) L. K. CAMERON,
Queen's Printer.

C. H. SPROULE, Esq.,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, July 12th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Queen's Printer for the payment of the sum of forty-three hundred and nineteen dollars and fifty-nine cents (\$4,319.59) to Messrs. Barber & Bros. for paper supplied for legislative printing and binding.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of Lud. K. Cameron, Esquire, Queen's Printer, dated the 9th day of July, A. D. 1895, the Treasury Board doth hereby, under the provisions of R. S. O. 1887, cap. 21, sec. 20, recommend that a warrant for the sum of four thousand three hundred and nineteen dollars and fifty-nine cents (\$4,319.59) be issued in favour of Messrs. Barber & Bros. for printing paper supplied under their contract, the appropriation for legislative paper, printing and binding having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

Education—Superannuated Teachers 2,500 00

EDUCATION DEPARTMENT,
TORONTO, July 10th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant-Governor in Council :—

That the sum appropriated for the sub-service of "Superannuated Teachers" is exhausted, and as it is necessary that the allowances of worn-out teachers should all be paid without delay, the undersigned respectfully recommends that authority be given under the Act 49 Vic., cap. 4, sec. 20, for appropriating a further sum of \$2,500 to meet the payment of attached schedule, amounting to \$2,255.50, and an approximate of allowances still due.

The amount asked for above present schedules to be placed to the credit of the Provincial Treasurer to meet further payments during year as required.

(Sd.) G. W. ROSS,
Minister of Education.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, July 13th, 1895.

SIR,—I beg to enclose herewith, for the approval of the Treasury Board, a recommendation from the Education Department for the issue of an order in favor of the Honorable the Provincial Treasurer for the sum of twenty-five hundred dollars (\$2,500), to pay certain allowances to superannuated teachers.

Cheques for above allowances to be issued on presentation of certificates from the Education Department.

Your obedient servant,

O. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Minister of Education, dated the 10th day of July, A.D., 1895, the Treasury Board doth hereby, under the provisions of R.S. O., 1887, Cap. 21, Sec. 20, recommend that a warrant for the sum of two thousand five hundred dollars (\$2,500) be issued in favor of the Honorable the Provincial Treasurer, to pay certain allowances to superannuated teachers, the appropriation for such service having become exhausted, two thousand two hundred and fifty five dollars and fifty cents (\$2,255.50) to meet the present schedule, and the balance to be placed to the credit of the Provincial Treasurer to meet further payments during the year as required.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

THE HONORABLE,
The Treasurer.

Legislation—Printing and Binding..... 562.00

QUEENS PRINTER'S OFFICE.

TORONTO, July 18th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant Governor in Council :—

That the appropriation for Legislative Printing and Binding has been exhausted, owing to the large amount of printing in connection with the late session of the Legislative Assembly.

The undersigned, therefore, requests that authority be given the Honorable the Provincial Treasurer, under the Act R. S. O., 1887, Cap. 21, Sec. 20, to pay the attached account, viz., \$562.00.

Your obedient servant,

(Sd.) L. K. CAMERON,

QUEEN'S Printer.

C. H. SPROULE, Esq.,

Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE.

TORONTO, July 19th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Queen's Printer for the payment of the sum of five hundred and sixty-two dollars, to Messrs. Copp Clark & Co., for maps furnished for the report of the Bureau of Mines.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,

Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of L. K. Cameron, Esquire, Queen's Printer, dated the 18th day of July, A.D., 1895, the Treasury Board doth hereby, under the provisions of R. S. O., 1887, Cap., 21, Sec. 20, recommend that a warrant for the sum of five hundred and sixty-two dollars (\$562.00) be issued in favor of Messrs. Copp, Clark & Co. for maps furnished for the report of the Bureau of Mines, the appropriation for Legislative Printing and Binding having become exhausted.

Certified,

J. LONSDALE CAPREOL

Clerk, Treasury Board.

Legislation—Library..... 611.66

LEGISLATIVE LIBRARY.

TORONTO, July 17th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant Governor in Council :—

That the appropriation for the Library has been exhausted in the general expenditure for Legislative purposes, although it is intact, in so far as it has not been used for the Library.

The undersigned, therefore, requests that authority be given the Honorable the Treasurer, under the Act R. S. O., 1887, Cap. 21, Sec. 20, to pay the account herein attached and recommended for payment, amounting to \$436.66.

Also to pay the account herein attached and recommended for payment, amounting to \$175, for a special purchase under Order-in-Council, dated July 8th, 1895, from Houghton, Mifflin & Co.

I have the honor to be, Sir,

Your obedient servant,

W. T. R. PRESTON,
Librarian.

C. H. SPROULE, Esq.,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE.

TORONTO, July 22nd, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Librarian, Legislative Assembly, for payment of accounts for books amounting to \$611.66, the general appropriation for Legislation under the Supply Bill having been exhausted.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of W. T. R. Preston, Esquire, Librarian, Legislative Assembly, dated the 17th day of July, A.D. 1895, the Treasury Board doth hereby under the provisions of R. S. O. 1887, Cap. 21, Sec. 20, recommend that a warrant for the sum of six hundred and eleven dollars and sixty-six cents. \$611.66) be issued in favor of the Honourable the Treasurer, to pay for certain books purchased for the Legislative Library, the appropriation for Legislation having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk Treasury Board.

Legislation—Printing and Binding.....8,500.00

QUEEN'S PRINTER'S OFFICE,

TORONTO, September 24th, 1895.

The undersigned respectfully reports to His Honour, the Lieutenant-Governor in Council :—

That the appropriation for Legislative Printing has become exhausted, for the reason set forth in my report of the 26th of June last.

The statutes referred to in that report are now all completed, and there is due the contractors the sum of \$8,500, which amount I herewith present a certificate for.

The undersigned therefore requests that authority be given the Honourable the Provincial Treasurer, under the Act R. S. O. 1887, Cap. 21, Sec. 20, to pay the accompanying certificate, viz : \$8,500.

Your obedient servant,

L. K. CAMERON,
Queen's Printer.

C. H. SPROULE, ESQ.,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, September 24th, 1895

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Queen's Printer for a further payment (see Treasury Board order dated June 26th) of eight thousand five dollars on account of Legislative Printing.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Queen's Printer, dated the 24th day of September, A.D. 1895, the Treasury Board doth hereby under the provisions of Section 20, Cap. 21, R. S. O. 1887, recommend that a warrant for the sum of eight thousand five hundred dollars, (\$8,500.) be issued in favor of Messrs. Warwick Bros. & Rutter, on account of work performed under their contract for legislative printing and binding, as per the certificate of the Queen's Printer, the appropriation for said service having become exhausted.

Certified,

J. LONSDALE CAPREOL,

Clerk Treasury Board.

Public Buildings—Muskoka District.....64 78

DEPARTMENT OF PUBLIC WORKS,

TORONTO, October 17th, 1895.

The undersigned begs to report to His Honour the Lieutenant-Governor in Council :—

That he has approved for payment a contract certificate against the appropriation for Lock-up and Registry Office at Bracebridge, in favor of J. R. Eaton, Contractor, for the sum of..... \$715.73

That the unexpended balance of the said appropriation is but 650.95

Leaving a balance unprovided for of..... 64.78

The undersigned therefore recommends that the requisite authority be given under the Act R. S. O. 1887, Cap. 21, Sec. 20, for cheque to issue in favor of J. R. Eaton for such unprovided for balance.

(Sd.) W. HARTY,

Commissioner.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, October 17th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation for payment under authority of 49 Vic. Cap. 4, Sec. 20, of a balance of \$64.78 due the contractor for work done at Lock-up and Registry Office, Bracebridge.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Commissioner of Public Works dated the 17th day of October, A.D. 1885, the Treasury Board doth hereby pursuant to the provisions of Section 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of sixty four dollars and seventy eight cents, (\$64.78) in favor of J. R. Eaton, [contractor for the erection of the Registry Office and Lock-up at Bracebridge, the appropriation for same having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

Education :—Departmental Examinations.....2,000.00

EDUCATION DEPARTMENT,
TORONTO, October 18th, 1895.

The undersigned respectfully reports to His Honor, the Lieutenant-Governor in Council:—

That the sum appropriated for the sub-service of “Departmental Examinations” is insufficient for the current year, and that after providing for the payment of salaries to end of the year, necessary printing, etc., a further amount of \$2,000 is required for this sub-service.

The undersigned therefore recommends that authority be given under the Act 49 Vic., Cap. 4, Sec. 20, for appropriating a further sum of \$2,000 to be placed to the credit of the Honorable the Provincial Treasurer, to meet the deficiency.

(Sd.) G. W. ROSS,
Minister of Education.

PROVINCIAL AUDITOR'S OFFICE.

TORONTO, October 3rd, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, an application from the Education Department, for authority to overdraw the appropriation for Departmental Examinations, to the extent of two thousand dollars (\$2,000.)

Cheques in connection with above to be issued in the regular way on presentation of proper certificates of payments due.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK.

Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honourable the Minister of Education, dated the 18th day of October, A. D. 1895, the Treasury Board doth hereby under the provisions of Sec. 20, Cap, 21, R. S. O. 1887, authorize the issue of a warrant for the sum of two thousand dollars (\$2,000,) in favor of the Honourable the Treasurer to meet further payments chargeable to the sub-service "Departmental Examinations" which has become exhausted. Cheques for such payments to be issued on presentation of the proper certificates.

Certified,

J. L. CAPREOL,
Clerk Treasury Board.

Public Institutions Mtce.—Brockville Asylum 1,833 30

INSPECTOR OF ASYLUMS' OFFICE,
TORONTO, 25th October, 1895.

SIR,—I beg to report that the unexpended balance of the appropriation on Maintenance account, for the Brockville Asylum is insufficient to pay the accounts due for the current month, and that the sum of \$1,833.30 will be required for that purpose.

The expenditure for the expired portion of the year has been limited to the lowest possible point, consistent with the efficiency of the institution.

There is a considerable quantity of supplies now in store, which will be required before a new appropriation can be had, and which have been purchased in bulk, the economy of such course being obvious.

This, together with many lesser but unforeseen requirements in connection with the inception of a new institution, has caused the over expenditure.

I would therefore recommend the issue of a Treasury Board warrant, under R. S. O. 1887, Cap. 21, Sec. 20, for the above named amount.

Your obedient servant,

R. CHRISTIE,
Inspector.

C. H. SPROULE, Esq.
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, October 26th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from Mr. Inspector Christie, for payment of accounts connected with the maintenance of Brockville Asylum for the current month, and amounting to \$1,833.30.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,

Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of R. Christie, Esquire, Inspector of Asylums, dated the 25th day of October, A. D. 1895, the Treasury Board doth hereby under the provisions of Sec. 20, Cap. 21, R. S. O., 1887, authorize the issue of a warrant for the sum of one thousand eight hundred and thirty-three dollars and thirty cents (\$1,833.30) in favor of the Honorable the Treasurer, for the payment of the accounts for the current month, in connection with the Asylum for Insane, Brockville, the appropriation for the maintenance of the said institution having become exhausted.

Certified,

J. LONSDALE CAPREOL,

Clerk Treasury Board.

Education—Public School Leaving Examinations..... 1,738.81

EDUCATION DEPARTMENT,

TORONTO, November 20th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant-Governor in Council :—

That the sum appropriated for the sub-service of "Public School Leaving Examinations" is exhausted, and as it is necessary that all the grants due the schools for successful candidates at such examinations should be promptly paid, the undersigned respectfully recommends that authority be given under the Act 49 Vic. Cap. 4, Sec. 20, for appropriating a further sum of \$1,738.81 to meet the payment of accompanying schedules for \$1,735, and small printing accounts amounting to \$3.81, now passing through the Queen's Printer's Office.

(Sd.)

G. W. ROSS,

Minister of Education.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, November 23rd, 1895.

SIR.—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Education Department, for payment of accounts connected with "Public School Leaving Examinations" amounting to \$1,738.81.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Minister of Education, dated the 20th day of November, A. D. 1895, the Treasury Board doth hereby under the provisions of Sec. 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of one thousand seven hundred and thirty-eight dollars and eighty-one cents, (\$1,738.81) in favor of the Honorable the Treasurer, for the payment of accounts connected with "Public School Leaving Examinations" the appropriation for the said service having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk Treasury Board.

Legislation—Printing and Binding	1,945 61
--	----------

QUEEN'S PRINTER'S OFFICE,
TORONTO, November 26th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant-Governor in Council :—

That the appropriation for Legislative Printing and Binding has become exhausted, for reasons set forth in my report of June 26th last.

The accompanying certificate for \$1,945.61, which closes the account with the contractors for all legislative work of last session, is herewith presented.

The undersigned therefore requests that authority be given the Honorable the Provincial Treasurer under the Act R.S.G., 1887, Cap. 21, Sec. 20, to pay the accompanying certificate, viz: \$1,945.61.

Your obedient servant,

L. K. CAMERON,
Queen's Printer.

C. H. SPROULE, Esq.,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, November 27th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board a recommendation from the Queen's Printer for payment of the sum of \$1,945.61, on account of contract for Legislative Printing and Binding.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of L. K. Cameron, Esquire, Queen's Printer, dated the 26th day of November, A.D. 1895, the Treasury Board doth hereby, under the provisions of Section 20, Cap. 21, R. S. O., 1887, authorize the issue of a warrant for the sum of one thousand nine hundred and forty-five dollars and sixty-one cents (\$1,945.61) in favor of Messrs. Warwick Bros. & Rutter, contractors for the Parliamentary Printing, etc., the appropriation for said service having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

Public Buildings—Brockville Asylum..... 6,172 59

DEPARTMENT OF PUBLIC WORKS, ONTARIO,
TORONTO, November 19th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant-Governor in Council :—

That on the 18th day of September last an Order in Council was passed for the issue of a warrant in favor of James J. Henderson, for the amount of the Arbitration Award of \$8,395.50 for lands expropriated and taken for the purposes of the Brockville Asylum for the Insane, and that the amount of said award was charged against the appropriation for the construction and completion of said Asylum buildings :

That no amount had been placed in the Appropriations for 1895 for the purpose of paying for the land in question ; and consequently the appropriation is exhausted, while of the 10 per cent. drawback on contract held by the department until the completion of the works by the contractors, Messrs. Garson, Purcer & Co. \$8,836.38 is yet unpaid ; and a small amount may also be due the contractors upon the final adjusting of the accounts.

A clause in the contract specifications provides that "The Commissioner of Public Works reserves the right to retain a sufficient sum to meet any liabilities incurred by the contractors on account of the work, until satisfied that settlement of such liabilities has been made."

Under the provision of this clause sub-contractors and other claims have been fyled against the contractors. The greater portion of these have been adjusted, to a total of \$8,433.56 and full releases from the claimants have been fyled in the Department.

Upon this \$8,433.56 of adjusted claims, there has been paid to	
the Contractors on account, the sum of.....	\$2,260 97
A further payment is now due to the Contractors, Messrs. Gar-	
son, Purcer & Co., of the sum of.....	5,967 14
And to Cossitt Bros, on account of Garson, Purcer & Co. the	
sum of	205 45

In all the adjusted total of	\$8,433 56
------------------------------------	------------

The undersigned therefore recommends that the requisite authority be given under the Act R. S. O., 1887, Cap. 21, Sec. 20 for cheques to issue in favor of the above named.

Garson, Purcer & Co. for.....	\$5,967 14
Cossitt Bros., of Brockville	205 45

(Sd.) WM. HARTY,
Commissioner.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Commissioner of Public Works, dated the 19th day of November, A.D. 1895. The Treasury Board doth hereby pursuant to the provisions of section 20, cap 21, R. S. O., 1887, authorise the issue of a warrant for the sum of six thousand one hundred and seventy-two dollars and fifty-nine cents in favor of the Honorable the Treasurer to meet sundry payments in connection with the contract for the Insane Asylum, Brockville, the appropriation for said service having become exhausted, cheques to be issued on the presentation of properly certified accounts.

Certified,

J. LONSDALE CAPREOL

Clerk, Treasury Board.

Public Institutions Mtce.—Brockville L.A. 3,616 77

INSPECTOR OF ASYLUMS' OFFICE,

TORONTO, November 27th, 1895.

SIR,—I find that the expenditure on maintenance account at Brockville Asylum, for the past month, amounts to \$3,616.77 the accounts for which will be forwarded in due time.

The reasons for an over-expenditure were stated in my report of the 25th ultimo, and I have to request that under the authority of R. S. O. 1887, Cap. 21, Sec. 20, you will submit the accounts and this report to the Treasury Board, with a view to the payment of the amount so expended.

Your obedient servant,

R. CHRISTIE,

Inspector.

C. H. SPROULE, Esq.,
Provincial Auditor.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, November 28th, 1895.

SIR,—I beg to forward herewith an application from Mr. Inspector Christie for a Treasury Board order, authorizing payment of account incurred for maintenance of the Brockville Asylum for the current month.

If payment is approved, order might be issued for full amount \$3,616.77 in favor of the Honorable the Provincial Treasurer.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of R. Christie Esquire, Inspector of Asylums, dated the 27th day of November, A.D. 1895, the Treasury Board doth hereby under the provisions of Section 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of three thousand six hundred and sixteen dollars and seventy-seven cents (\$3,616.77) in favor of the Honorable the Treasurer for the payment of the accounts for the current month, in connection with the Asylum for Insane Brockville, the appropriation for the maintenance of said Institution having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk Treasury Board.

Public Buildings—Brockville Asylum 976 88

DEPARTMENT OF PUBLIC WORKS,
TORONTO, December 6th, 1895.

The undersigned begs to report to His Honor the Lieutenant-Governor in Council.

That the capital appropriation for the Brockville Asylum is exhausted, and the following account is unpaid, namely :—

Messrs Brown & Fraser, Barristers, Brockville, being the taxed costs in connection with the expropriation of certain property belonging to J. J. Henderson and Sophia Young, the sum being required for the Asylum for Insane, Brockville, \$976.88.

The undersigned therefore recommend that authority be given under the Act R. S. O., 1887, Cap. 21, Sec. 20, for cheque to issue in favor of the said firm, and for the said sum above named.

(Sd.) W. HARTY,
Commissioner.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, December 7th, 1895.

SIR,—I beg to enclose herewith for the approval of the Treasury Board, a recommendation from the Department of Public Works, for payment of an account of Messrs Brown & Fraser, chargeable to Brockville Asylum, capital account.

Your obedient servant,
C. H. SPROULE,
Provincial Auditor.

THE CLERK
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Commissioner of Public Works, dated the 6th day of December, A.D. 1895, the Treasury Board, doth hereby pursuant to the provisions of Section 20, Cap. 21, R.S.O., 1887, authorise the issue of a warrant for the sum of nine hundred and seventy-six dollars and eighty-eight cents, in favor of Messrs. Brown & Fraser, solicitors, Brockville, being the amount of their taxed costs in connection with the expropriation of certain property belonging to J. J. Henderson and Sophia Young, required for the purposes of the Brockville Asylum, the appropriation for said institution having become exhausted.

Certified,
J. LONSDALE, OAPREOL,
Clerk Treasury Board.

Public Buildings—Brockville Asylum.. . . . 2,995.00

DEPARTMENT OF PUBLIC WORKS, ONTARIO.
TORONTO, December 5th, 1895.

The undersigned respectfully reports to His Honor the Lieutenant-Governor in Council :—

That the Brockville Asylum Capital account appropriation is exhausted, and the following contract and other accounts remain unpaid :

- | | |
|---|-----------|
| (1) R. H. Smart, Brockville, for hardware and other iron work and labour in connection with roads, water supply, and drainage works..... | \$ 342 00 |
| (2) Thomas Fitzgibbon, Brockville, fourth and final certificate in connection with contract for engineers' and farmers' cottages, and the carpenter shop..... | 553 00 |
| (3) The Northey Manufacturing Company, Toronto, first and final certificate for a steam pump..... | 600 00 |

THE TREASURER.

Education—Departmental Examinations 2,510.00

DEPARTMENT OF EDUCATION,

TORONTO, December 10th, 1895.

The undersigned respectfully reports to His Honor, the Lieutenant-Governor in Council :—

That the sum appropriated for the sub-service of "Departmental Examinations" is exhausted, as well as the additional amount of \$2,000 requested by Order on the Treasury Board on 27th September last. A number of the members of the Board of Examiners, the Appeal Examiners,

and a few small accounts remain unpaid, and as it is necessary that these all should be promptly paid, the undersigned respectfully recommends that authority be given under the Act, 49 Vict., Cap. 4, Sec. 20, for appropriating a further sum of \$2,510.00, to be placed to the credit of the Honorable Provincial Treasurer to meet present schedule for \$2,446.91 and some printing and other accounts sent to the Provincial Treasury.

(Sd.) GEO. W. ROSS,
Minister of Education.

PROVINCIAL AUDITOR'S OFFICE,
TORONTO, December 11th, 1895.

Sir,—I beg to enclose herewith certificate from the Education Department showing amounts due on account of Departmental Examinations, amounting to \$2,446.91.

The attached report of the Honorable the Minister of Education, requesting that authority be granted for payment of above, also asks authority for further petty payments connected with the same service, amounting to \$63.09.

Your obedient servant,

C. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Minister of Education, dated the 10th day of December, A.D. 1895, the Treasury Board doth hereby, pursuant to the provisions of Sec. 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of two thousand five hundred and ten dollars (\$2,510) in favor of the Honorable the Treasurer, for the payment of certain accounts chargeable to the sub-service "Departmental Examinations," which has become exhausted.

The Honourable
THE TREASURER,

Public Buildings—Brockville Asylum 3,598.37

DEPARTMENT OF PUBLIC WORKS, ONTARIO.

TORONTO, December 19th 1895.

The undersigned begs to report to His Honour the Lieutenant-Governor in Council, that the capital account appropriation for the Brockville Asylum is exhausted, and the following approved contract certificates and accounts are unpaid:—

(1) The Keith & Fitzsimons Co., final certificate on	
steam heating, etc.....	\$2,642 19
(2) do do acct.....	906 98
(3) F. P. Begy & Son, acct.....	24 75
(4) Canada Pipe Foundry acct.	24 45
Total	\$3,598 37

The undersigned therefore respectfully recommends that authority be given under the Act R. S. O. 1887, Cap. 21, Sec. 20, for the issue of warrants in favour of the several parties and for the respective amounts above named.

(Sd.) WM. HARTY,
Commissioner.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, December 10th, 1895.

SIR,—I beg to enclose herewith for approval of the Treasury Board, a recommendation from the Department of Public Works, for payment of accounts, chargeable to Brockville Asylum, capital account, amounting to three thousand five hundred and ninety-eight dollars and thirty-seven cents, (\$3,598.37.)

Your obedient servant,

C. E. SPROULE,
Provincial Auditor.

THE CLERK
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honourable the Commissioner of Public Works, dated the 19th day of December, A. D. 1895, the Treasury Board doth hereby pursuant to the provisions of section 20, cap. 21, R. S. O. 1887, authorise the issue of a warrant for the sum of three thousand five hundred and ninety-eight dollars and thirty-seven cents (\$3,598.37) in favour of the Honourable the Treasurer to enable him to pay the following accounts chargeable to the appropriation for the Asylum for the Insane, Brockville, which has become exhausted, namely:—

(1) Keith & Fitzsimons Coy., final certificate on steam heating, etc	\$2,642 19
(2) Keith & Fitzsimons Co. account.....	906 98
(3) F. P. Begy & Son account.....	24 75
(4) Canada Pipe Foundry account.....	24 45
Total.....	\$3,598 37

Certified,

J. LONSDALE CAPREOL,
Clerk Treasury Board.

The Honourable
THE TREASURER.

Administration of Criminal Justice in Counties..... 24,2453 5

ATTORNEY GENERAL'S DEPARTMENT,
TORONTO, December 18th, 1895.

The undersigned has the honour to report that owing to the overdraft for administration of justice in counties, the appropriation for "Miscellaneous, Criminal, and Civil Justice" has become exhausted, and that the sums mentioned in the annexed schedules, amounting to \$13,232.15, for December quarterly salaries to judicial and other officers and Crown Counsel and other accounts remain unpaid.

The undersigned further reports that owing to the abnormally large expenditures made this year on account of the administration of Criminal Justice in counties, the further sum of \$11,013.20 will be required to pay the audited and approved accounts set forth in the accompanying requisition of the auditor of Criminal Justice Accounts.

The requirements of the public service demand that provision should be made for the payment of the said sums before the close of the current year.

Under the circumstances the undersigned respectfully recommends that for the purpose aforesaid, and pursuant to the provisions of Section 20, Cap. 21, R. S. O. 1887, a warrant for the sum of \$24,245.35 be issued in favour of the Honourable the Treasurer.

(Sd.)

O. MOWAT,

Attorney-General.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, December 18th, 1895.

SIR,—I beg to enclose herewith an application from the Attorney General's Department for authority for payment under 40 Vic., Cap. 4, section 20, of accounts connected with the administration of justice in counties, amounting to \$24,245.35.

Your obedient servant,

O. H. SPROULE,

Provincial Auditor.

THE CLERK.

Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honourable the Attorney-General, dated the 18th day of December, A.D. 1895, the Treasury Board doth hereby, pursuant to the provisions of Section 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of twenty-four thousand two hundred and forty-five dollars and thirty-five cents (\$24,245.35) in favor of the Honourable the Treasurer, to enable him to pay the accounts mentioned in the schedules submitted herewith, chargeable to the appropriation for "Miscellaneous, Criminal, and Civil Justice," which has become exhausted.

Certified,

J. LONSDALE CAPREOL,

Clerk Treasury Board.

Public Institutions Maintenance—Brockville Asylum..... 3,199.38

INSPECTOR OF PRISON'S OFFICE,

TORONTO, December, 23rd, 1895.

SIR,—The accounts for the maintenance of the Brockville Asylum for the past month amount to the sum of \$3,199.38.

The expenditure has been limited to the requirements of the institution, due regard being had to the efficiency of the service. And I beg to request that you will submit this report to the Treasury Board under authority of the Statute, with a view to the payment of the above amount, made necessary by the overdraft reported in my letter of October 25th, 1895.

I have the honor to be, Sir,

Your obedient servant,

(Sd.) R. CHRISTIE,
Inspector.

O. H. SPROULE, Esq.,
Provincial Auditor,
Toronto.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, December 23rd, 1895.

SIR,—I beg to enclose herewith for approval of the Treasury Board, a recommendation from Mr. Inspector Christie for payment of the December Maintenance Accounts of Brockville Asylum, amounting to \$3,199.38.

Your obedient servant,

O. H. SPROULE,
Provincial Auditor.

THE CLERK,
Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of Mr. Inspector Christie, dated the 23rd day of December, A.D., 1895, the Treasury Board doth hereby, pursuant to the provisions of Section 20, Cap. 21, R. S. O. 1887, authorise the issue of a warrant for the sum of three thousand one hundred and ninety-nine dollars and thirty-eight cents (\$3,199.38) in favor of the Honourable the Treasurer, to enable him to pay the December Maintenance Accounts of the Asylum for the Insane, Brockville, the appropriation for said service having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk Treasury Board.

THE Honourable
THE TREASURER.

Public Institutions Maintenance—Central Prison..... 5,140.59

INSPECTOR OF PRISON'S OFFICE,

TORONTO, December, 23rd, 1895.

SIR,—I beg to report that in consequence of the continued and increasing high average of the prison population for the present year, the maintenance appropriation for the Central Prison is exhausted, and the official salaries, and accounts for supplies amounting in all to \$5,140.59 are unprovided for.

I would therefore recommend that authority be given under the Act R. S. O. 1887, Cap. 21, Sec. 20, for payment of the above amount.

I have the honor to be, Sir,

Your obedient servant,

(Sd.) JAMES NOXON.

Inspector

C. H. SPROULE, Esq.,

Provincial Auditor,

Toronto.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, December 23rd, 1895.

SIR,—I beg to enclose herewith, for approval of the Treasury Board, a recommendation for Mr. Inspector Noxon, for Payment of the December Maintenance Accounts of the Central Prison, amounting to \$5,140.59.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,

Treasury Board.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of Mr. Inspector Noxon, dated the 23rd day of December, A. D. 1895, the Treasury Board doth hereby, pursuant to the provisions of Section 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of five thousand one hundred and forty dollars and fifty-nine cents (\$5,140.59) in favour of the Honourable the Treasurer

to enable him to pay the official salaries and accounts for supplies for the month of December in connection with the Central Prison, the appropriation for maintenance of said institution having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

The Honourable
THE TREASURER.

Public Buildings—Brockville Asylum 424.89

DEPARTMENT OF PUBLIC WORKS,
TORONTO, December 30th, 1895.

The undersigned begs to report to His Honour the Lieutenant-Governor in Council :—

That the capital appropriation for the Brockville Asylum is exhausted, and the following account is unpaid :—

E. J. Reynolds, Esq., Barrister, Brockville, for bill of costs
in connection with the expropriation of certain lands
belonging to J. J. Henderson, for the Brockville Asylum ; said account having been certified by the taxing
officer of the Court\$ 424 89

The undersigned therefore recommends that authority be given under the Act R. S. O., 1887, Cap. 21, Sec. 20, for a cheque to issue in favour of said E. J. Reynolds, for the sum named.

(Sd.) WM. HARTY,
Commissioner.

MINUTE OF THE TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Honorable the Commissioner of Public Works, dated the 30th day of December, A. D. 1895, the Treasury Board doth hereby, pursuant to the provisions of Section 20, Cap. 21, R. S. O., 1887, authorize the issue of a warrant for the sum of four hundred and twenty-four dollars and eighty-nine cents (\$424.89) in favour of E. J. Reynolds, Brockville, being the amount of his taxed costs in connection with the expropriation of certain property required for the purposes of the Asylum for the Insane, Brockville, the appropriation for said institution having become exhausted.

Certified,

J. LONSDALE CAPREOL,
Clerk, Treasury Board.

The Honourable
THE TREASURER.

Administration of Criminal Justice in Counties 11,177.41

LICENSE BRANCH,

TORONTO, December 30th, 1895.

SIR,—I herewith transmit to you accounts payable on account of the administration of criminal justice in counties, etc., amounting to \$11,177.41, which have been duly audited, and are now recommended for payment in the usual course, but owing to the abnormally large expenditures made this year on account of the administration of criminal justice in counties the usual appropriation for this service has become exhausted, and therefore I have to request, as provided in Section 20 of Cap. 4 of 49 Victoria, that you will place the subject of the payment of these accounts, and the securing of a sufficient amount therefor, before the Treasury Board, so that there may not be any undue delay in transmitting to the counties, etc., the sums due them as per the audit made.

I have the honour to be, Sir,

Your obedient servant,

(Sd.) HENRY TOTTEN.

C. H. SPROULE, Esq.,

Provincial Auditor,

Parliament Buildings.

PROVINCIAL AUDITOR'S OFFICE,

TORONTO, January 7th, 1896.

SIR,—I beg to enclose herewith an application from the Treasury Department, Criminal Justice Accounts Division, for authority for payment, under 49 Vic., Cap. 4, Sec. 20, of accounts connected with the administration of justice in counties, amounting to \$11,177.41.

Your obedient servant,

C. H. SPROULE,

Provincial Auditor.

THE CLERK,

Treasury Board.

MINUTE OF TREASURY BOARD ON MATTERS REFERRED TO THEM FOR
CONSIDERATION.

Upon consideration of a report of the Auditor of Criminal Justice Accounts, dated the 30th day of December, A. D. 1895, the Treasury Board doth hereby pursuant to the provisions of section 20, Cap. 21, R. S. O. 1887, authorize the issue of a warrant for the sum of eleven thousand one hundred and seventy-seven dollars and forty-one cents (\$11,177.41) in favor of the Honorable the Treasurer, to enable him to pay the amounts mentioned in the accompanying schedule, chargeable to the appropriation for "Miscellaneous Criminal and Civil Justice" which has become exhausted.

SPECIAL WARRANT ISSUED UNDER AUTHORITY OF 49
VIOT., CAP. 4, SEC. 20.

The undersigned has the honor to report that the sum of \$80,000 appropriated by the Supply Bill of last Session, assented to on the 5th day of May, 1894, to defray the expenses of "Legislation" "Public Institutions Maintenance" and for salaries of the Officers of the Government and Civil Service for the month of January, 1895, has become exhausted. As the Legislative Assembly has not yet been called for the despatch of business, some time will elapse before a vote of credit can be obtained, and in the meantime it is necessary and urgent, that further provisions should be made for the above mentioned services to the following extent :—

Civil Government.....	\$100,000
Legislation.....	25,000
Public Institutions Maintenance	150,000

The undersigned further reports that in accordance with the provisions of the said Supply Bill all balances remaining unexpended after the 20th day of January, 1895, shall lapse and be written off, and it is urgently and immediately necessary that provision should be made to defray expenses in connection with the below mentioned services as follows, namely :

Administration of Justice.....	\$25,000
Education.....	25,000
Agriculture.....	10,000
Crown Lands Dept. Expenditures.....	20,000
Public Works and Buildings.....	20,000
Repairs and Maintenance Public Buildings..	10,000
Miscellaneous Expenditures.....	15,000

The undersigned therefore respectfully recommends that pursuant to the provisions of subsection 2 of section 9 of Cap. 20, R. S. O. 1887, a special warrant for the sum of \$400,000 be issued by His Honor the Lieutenant-Governor in Council, to be placed by the undersigned to a special account against which cheques may be issued from time to time as may be required for the payment of expenditures in connection with the services above specified.

(Sd.) R. HARCOURT,
Provincial Treasurer.

21st January, 1895.

Copy of an Order-in-Council approved by His Honour the Lieutenant-Governor the 25th day of January, A.D. 1895.

The Committee of Council have had under consideration the reports of the Honourable the Attorney-General, the Honourable the Commissioner of Crown Lands, the Honourable the Minister of Education, the Honourable the Provincial Secretary, the Honourable the Minister of Agriculture and the Honourable the Commissioner of Public Works, dated respectively 21st January, 1895, also the report of the Honourable the Treasurer of the same date, wherein he states, that the sum of \$80,000 appropriated by the Supply Bill of last Session, assented to on the 5th day of May, 1894, to defray the expenses of Legislation, Public Institutions, Maintenance, and for salaries of the Officers of the Government and Civil Service for the month of January, 1895, has become exhausted, and as the Legislative Assembly has not been called for the despatch of business some time will elapse before a vote of credit can be obtained, and in the meantime, it is necessary and urgent that further provision should be made for the above mentioned services to the following extent, namely :—

Civil Government.....	\$100,000
Legislation.....	25,000
Public Institutions Maintenance.....	150,000

The Treasurer further states that in accordance with the provisions of the said supply bill all balances remaining unexpended after the 20th day of January last lapsed, and have been written off, and it is urgently and immediately necessary that provision should be made to defray expenses in connection with the below mentioned services as follows, namely :—

Administration of Justice.....	\$25,000
Education	25,000
Agriculture.....	10,000
Crown Lands Dept. Expenditures.....	20,000
Public Works and Buildings.....	20,000
Repairs and Maintenance, Public Buildings.	10,000
Miscellaneous Expenditures.....,.....	15,000

The Treasurer recommends that in pursuance of subsection 2 of Section 9 of Cap. 21, R. S. O. 1887, a special warrant for the sum of four hundred thousand dollars (\$400,000) be issued by Your Honour, to be placed by him to a special account against which cheques may be issued from time to time as may be required for the payment of expenditures in connection with the services above specified.

The Committee concur in the recommendation of the Honourable the Treasurer and advise that the same be acted upon.

Certified,

J. LONSDALE GAPREOL,
Asst. Clerk Executive Council.

The Honourable,
THE TREASURER.

Respectfully submitted,

C. H. SPROULE,
Provincial Auditor.

NOTE.—By R. S. O. c. 116, s. 136 (3), the salaries of the Local Masters of Titles are to be "fixed from time to time with reference to the amount or probable amount of the business." Accordingly, the amount each year is fixed with reference to the business of the preceding year, and to the fees collected by them. All fees are payable into the Consolidated Revenue Fund. These fees aid in fixing the value of the work done at the request of private parties after registration of patents. The registration of patent is made at the request of the Government, free of charge to the patentees, unless where they have encumbered their land. The patents thus registered during 1895 were, at Sault Ste. Marie, 62; Parry Sound, 127; Bracebridge, 68; Port Arthur (no return); North Bay, 57; Rat Portage, 328. The fees collected from the parties in 1895 were, Sault Ste. Marie, \$650 10; Parry Sound, \$341.93; Bracebridge, \$162.10; Port Arthur, (return not yet received); North Bay, \$239 50; Rat Portage \$574; St. Thomas, \$13.40.
